AGRICULTURAL.

Farm Work for September.

The yield of wheat depends largely upon he tillering, therefore sow carly on rich, mellow soil. Wheat needs to make a strong growth of roots before winter. Use superphosphate or other commercial fertilizer, when there is no sufficent barnyard manure. Lime may be used to soil rich in vegetable Its chief value is in liberating other elements of plant food. As a preventive of rust, wet the seed grain in strong br.ne, or a solution of four ounces of bluestone (sulphate of copper), to a gallon of Sow with a drill when possible. the wheat land is not well drained, make the water furrows with the plow after all These will quickly carry off surface water after hard rains. Grass seed may be sown a few weeks later. Clover best sown in spring, and the seed may be scattered on the last snow.

The best way to harvest corn is to cut the stalks close to the ground, and place them in shocks. A "shocking herse" is almost indispensable in setting up corn so that it will Willow, or other tough withes are excellent for tying the shocks when the stalks are not suitable. The seed corn should have been selected in mid-summer, but if delayed. neg'ect this important work no lenger. Carefully decide what are the superior points in the corn desired and choose that. This can be best done while the stalks are standing. Go through the corn field and cut the selected stalks and place them in separate shocks.

Buckwheat should be harvested before Cut it in the morning frost can injure it. when the dew is on, to prevent shelling. Thresh as soon as the straw is sufficiently dry, and spread the grain thinly upon a floor as it may heat in a large heap.

Harvest potatoes when ripe, and before hard rains induce new growth, or cause them to rot.

LIVE STOCK NOTES.—One of the leading requisites for health and thrift in live stock, is regularity in feeding and watering. Both the quantity and quality of food should be uniform. Pastures are now beyond their prime, and need to be reinforced by roots, fodder corn, or other green food. Any fallng off in condition in farm stock should be strictly guarded against as cold weather approaches. Young animals profit much from any extra feed during the first year. Horses after a day's work enjoy being sponged with clean water containing a few drops of carbolic acid. After the regular feed, they may pass the night in the pasture. Look well to the feet and the shoulders of work-

SUNDRY MATTERS.—Clean up all rubbish about the yards and buildings, and store all farm implements not in use in a dry place. Do not think lightly of the tairs, but compete for some of the premiums. Make it a point to go to at least one exhibition and take the family. Prepare storage room for roots and other late crops, and be well ready for taking in the live stock when cold weather comes and autumn storms threat-

Care of the Work Team.

A dear work team makes farm operations more costly. Growing is essential, as it gives rest to tired muscles. It is second only to proper food. It has been said: "A good grooming is worth four quarts of oats. Feed liberally, but do not over feed. Feed regularly, and see that the team has its breakfast, dinner, and supper, before you have your own. It is poor policy to give bcrses no grain until they are about to do some hard job, or a season's hard work. Over-feeding with grain or grass, causes derangement of the digestion. Imperfect digestion means impaired usefulness in the long run. A horse will do more wo k on oats than on corn. Corn will prepare a horse for labor, but oats make a better ration during hard work. Oil and starch in corn make it an undesirable summer tood; it is Old hay, cut and mixed with bran or a little meal, makes a good work ration, if old hay is not plenty, feed newly cured clover or timothy. Give an occasional feed of roots, apples, and the like; they afford a variety and help digestion.

If at all possible, let the tes m during hard summer work drink once in the forenoon and once in the afternoon, besides at their regular meals. Judge them somewhat by your-See that the breast and shoulders do not chafe. To prevent it, take care to have well-fitting collars, and bathe the shoulders with cool water on returning from the field.

A HINT TO SHIPPERS OF APPLES -An English agricultural paper prints some excellent advice to American apple-growers. In the first place, it complains of a kind of two and three quarter bushel barrel, which is extensively used in New York, and advises all who wish to ship fruit to England to use the old fashioned three-bushel barrel, with an honest bulge. Then it alludes politely, but plainly, to the American habit of sorting the fruit, and stowing the second rate article in the middle of the barrel, while the red cheeked, plumb apples are invariably placed in the exposed ends. The place the pleasant faces of their apples all on the outside, and rest assured that if they can get a reputation for honest sorting, their reward shall be substantial.

ALL THE EGGS IN ONE BASKET. - We do not believe in it. The eggs may all be of excellent quality, and the Lasket strong and large enough to hold them, and yet we think it unwise to risk them all at once. There are manychances which a farmer must take, but he is rarely warranted to hazarding his present comforts in the hope of great gains, A man may invest all his capital in hops or cranberries, or some other special crop, and -lose. He may clog all the machinery of his farm operations, by going largely into grape growing, when he might better have kept to his wheat. Farmers have been sold out by the sheriff because the horses possessed too much speed, and the race track had greater fascinations than the corn field. Some men run all to cider, have a mill to make it, and that is all they make. Others raise only hay, and sell it off the farm. Their eggs are all in one basket. Mixed husbandry, and not specialties, wins in the fitting." long run.

How does Pat propose to get over single blessedness? Why, he proposes to bridgeit, of course.

Drinking Ceremonies.

