

Salt has been highly valued since 1866. Salt
beds in Goderich Ont. produce $\frac{3}{4}$ of the world total.
Mrs Threl told us how salt was made, by evaporation
of salt brine. Not salt is dyneumated.
Salt is used in, chemical plants, soap, glass,
washing soda, Borax Soda. Photographic chemicals; Sodium
chloride ^{rock salt} for the Road etc. Textile cloth dyeing, Tanning leather,
Water softener, Fishermen use 6000 tons a year:
Salt is used for most everything and I'm sure we all
agree we couldn't live without it for very long.

Mrs Mary Bensworth thanked Mrs Threl for the interesting
paper on salt.

We then had a Geography match which lasted for
quite awhile, even while we had our coffee & cake.
I think most of us went home, still thinking of a
place that started with an A.

Maria Field Sec Treas.
Nora McNaughton.
