The Science of Kissing.

Science in the last few years, has gained a | the Winter Palace. terrible foothold in this world. It has rattled the dry bones of old fogyism, made pi out worn-out theories, upset ideas which have been established for centuries. The latest and most astonishing fact that has been de veloped is that there is a scientific mode kissing. The day when a young man could grab a girl around the neck and gobble kiss in a rough but comfortable manner, is past. The time when he could ci.c'e her waist with one arm, get his shirt bo om full of hair-oil, and pirouette his lips over every Science has proclaimed against it, and man shudders, but remains silent. The old style of kissing, which sounds like some one tearrapidly going out of fashion, although the majority of girls admit that science has lingering, heart-thrilling kiss, and causes them to express no little regret at the change. The improved scientific method of of kissing is to throw the right arm languidly around the fair one's shoulder, tilt her chin up with the left hand until her nose is pointed at an angel of forty five degrees, or rather until it has an aspect resembling the bowsprit of a clipper-built sloop, then stoop slowly and gaze about her lips in a quiet, subdued sort of way, tickle her nose with your mustache until she cries "Ouch !
