

IX A close up view of a Pipeline X-Ray Truck. This machine was used to X-Ray each and every welded joint, to insure a perfect joining of each length of pipe. When this line explodes under testing pressure, it is very seldom they separate or explode at these joints, but rather a weakness in the pipe between the joints gives way and explodes.

X A rear view of the same X-Ray truck. Note how the joined pipe curves up and over the hill to the west. One of many company cranes can be seen in the back-ground.
