Improving Farm Homes and Grounds.

The immediate surroundings of farmers homes generally are far from being as attractive in appearance as they easily can be made. Indeed the rural front yards are, as a rule, much less beautiful and interesting than those of people in the same general circumstances in towns and cities. In the latter, lawns are well cared for, and choice ornamental trees, shrubs, and flowers, are much oftener met with than about country homes. There is no valid reason for this. Such embellishments are not more easily acquired in the city, but just the reverse. The farmer has teams, implements and manures for putting the house grounds in the best condition for ornamental treatment; labor is quite as cheap as in town, while sodding costs far less in the country. Trees and plants are as cheap to the farmer as to any one, while in many places some of the best kinds for ornament can be had from the woods for the digging.

There may be points in which life on the farm lacks the attractions common to town life. but in charming home grounds the farmer is certainly to blame if the city dweller excels him. It is often wondered why country life has not charms sufficient to hold the boys to the farm, and that they grow up longing for the city. If more attention were given to making their home surroundings more cheerful and attractive for the sons and others of the family, there would be less heard of this trouble. And in all such work every proper effort is sure to be seconded by the wife; while nothing is more natural than for the children to be enthusiastic helpers in this work. Such improvements of course require some outlay, but this can hardly prove otherwise than a good investment. Every dollar judiciously spent in this way will soon be returned many fold in the increased valuation of any place, should it be desirable to sell, to say nothing of the greater happiness and love of home that will thus be inspired.

Now that the long evenings are to hand, this subject should receive due consideration. Plans may be drawn up for an improved arrangement of walks, drives, flower beds, shrubbery, borders, and other matters. Every detail of these can be decided upon, and entered upon a map, long before winter is over, so that when spring opens the work it greedily without waste. can go on intelligently and to the best advantage.

Poultry Raising as a Business.

There is just now much interest in poulbry raising. ...d a disposition to take it up on a large scale. The following extract from one of our recent letters will give an idea of the many inquiries made of us : " Is poultry raising a profitable business, and would you advise a young man to invest one thoosand dollars in it?"-This might be answered in brief: Poultry are profitable, and we would not advise a young man (nor an old one) to at once invest one thousand dollars in it. Farmers find the poultry yard the most proficable part of the farm, in proportion to the capital invested. Many reckon in this way: It fifty fowls are profitable, five hundred will be ten times as profitable. This is an instance in which figures do not tell the truth. As soon as the number of fowl is doubled, troubles are quadrupled. A rarge and houses which will keep tifty in perfect health, will be overcrowded with one hundred, and all the troubles due to a dense population will follow. While we believe that poultry keeping on a large scale may be made profitable, capital to purchase birds and build houses, is not the only thing needful. Those who un lertake the business, must give their whole time and attention to it. One point is well settled-fowl can not be kept together in large numbers, and thrive. The whole matter requires careful study and experiment. The beginner should etart in a small way, and increase as saccess seems to warrant it. The point to be determined at the outset, is: Shall eggs or dressed fowls be the object? Each requires a different management throughout, though the two may in a measure, be united. Starting with abundant capital, and no experience, will surely end in failure. The best works upon poultry management insist upon keeping towl in small flocks; this is regarded essential to success.

Preparing for Spring in the Garden.

Wherever a crop is taken off, it will a great gain to manure and plow or spade the land, leaving it rough during the winter. All such work as making paths, laying son states that the coal-bearing rocks devel-NO w than when the press of spring work is at hand. If new frames are needed, or straw mats, or crates for marketing produce, or garden labels are required; if implements are to be made, repaired or bought-whatever can be done in the present months—will save much valuable time in spring. Now, and all through the winter, add everything to the nanure pile that will decompose and preparations for spring is the pricking out | monton a much more important coal seam and lettuce plants frem seeds. It is important to set the plants of cabbage and cauli- much resembles the "Coal-Banks" coal stem, the portion most readily injured by freezing, may be covered. The sashes shou d uot be put over the plants until there is danger of severe freezing weather. Other frames should be made ready for very early lettuce. The soil is to be spaded and enriched and made ready for planting, and the frames then filled up with leaves. If there are shutters at hand to cover them, all the better. Earth is often wanted for hot beds. seeds-boxes, etc , at a time when the ground is still frozen. Lay in a good supply of fine, rich soil, under a shed, or where it can be had when needed.

