War Department Shows

Procedure in Notifying

Relative of Casualties

Relatives of soldiers named in casualty lists forwarded from France ordinarily are notified within 24 hours after receipt of the lists according to a statement authorized by the War Department.

A copy of the roster of each contingent

sailing to join the Expeditionary Forces is filed in card index fashion, each card bearing the name of one soldier, his organization, and the name and address of parent or other relative or friend designated by him to be notified in emergency.

While relatives are generally in receipt

of information within 24 hours after the cables are received, delays are sometimes due to clerical errors caused by the fact that names must pass through so many hands in France and in America, incorrect emergency addresses turned in by soldiers removal of families to addresses other than those listed, and the occasional necessity for cabling back to Gen. Pershing to verify a name or to obtain an address.

Aside from these four causes of delay

the only reason for the failure of relatives to receive word at once is military consideration. Gen. Pershing may at his discretion, withhold a casualty list until he is positive it will have no military value to the enemy.

Nearly All Artillery for American Army

to be Motorized

Motorization of field artillery will be carried to a greater extent in the American Army than in any other army engaged in the war. Not only will a far greater amount of motor equipment be provided in proportion to the strength of the Army, but it will be used for work where armies now in the field depend solely upon horse power and man power.

The Ordnance Department has succeeded

in developing such types of tractors that, exclusive of the heaviest field artillery mounted on railroad carriages all American artillery will be motorized, with the exception of some of the 3-inch-gun batteries. The problem of motorization of field artillery is a difficult one, which explains why it has not been carried to a greater extent than has been the case with the armies that have been fighting in Europe for the last three

years.

The possible output of tractors for the transport of field artillery in the United States is practically unlimited whereas the supply of horses is at present limited and is becoming more so each month.

Soldiers Are Transferred to Meet Particular Needs

Nearly 240,000 transfers of men from one unit to another have been made in Army camps as a result of occupational qualifications determined by investigations by the War Department committee on classification of personnel. Recently about 40,000 transfers have taken place each week.

Through the committee organizations

have been built up in all Army camps, by which enlisted men and commissioned officers are classified according to occupational qualifications. In some camps, where as many as 2,500 men are received daily, forces of 200 interviewers are employed to ascertain full information regarding each man's occupation, education, experience, and special qualifications.

More Railway Engineers to go to France

When the 5 new regiments and 19 battalions of railway engineers now being organized are put on duty there will be 50,000 Americans engaged in railroad construction and operation in France.

After the United States entered the

war one of the first requests transmitted to this Government by the French mission was for assistance in strengthening the French railways. Nine regiments of railway engineers whose organization was started before Gen. Pershing sailed, were in France by August 1917. Six of them have been engaged in construction work, building and rebuilding railroads, building docks, and rearranging terminal facilities. The other three regiments have been engaged in operation, and some of the railway troops have been on the fighting line. The additional troops will be used partly for construction and maintenance and partly for operation.

A total of \$160,000,000 has been spent on railway materials alone. Included in the purchases are 1,727 locomotives, 22, 630 freight cars and 359,000 tons of steel rails.

Incomplete returns from 25 states

show that nearly 3,400,000 women have registered for war work under the Woman's Committee of the Council of National Defense. The 12-cylinder Liberty motor, according to a statement by the War Department weighs 825 pounds and develops 450 horsepower, or a weight of 1.8 pounds per horsepower. The gasoline consumption is approximately 0.45 pound per horsepower hour. The standardized "type B" truck has been officially adopted as the standard heavy-duty cargo truck for use by the Army in all its departments requiring this capacity truck. A large number have been ordered and it is expected the first 10,000 will be completed about August 1, 1918. There is no discrimination of any kind between soldiers who are not citizens of the United States and the
