**C. J. WINTER** . . . . . Business Manager

Entered at the Downers Grove Post Office as second class mail matter. Advertising rates made known upon application. Subscription rates \$2.00 per year. Single copies 5c.

**IT CAN'T BE DONE**

Isn't it strange that most people in a suburban town have the idea that the local editor ought to print the news when it hits the other fellow but his own case, "Well, don't put anything in the paper about it." It might be known and talked about on the streets, but to see it in cold type, oh no! Still the editor must get something of news value into print and he really doesn't like to hurt anyone's feelings but—he alone must be the judge as to what goes into his paper. He has certain standards and ideals by which his actions are governed in printing or not printing what comes to his desk.

When it comes to factional squabbles he must listen politely but when it comes to airing these in the paper, the blue pencil must of necessity be working. The editor is in receipt of a communication this week from Westmont, requesting that it be published, in regard to the recent disturbance there between the president and chief of police. It gives a certain side of the case.

Frankly we are not interested in either side of the affair nor do we want to get mixed up in the fracas. This communication has found its way into the waste-basket, although properly signed. It has been the policy of this paper for a good many years not to let personal affairs have an airing in its columns. We stand for what is the best for the village and will push anything we think worthy, to the limit. News items are desirable but personal, and factional arguments, pro and con, are not.

**Almost All.**

A little girl had spent the whole morning at the zoo with her father and read all the notices and placards very carefully. As they passed the turnstile to return home the father said: "Well, I think we have seen everything don't you dear?" "Everything but the pickpockets they talk about," she replied.

**HONEY PHILOSOPHY**

Fame is a wonderful thing. Think of the bird that first conceived the notion of starting a fire to keep warm before there was any fire. You know his name, of course. Then there was the boy who really owns all the gold in the world, the fellow who looked at the mountain, saw there was some stone in it, dug up the stone, saw there was metal in the stone and figured out how to get the metal out of the stone. You remember who he was, too. And the other boy, what's his name—the chap that fixed out words that carried meaning, and spoke them at the rest of the gang so they could all converse? Everybody knows who he was. There's no use talkin'. It's very important to get your name in the paper an' get a reputation.

**ELMHURST LAWN FETE**

The big lawn fete which was held on the Elmhurst Masonic Temple Grounds last year and which attracted a large number of visitors to Elmhurst, is being repeated on Saturday afternoon and evening of August 12, 1922. It is expected that four to five hundred cars will again tour Elmhurst on that day.

The attractions of note are The Children's Band of the LaGrange Orphan Home and the Million Dollar Band of Siloam Commandery.

**Shedding Weight by Work.**

On the track, a loss of eight pounds in an hour is very common even when men are in the pink of condition. So in the sea, where the best trained swimmers lose weight rapidly (one of them, in attempting to swim the Channel, is reported to have lost the water ten pounds lighter than when he entered it, notwithstanding that he took a good deal of food, liquid and other, meanwhile. It is really absurd, therefore, to become apprehensive because of a slight loss of bodily weight. Of course, a continuous loss over a reasonable period should be attended to. But small variations being natural and consistent with perfect health, need not worry anybody.

**Crops of Yugoslavia.**

The chief crops of Yugoslavia are wheat, corn, oats, rye and barley. There is no place in Europe where plums grow better, and a great deal of plum marshallade is made for export. Thirty thousand people are employed in silk culture; some raise tobacco and a large number engage in stock raising.

**A Remedy for Hives.**

A remedy for hives is to take one-tenth grain of calomel twice a day. Hives are due to auto-intoxication—a state of being poisoned from toxic substances produced within the body.

**COOLIDGE GIVES**

**GOOD ADVICE TO CAPITAL & LABOR**

(Continued from page 1)

recognized little or no obligation towards his employees and had little regard for his customers.

"In large enterprises the ownership gradually became more and more divided with the advent of the corporation. In that case, oftentimes the management was entrusted to representatives, while the owners corresponded to absentee landlords.

"Under this system, as soon as employees could organize and make demands, a condition existed which led to the most violent and bitter industrial disputes. All hands were eagerly asserting their right to rule, forgetful of their obligation to obey.

"Investigation and experience have gradually brought about the recognition of the correct principle. Time and economic development will insure its adoption. Industry is changing from the theory of exclusion to the theory of inclusion. It no longer is content with one small part of the individual, it seeks to enlist all its powers, to recognize all his rights as well as require the performance of all his obligations. In the ideal industry, each individual would become an owner, an operator, and a manager, a master and a servant, a ruler and a subject. Thus would be established a system of true industrial democracy.

"In very many industries this is already taking place. Employees are encouraged to purchase stock in the corporation and are provided with credit facilities for such purposes. This gives them ownership. They are encouraged to make suggestions for the better conduct of the business. They are requested to apply their inventive ability in the various mechanical operations. Through trade unions and shop committees they have a large share in the determination of wages and conditions of labor. By the introduction of the sliding scale and piece work they share in the general prosperity of the concern. This gives them management. Thus industrial democracy is being gradually developed.

