Peak of the Load

It comes at breakfast, luncheon and dinner hour. The demand is sudden, tremendous.

"Peak of the load," says the gas engineer, "What a convenience," comments the housewife. And both refer to the biggest service problem in the public utility business.

To get gas service when, where, and how you want it without warning, without telephoning for it, means that we must have "peak of the load" equipment to meet "peak of the load" demands.

This equipment is costly. It takes a lot of money to keep it in good condition, ready at all times to serve you. And the maximum number of men must be employed to operate it whether the call comes or not.

Vital things, these. And they must be paid for if you are to get the gas service you demand, in the way you demand it.

Think it over!
