

Also, the students ^{having to} riding a school bus to
 and from our classes find it to long a ride
 in order to pick up our load before we reach
 the school. Indeed we do need a bridge that we
 can travel over safely. Students have to walk a
 distance in order to catch the bus. On either side
 of the bridge there is absolutely no turnaround spot
 for the driver to turn a seventy-two passenger
 bus safely.

As a mail delivers it is very inconvenient
 to back track 6 miles to deliver the mail
 with one bridge out. I lose about a half
 hour to deliver the mail. If the other bridge
 goes out I will lose another hour to deliver
 mail. So as you can see the bridges should
 be replaced.