"There is a principle in our economic life that needs somewhat more emphasis. Long ago James Otis declared that kings were made for the good of the people and not the people for them. It needs also to be remembered that the people are not created for the benefit of industry, but industry is created for the benefit of the people. Those who are employed in it are its chief beneficiaries. Those

who have acquired capital provide the plant and machinery for the workman. Those who have acquired skill in organization provide the management for the workmen. The manager secures the raw materials and markets the product. Capital and management perform this great service for the benefit of the workman. He performs a corresponding service for them. Unto each who contributes in accordance with his ability there is due equal consideration and equal honor. There is no degradation in industry, it is a worthy enterprise, ennobling all who contribute to it. It will be successful in accordance with the opportunity given for the development of all the powers of mankind and the acceptance of the obligation alike to rule and to obey.

"The disappointment which has been experienced, at first thought, in the increase of power, whether of wealth or place, has resulted from the expectation that it would bring relief from the necessity of obedience. Neither political nor industrial democracy can relieve mankind from the requirement of obedience. There is no substitute for virtue. Too much emphasis has been put on the desire to rule and too little on the obligation to obey. More and more all social problems must be worked out in accordance with this principle. An obedient nation would possess supreme power. The law of life, the law of progress, is the law of obedience, the law of service.

"Whoever will be great among you, let him be your minister; and whoever will be chief among you, let him be your servant."

**The World's Antiseptic.**

The sun bath establishments of the higher Alps are flourishing as it seems to be established as a fact that the sun's rays have certain curative powers and the persons who go there seem to be improved to a great degree. It has been noticed in England and Wales that there is a relationship between the amount of sunshine and the death rate. One recent year was noted as the sunniest ever experienced and the death rate was the lowest.

**Finch a Musician.**

The purple finch, a bird of glistening, deep carmine plumage, is an excellent musician, singing a rich, rolling, well sustained song, says the American Forestry Magazine. This species has a decided fondness for buds of various kinds, and may often be seen eating the catkins of the poplars.

**The Thousand Islands.**

The beauties of the St. Lawrence river were first seen by a white man when Jacques Cartier, on a voyage of exploration, happened on the stream in 1535. It was not until 1615, however, that the region of Alexandria bay was discovered. In that year Champlain traveled up this part of the river. About 1750 the French began to realize its wonders and christened it Les Mille Isles.

**The Scream of the Pipes.**

It is claimed for the bagpipes, by some admirers that it is among the oldest of musical instruments. Whether or not the oldest, it is certainly the loudest of all instruments. The duke of Sutherland owns a bagpipe which figured at Prestonpans, and must therefore, be nearly 200 years old, yet it can still be heard at a distance of eight miles.