Potato and Top Onions.

Many of our friends appear to confound hese quite different varieties of the onion. Though varieties of the same plant, they are multiplied in a very different manner. The variety generally called, in this country, the "English Multiplier," proprates only by a subdivision of the bulb. If a large bulb of this variety is planted, it will produce a cluster of a dozen or more of small bulbs. If, next year, each of these bulbs be set Small bulbs are planted to produce large | awful knotes."

one, and large bulbs to grow small ones. The cultivation of this variety, while often carried on in private gardens, is found in the vicinity of Richmond, Va., to be profitable on a commercial scale, and this is the variety chiefly grown in that locality for Northern markets. The "Top Onion" is a very different variety. In this the fower stem, instead of producing a cluster of flowers, followed by seeds vessels, bears a cluster of small bulbs, each half an inch or less in diameter. When these bulbs are planted out, each grows and makes a fine, large onion. If this onion is kept through the winter and planted the next spring, it will throw up a stem crowned by a cluster of small bulbs, each of which, the next year, will produce a large onion, and in this manner the alteration will be kept up.

Cow's Milk for Colts.

A pleasant note from the Secretary of the Ayrshire Breeders' Association, says that Col. J. E. Russell tried to supplement the milk of the dam of certain of his colts with that of Jersey cows, but found that it did not agree with them generally He found they thrived splendidly upon Ayrshire milk. One of the colts so reared by him is the famous Parole, whose astonishing performances do credit to both the theory and practice.

New corn is worth more to feed to cows than for any other stock. They will eat cob as well as grain, which is not the case with other stock. Ears of soft corn are fed with very little waste, as there is much more nutriment in green cobs than in those that have become hard and woody.

A day's work knocking to pieces the clods of cattle excrement on old pastures will make a great improvement for next season. If the sod is thin, harrowing it so as to stil further fine the manure will cause the grass to thicken wonderfully, and will make the sod much heavier when the ffeld comes under the plow.

A Missouri farmer recommends stacking fresh fodder corn with wheat or oat straw in alternate layers of a foot of the latter to | two three inches of the former. He says there is no danger of spoiling, as the juices of the corn are absorbed by the straw, and the latter is rendered so palatable that cattle eat

English farmers are finding an objection to deep plowing that it increases the growth of weeds. In this country deep plowing has the opposite effect, turning weed seeds under where many of them will not soon come to the surface. Another reason is that in most places deep plowing in injurious, turning up a soil in which neither weeds nor anything else will grow well. As a general rule, that which will make crops grow will increase weeds also, and these are only to be got rid of by thorough tillage. Heavy manuring, even when no weed seeds are carried out in the manure, will make, a greatly increased growth of weeds.

Coal in the North-West.

A report will shortly be issued by Mr. George M. Dawson, the Assistan-Director of the Geological Survey, on the coal fields of the North West. Some of the advance sheets have already appeared, and these go to show that the report will demonstrate very clearly that the North-West possesses abundance of coal of excellent quality, and

According to Mr. Dawson's report, it would appear that the coal and rignites of the North-West are of the tertiary age, and not like those of the East, of the carboniferous system. The district which has been most explored, and with the most satisfactory results, is that in the proximity of the Bow and Belly Rivers, extending eastward from the base of the Rocky Mountains to the 111th meridian. Mr. Dawson says that the fuels in this district vary from lignites. but slightly superior in quality to those of the Souris region, to coals containing a very small percentage of water, forming a strong coke on heating, yielding abundance of highly luminous hydro-carbons, and precisely resembling highly bituminous coal, though of the cretacious age.

