Weekly War News Digest

Stories of Activities and Conditions Throughout the United States and on the Battle Fronts, Compiled for Newspapers by the Committee on Public Information at Washington, D. C.

Money Instead of Merchandise Should be Sent to Soldiers

The original order that the approval of a regimental or higher commander is necessary before packages might be sent to members of the expeditionary forces has been modified so officers with the rank of major and higher may approve shipments. The approval of a company commander is sufficient.

The question of the shipment of articles to France first came to the attention of the War Department when the commanding general of the expeditionary forces cabled that contention of such articles had reached a point that French railroads were unable to handle the load. A board appointed by the Secretary of War and the Postmaster General examined 5,000 sacks of parcel-post mail, and found that the articles being sent not only, in the main, were absolutely unnecessary, but undesirable. The investigation showed that the amount of such mail had reached a total of 500,000 pounds a week, and was steadily increasing.

Relatives and friends, according to a recent statement by the War Department, will find they often can do better service to soldiers by sending some money for the purchase of articles in France than by forwarding articles. Tobacco is now being shipped in part of the Army ration, and merchandise of nearly all kinds may now be purchased in France through the huge general stores established by the Quartermaster Corps at lower prices than charged by relatives here.

Army Medical Department Declares War on Flies and Mosquitos

Special attention is being given by the Medical Department to cleaning up spots where mosquitos and flies breed. In some cases it has been necessary to dig channels in streams, drain swamps, and put in elaborate ditching systems to clean up stagnant pools and streams. In cases where it has been impossible or impracticable to drain swamps and do similar work, here has been installed a system for keeping slow-moving streams and still bodies of water covered with oil. At all points within the camp where there is the slightest possibility of mosquitoes or flies breeding daily spraying of oil is done.

Arrangements have been completed with the Federal Public Health Service to carry out a similar program in the territories adjacent to the camps. The Health Service has agreed to fill in, open streams, and drain swamps and continue the oil spraying for a distance of 1 mile around each camp.

In answer to queries regarding the protection afforded against mustard gas by American masks, word has come from the Expeditionary Forces that no information has been received that any box respirator of American or English manufacture has been penetrated in the field.

The Army Medical Department has developed a mobile X-ray outfit for use near the front, carried on a modified Army ambulance. It consists of a standard portable outfit made up of a Deleo gas electric set, high-tension transformer, special type Coolidge tube, and includes an X-ray table, dark room and complete set of apparatus for the localization of foreign bodies. Some of these outfits are already in service abroad and are in course of shipment.

The dental requirements of an army of more than 5,000,000 men can now be met by the present force of the Dental Corps of the United States Army. Examinations have been closed and no further additions will be made to the corps for some time. The number of dental officers has expanded since war was declared from 58 to 5,810. Commissions were offered to 5,467 dentists and all but 27 were accepted.

The average number of tooth fillings in the Army ranges from 225,000 to 250,000.