**SPECIALS!**

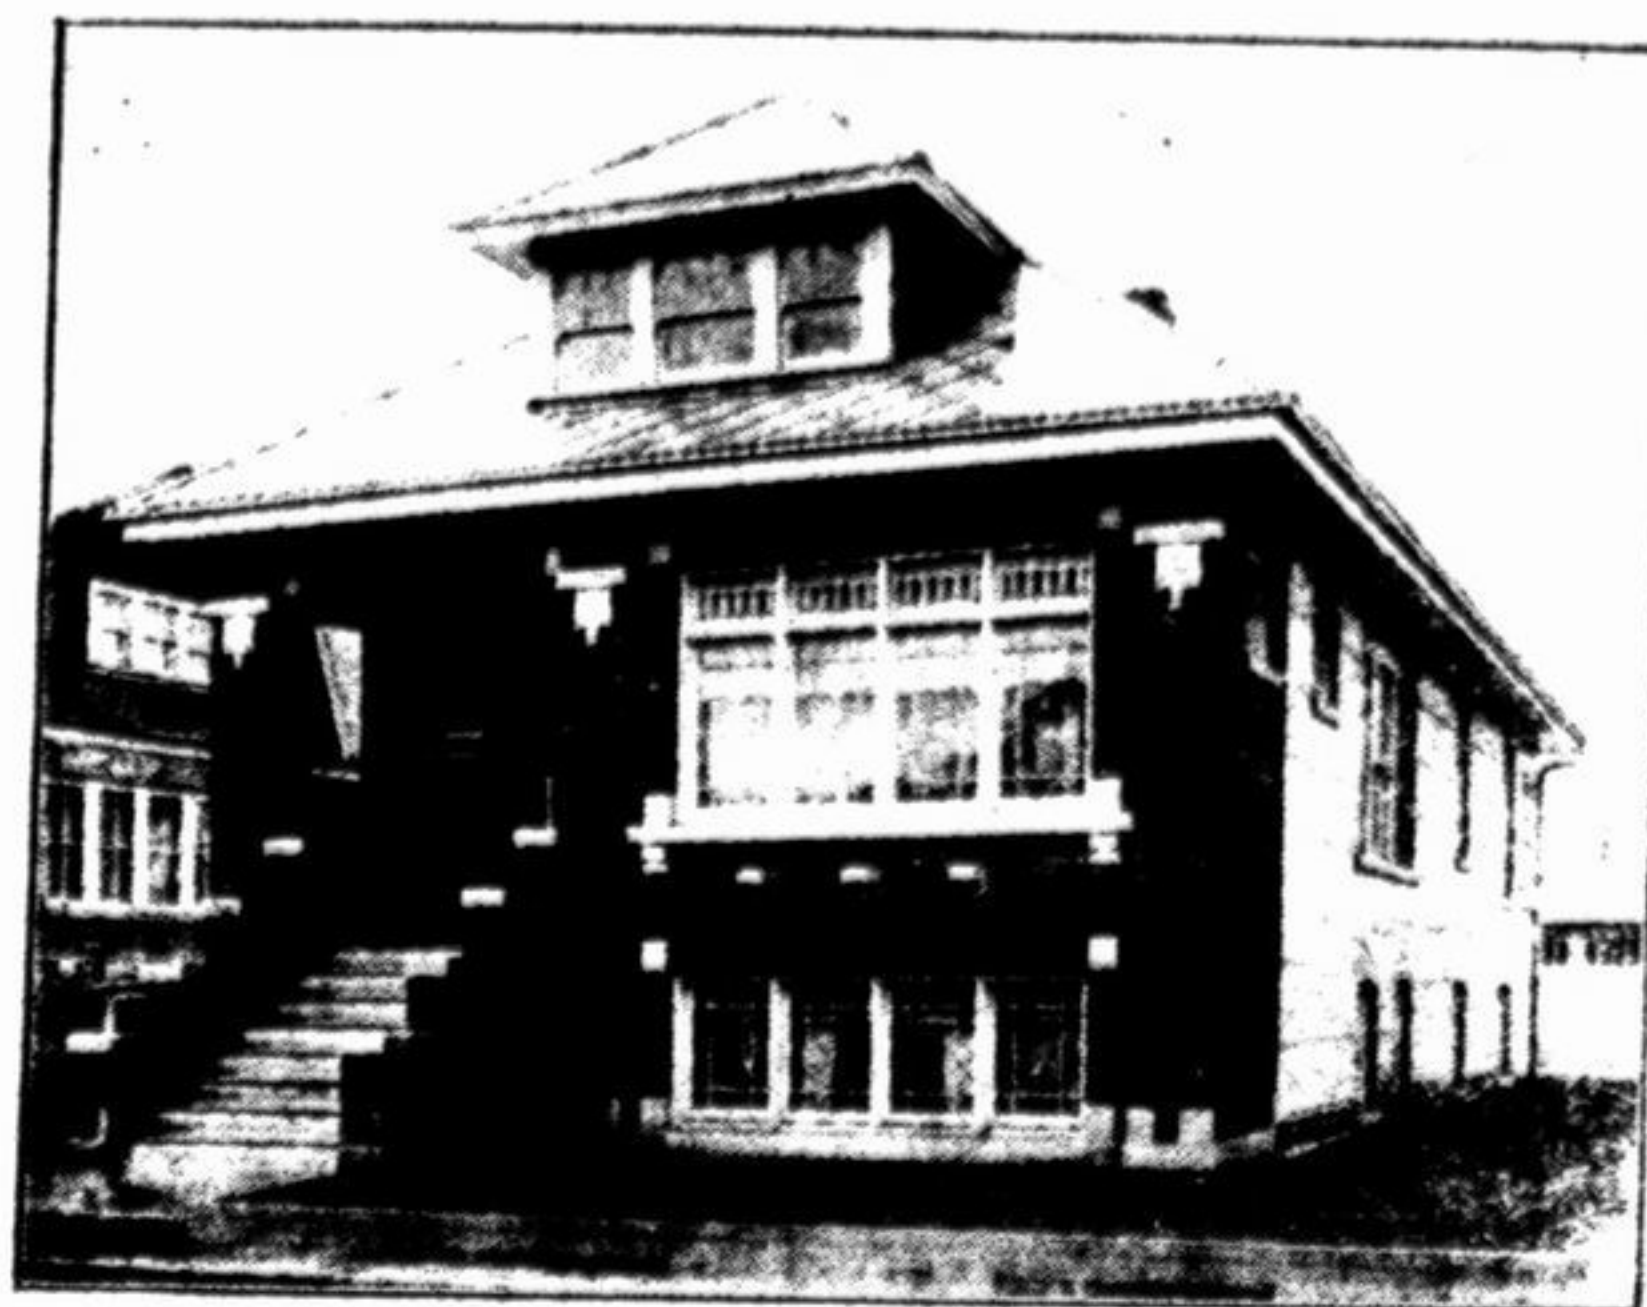

- Pork Butts, fresh . . . . . 20c
- Rib Roast, lb. . . . . 24c