of coal underlying a square mile of territory in several localities. These estimates go to show that the quantities vary from 5,000,000 to 9,000,000 tons. These are enormous figures, and they should dissipate all nervous apprehension of a "coal famine" in Canada for many years to come. Mr. Dawdrains, etc., is more advantageously done | oped so extensively on the Bow and Belly rivers, and their tributaries, are known to extend far to the north and west, though up to the present time it has been impossible to examine them at more than a few points .. On the North Saskatchewan several seams of lignite coal, resembling that of the Souris River region, outcrop at Edmonton. The most important is about six feet in thickness, and has been worked to some extent increase its bulk and value. Among the for local purposes. Thirty miles above Edinto cold frames, the cabbage, cauliflower, occurs. It has a thickness of eighteen to twenty feet. It is of excellent quality, and flower down to the first leaf, so that the from the Bow River. In other parts of the territory there are indications of large deposits, and thus the prospect of opening out the Canadian North-West is of the most encouraging nature. Canada may be congratulated upon its immense treasures, and its brilliant prospects. - The Scotsman.

Four Little Ones.

"Oh, ma!" exclaimed a little Austin girl, glancing at the steam-gage on a stationary engine, "it's 60 o'clock. I didn't know it ever got so late as that."

"How many parts of speech are there, Johnny?" "Well, in our house there ain't none, 'cause when mammy gets her speech' started it never parts; it just reaches from sun to sun 'thout even a crack in it."

"Pa," said a little boy, "a horse is worth a good deal more, isn't it, after it is broke!" 'Yes, my son. Why do you ask such a question?" "Because I broke the new rocking-horse you gave me this morning."

Little Trot who was taking an observation the other day while her mother was making some old-fashioned crullers. "Pears out, it will grow and make a large onion, fit to me," she exclaimed, "they'd go down ter use. So the alternation is kept up. | easier if you didn't tengle 'em up in such

AN AWFUL CRIME!

an Englishman in New Hampshire-He slays his entertainers-A man's leap forlife-What the trunk contained.

Thos. Salmon, an Englishman, aged 36, left his house at Laconia, N. H., recently, wheeling a trunk, which he took to the house of an acquaintance, Jas. Ruddy. stopped there for the night, taking trunk up stairs. Shortly after 4 in the morning the neighbors were awakened by a woman's screams proceeding from Mr. Ruddy's house. They found Mrs. Ruddy lying on the ground under the front window through which she had made a desperate leap. She was bleeding profusely and was unable to rise. On entering the house flames burst out from the doors and windows, but were soon extinguished. The officers found lying upon the kitchen floor the bodies of Ruddy and his infant child, both cut in a horrible manner and both covered with the contents of a feather bed which had been saturated with kerosene and set on fire. Both bodies were disfigured by the flames past recognition. In the bedroom was found the trunk mentioned and the lifeless body of Mrs. Ford, which was IDENTIFIED BY HER HUSBAND.

One of her limbs had been chopped off. The detached member and the remaining leg were bound to the woman's body with a clothes line. The bed clothes had been saturated with oil, piled on the body and an attempt made to set them on fire, which

Mrs. Ruddy on being questioned said the crime was committed by Salmon with a hatchet.

Salmon was arrested on the road between Laconia and Plymouth. He denies all knowledge of the affair. The populace threaten to lynch him. Salmon is a cook by trade. He has a wife but does not live with her. It is alleged that he caused a separation between Ford and his wife and that he was a frequent visitor to Ruddy's house. When he reached the latter place with the trunk he called out Mrs. Ruddy and the

CONVERSED FOR FIFTEEN MINUTES. after which they went into the house. On Saturday morning Salmon took down a clothes line in the back yard of Ford's house, and it was noticed that his hands trembled violently. Mrs. Ford was between forty and fifty years of age, and was last seen in company with Salmon on Friday morning, going in the direction of the village. Ford says his wife had been in Salmon's company two or three nights. Salmon has a hair lip and is a repulsive looking person. There were several blood spots on his clothing. The cornor's jury found him guilty.

Wanted a Will.

