Navy Department Tells of Fighting Near the Clouds Ensign Stephen Potter, United States Naval Reserve Force, killed in action with German planes April 2, 1918, was the first American naval aviator to shoot down and destroy a German seaplane, according to a Navy Department statement.

The report states that on March 19, 1918, a long-distance reconnaissance of the German coast was made by a large American flying boat operating from a British Royal Air Force station. Ensign Potter was one of two American naval aviators accompanying this expedition, and Potter was successful in shooting down a German seaplane which attacked the reconnaissance formation. A second enemy seaplane found safety in running away.

Potter's death reflects credit on his courage. He was killed in a fight with seven enemy single-engine planes. He was second pilot to a British Air Force captain, who was with him when he shot down the German plane in March. Two British planes had been down to a point 6 miles from Hove, Light, when two enemy planes headed toward them. The British plane, closed on the nearest German and opened fire. Two more hostile planes then appeared overhead and attacked vigorously, while three other enemy planes passed at once. The two British planes dived and speared westward under continuous attack from the rear. One of the Germans disappeared.

Medical Department Has Mobile Apparatus to Provide Fresh Water

The American soldier in France gets pure drinking water from mobile water trains. The trains are under the jurisdiction of the Army Medical Department. They are mobile units which purify, filter and sterilize water, and are used for consumption. When municipal water works do not furnish sufficient water to the people of a town, these units do for the soldier. A number of purification units with attached motor-tank trucks constitute a train. Each unit is a complete filtration plant including laboratory. Arriving at a stream it sets hose into the water and pumps the water through a pressure tank. Before the water passes through a sand filter it is treated chemically to rid it of disease germs. The pure water is pumped into tanks mounted on truck which carry the water to the soldiers.

New Shell-Loading Plant Will Handle 52,000 Shells a Day

Quantity if not capacity shipments will start soon from a new Government shell-loading factory in New Jersey, one of the four such plants each of which is larger than any similar plant in the world. When turning out 52,000 loaded shells a day under full operation the plant will use 2,000 tons of shells and explosives daily, the products of some 75 factories. More than 5,000 workmen will be required. Plans contemplate the employment of a large number of women. The marking of shells to designate size, load and range will require 250,000 operations each day. The plant has a total area of approximately 2,500 acres. More than 100 buildings, with an aggregate floor-space of 1,300,000 square feet, will provide storage for shells and parts and for material. A small city, with heating and lighting plants, water and sewage systems, hospitals, fire-fighting plant, and restaurants, was built to house the employees. There is equipment to protect the health of those who work with poisonous gases,

Every hour is valuable in farm work this year, warns the Department of Agriculture. Avoid delays in thrashing. Every hour a threshing machine is kept idle because of breakage or bad adjustment means time lost in the work of getting food for the soldier fighting to preserve American principles and America.

The Department of Labor reports adjustment of 39 industrial disputes during a recent week. This is a record. Eleven strikes and two threatened strikes were adjusted. Included in the strikes settled was that of machinists at the Curtiss Aeroplane Co., plant, Buffalo, where 300 men quit and 15,000 were affected indirectly.
