Has she done it, John?" distance wire; trying also-and also in vain-to forget the recent clash and break with Verda Richlander. was jiggling the switch of the desk phone for the twentieth time when a nervous step echoed in the corridor and the door opened to admit William Starbuck. There was red wrath in the mine owner's ordinarily cold eyes perfectly well that I was going to do when he flung himself into a chair and eased the nausen of his seul in an out-

burst of picturesque profanity. "The jig's up-definitely up, John," he was saying, when his speech became lucid enough to be understood. "We know now what Stanton's 'other string' was. A half hour ago, a deputy United States marshal, with a posse big enough to capture a town, took possession of the dam and stopped the work. He says it's a court order from Judge Lorching at Red Butte, based on the claims of that infernal paper railroad!"

Smith pushed the telephone aside, "But it's too late!" he protested. "The dam is completed; Williams phoned me before I went to dinner. All that remains to be done to save the charter is to shut the spiliways and let the water back up so that It will flow into the main ditch ;"

"Right there's where they've got us!" was the rasping reply. "They won't let Williams touch the spillway

CHAPTER XXIV.

A Strong Man Armed.

Smith put his elbows on the desk and propped his head in his hands, "He gave me to understand, very It was not the attitude of dejection; dam?" with put his coat on, and together "He gave me to understand, very it was not the attitude of dejection; plainly, that he had done something; it was rather a trancelike rigor of table in the main cafe. that there was a sensation is prespect concentration, with each and all of the slack, Cinty says." While they were giving their dinner for all Brewster. He was so, exult- newly emergent powers once more the Starbuck came in and joined antly triumphant that it fairly fright springing alive to answer the battle but I shall need Williams, Now anand Smith was glad. (TO BE CONTINUED.)

Keeps Itself in Repair and Constantly Maintains an Even Temperature Throughout Four Seasons.

To burn the fuel in a gasoline engine it must be carburetted or mixed with air and an electric spark must be applied to ignite the mixture. In the human engine the process is much more elaborate, since a very wine vat riety of crude foods is taken, refined, reduced to fuel and burned slowly. A gasoline engine may by termed a quick-combustion, high-temperature engine, while the human machine is a boards, the signal phones and the low-temperature and slow-combastion engine, which not only produces energy from its food, but lubricates itself. keeps itself in repair and constantly maintains an even temperature throughout the four sensons,

A man could not digest gasoline, nor could a gasoline engine run on butter. Nevertheless, the two classes and functions merge into each other. Science shows how alcohol is a curlous illustration of this fact. An internal combustion engine could be run on alcohol and it is known that this fluid can be burned in the human body also, producing a vast amount of vielent energy which is equivalent to that obtained in a gasoline engine when the throttle is pulled wide open and there is no lond to carry. Physicians say that drunkenness is, in effect, racing the human engine beyond speed

Old "Sugar Makin"."

It must have been a busy, hard time for our elders, those old sugar makin' days, but we never heard them complain. Maybe they liked It, hard work and all, as a break in the monotony of a long, dull winter on the farm that was away back from the main traveled road. The old sugar house disappeared long ago, and the grand old trees are gone, too. The big level cornfield of today gives no hint of past joys, but some of us can close our eyes and reconstruct grandfather's farm, and when we have put the old grove back in its proper place, with the road winding up through it, past the old sugar house, to the quaint old steeproofed house with its ever waiting look of welcome, and when the picture is complete, along with all the other joys of going to grandfather's, we can even taste the taste of real molasses that came from trees,-Indianapolis News.

Candles Vs. Electricity. The Society for Electrical Development, anxious to encourage a wider use of electricity for lighting, has prepared figures showing it is much cheap- | 916.000.

er than candles or kerosene. A recent test of six candles showed that for 1 cent only 2.68 candle-power hours were obtained. If electricity for hour a 20-watt lamp can be lighted for for an eight-hour day. Wiremen em- white from the other. lighting costs 9 cents for a kilowatt 50 hours for 9 cents. The efficiency of ployed on a monthly basis are ina 20-watt incandescent is a candlepower for 1.17 watts. Thus a 20-watt lamp will provide about 17 candle power. It will burn 50 hours for 9 cents, or 850 candle-power hours will cost 9 cents. One cent will buy 94.4 I candle-power hours, or 85 times as one night)—the night I much light as can be obtained from a

brought about in the United States by as is used in the regular operations of the war is recorded the entrance of women into railroading. From doing flag duty at grade-crossings to wiping 50 students and a passageway up to the monster locomotives and operating lathes in machine shops, girls are replacing old men and young men.

While the first call for the girl railroader was to replace men who will take up arms, with the bars down they are showing efficiency in brunches heretofore employing old men those crippled in the service of the companies. Especially is this true in the signal department.

The new school of telegraphy has recently been transferred from Bedford, Pa., to Philadelphia by the Pennwomen as well as men. More than 200 students are now taking the course, The only requirements for entrance them in the school. are that the applicant be between the you fill out the remainder of the orand geography.

Have Miniature Line.

Among the first changes being | done with the regular equipment such trains, telephones and telegraphs. There are divisions in this system for the center enables the instructor to move from one to another for individual attention.

Three-Track System. At present the system is a threetrack one, two regular lines and a continuous switch track in the center, just like many sections of the real railroad are built. Shortly there will be added a fourth track, which will make it the counterpart of the company's fourtrack trunk lines.

Another advantage which is given to the students is the opportunity to hear sylvania railroad. When the transfer the messages and reports which go was made, the course was opened to over the real wires of the company, as the lines have been tapped and receiving apparatus set up in connection with

Telegraphy itself is no easy subject ages of seventeen and twenty-five and to master, but the equipment of the possess good sight, hearing and a fair school contains special arrangements knowledge of English, mathematics to enable the ready acquisition of speed and accuracy on the part of the students.