A colored man about 60 years of age, blind in one eye and walking with a cane, hobbled up stairs into the office of a Griswold street lawyer yesterday and announced that he desired to make his will. "Got much property to leave?" asked the

lawver "Well, sah, Ize persessed of a dog, a cook-stove, a wheelbarrow, an' two flat-

irons dat my fust wife left me." "And who are you going to leave them

street. Ize mar'ied agin, you know, an' I wants to put dat property whar' my present therefore that the fuel problem is practically ! wife can't get it. She doan' git nuffic' belongin' to me if I can help it.'

"It will cost you \$5 to have a will

"Shoo! Can't cost dat!" "Yes, it will,"

"Den I reckon I'll administrate on my stuff afore I die. Would dat work?" "Certainly."

"Den I'll run de dog off, lend de wheelbarrow, pocket de flat irons, an' stan' by to rush de cook-stove outer de house de fust time de ole wom in goes to de grocery. Kin I git a warrant heah?"

"What for ?" "Fur assault an' battery. When do ole woman finds what Ize done she'll walk all ober me, and I might as well save time by getting out de warrant now."

He was directed to the proper place, and Estimates have been made of the quantity | he went away saying that it would perhaps be still better to have her arrested and sent up for ninety days in advance. - Detroit Free

Stealing a Church.

A writer in the Atlantic Monthly Mr. Edward Everett Hele, we believe, once contributed a piece of fiction entitled "Stealing a Meeting House." Down in Ohio this is truth. An old Methodist church has stood on the land of J. C. Smith for many years. Recently Smith sold his real estate to Wells, the church not being included in the sale. He then disposed of the church to Israel Smith and the latter moved the structure one dark night when Wells was away from home to his own parish across the street. Wells was furious, claimed that the church was his property, and brought suit against Smith, charging him with theft.

The case was decided, and Smith was compelled to pay a fine of \$100 and costs, besdes paying Wells for the church.

What She Was.

The other day a rather green looking young fellow - though he evidently lived in the city-went into a dry goods store and walked up to one of the lady clerks and the following conversation occurred: "I want to get four yards of wide ribbon

for a girl. "All right, sir. What color do you want?"

"I don't know, I just want four yards of ribbon, that's all." "Yes, but we ought to give her some col-

or that will suit her. Is she a blende or a brunette ?" "She's ain't neither; she's a hired girl." Cleveland, Ohio.

Why Children Should Eat Honey.

Thousands and tens of thousands of children are dying all around us, who, because their ever developing nature demands sweetness, crave and eagerly demolish the adulterated "candies" and "syraps" of modern times. If these could be fed on honey instead, they would develope and grow up into healthy men and women.

Children would rather eat bread and honey than bread and butter; one pound of honey will reach as far as two pounds of butter, and has, beside, the advantage of being far more healthy and pleasant-tasted, and always remains good, while butter soon becomes rancid, and often produces cramp in the stomach, eructations, sourness, vomiting and diarrhea. Pure-honey should al. ways be freely used in every family. Honey eaten upon wheat bread is very beneficial to health. The use of honey instead of sugar for al-

most every kind of cooking, is as pleasant for the palate as it is healty for the stomach. In preparing blackberry, raspberry, or strawberry shortcake it is infinitely superi-

It is a common expression that honey is a luxury, having notning to do with the lifegiving principal. This is an error-honey is food in one of its most concentrated forms. True, it does not add so much to the growth of muscles as does beefsteak, but it does impart other properties no less necessary to health and vigorous, physical and intellectual action. It gives warmth to the system, arouses nervous energy, and gives vigor to all the vital functions. To the laborer it gives strength-to the business man, mental force. Its effects are not like ordinary stimulants, such as spirits, etc., but it produces a healthy action, the result of which are pleasing and permanent -a sweet disposition and a bright intellect.

EPILEPSY (Fits) successfully treated. Pamphlet of particulars one stamp, address World's DISPEN-SARY MEDICAL ASSOCIATION, Buffalo, N.Y. One thought of turkey makes the whole