The custom of touching glasses prior to drinking healths is very common in Eng. land and many other countries, and especially in Germany. It is curious to trace heat this custom has prevailed, and still exists. even among savage tribes. To drink out of the same cup and cat of the same plate, was one of the ways in which the ancients of brated a marriage, and the wedding feast continues to be not the least important of the marriage ceremonies to the present day. The Indians of Brazil retain a custom drinking together a little brandy, as a sign that the marriage is concluded. similar customs are met with. In the mediseval banquets of Germany it was the custom to pass a "loving cup" from hand hand, but this gradually necessitated that the cup should be of enormous size, and thus smaller cups or glasses wera adopted, and the old custom was conformed to by the drinkers touching their glasses before drinking. The ceremony attending the passing and drinking out of the "loving cup," practiced at our great city festivals and at some of our college halls, is said to have arisen from the assassination of King Ed-It was then the custom among the Anglo-Saxons to pass round a large cup, from which each guest drank; he who thus drank stood up, and as he lifted the cup with both hands, his body was exposed without any defence to a blow, and the occasion was often seized by an enemy to mur der him. To prevent this the following plan was adopted: When one of the company stood up to drink, he required t companion who sat next to him to be his pledge-that is, to be responsible for protecting him against anybody who should attempt to take advantage of his defenceless position; this companion stood up also, and raised his drawn sword in his hand to defend the drinker while drinking. This practice in a somewhat altered form, continued long after the condition of society had ceased to require it, and was the origin of the modern practice of pledging in drinking. In drinking from the 'loving cup" as now practiced, each person rises and takes the cup in his hand to drink, and at the same time the person seated next to him rises also, and when the latter takes the cup in his turn, the individual next to him does the same.

How Opium is Smoked.

The smoker lies curled up, with his head resting on a bamboo or earthernware pillow about five inches high. Near him stands an opium lamp, the flame of which is protected by a glass shade low enough for the point of the flame to project above the top of the shade. The smoker takes a wire and dips it into a little box containing prepared opium. A small quantity adheres to the point of the wire, which is then held over the flame of the lamp until the heat has swollen it into ten times its original size. This is rolled over on the flat side of the clap bowl, the opium all the time adhering to the wire. When it has been rolled to a soft, solid mass it is again applied to the lamp, and this alternate roasting and rolling is kept up for at least ten minutes, by which time it is in the shape of a pill and ready for use. The aperture in the pipe is so small that it can only receive the smallest quantity and the most careful manipulation is needed to transfer the tiny ball of opium from the end of the wire to the bowl of the pipe. The point of the wire is inserted into the hole of the pipe and worked round and round till the soft opium forms into a conical shaped ring around the wire. By twirling the wire the drug is gradually detached from it, leaving the muscles of her body are well developed. it hard to believe that the government can a hole through the opium about as large as | This is accounted for by the constant motion | ever succeed in destroying the species at any the hole of the pipe bowl, with which it com municates. The pipe is now ready and the bowl is held over the lamp so that the opium | Miss Smulsey's case is that she has no bed | far beyond the reach of the human eye, and comes in contact with the flame. A spluttering noise ensues as the smoker sucks at his pipe. After each successive draw he ejects from nose and mouth a volume of smoke, the very smell of which is enough to turn a horse's stomach. By the end of the fourth or fifth whiff the pipe is empty. The smoker scoops up another dose of opium, rolls it into a pill and repeats the operation | began to have trouble with her eyes. A Andes-not only Chili, but Peru, Bolivia away until the pipe falls from his hands and he is lost in dreamland. If tobacco smoking were only half the trouble tobacconists would soon have to shut up shop.

FIVE MONTHS WITHOUT FOOD,

Kate Smulsey's Extraordinary Period of Fasting.

FORT PLAIN, N. Y .- Interest in the case of Kate Smulsey, the young girl whe, 163 days has been involuntarily starving to death, is spreading throughout this section of the country with extraordinary rapidity Within the past week or two scores of per one have come to this village from place many miles away to see or inquire about this remarkable girl. To-day she was very low, and the members of her family believe that she cannot live more than a few hours Although she has suffered great pain of late she has not felt any inclination to take any nourishment. The mother of Miss Smulsey said to-night that her parents and every member of the family had coaxed and implored the girl to swallow some food, but without avail. Even when her agony caused her body to sway to and fro with the

CONSTANT REGULARITY OF A PENDULUM, she turned her face away from the most tempting morsels that could be prepared and said that she could eat nothing. She was conscious and able to talk this afternocn. Kate Smulsey was a bright and industrious girl a little more than two years ago. She was then 18 years of age, and had acquired an excellent reputation among the good peop'e of this vicinity as a dressmaker. She was quick and willing and al ways had plenty to do. In July, 1882, she was taken sick and was confined to her bed. She gradually improved, and for a short time was able to be about. In October, however, she grew worse and was compelled to return to the sick bed, from which she has never since been able to rise. The first symptoms of her disease was trembling and shaking of the hand, followed by an involuntary motion of her right leg and foot. After a while her head had a sidewise movement to the right. Doctors diagnosed the case as St. Vitus' dance, and the usual remedies were applied, but with no benefit to the patient. The girl grew worse and the motion at first confined to the limbs of one side seized her whole body. The motion was at first perpendicular and like that of a person sawing wood, only not so violent. To this particular motion was soon added one partly rolling, and the two were combined. Lately the motion has been rolling only, the rolls constantly moving her entire body from side to side with perfect regularity at the rate of 50 per minute. This motion is perpetual for 22 or 23 hours out of 24, and is perfectly involuntary. The poor girl would be quiet if she could. For an hour or more—never more than two—n the night she is motionless. She then

SLEEPS FROM SHEER EXHAUSTION, but is awakened by the slightest noise. The moment that she wakens the ceaseless rolling begins, to stop only when, worn out, she again sinks to rest. Some persons doubted the necessity of this constant moving of the girl's body, and thought it was voluntary. One physician sat by her side for three hours, during which time there was not the slightest diminution of the rolling. Another physician said he could stop it if he wished, and seizing her by the shoulders, held her tightly a few minutes, but the instant he relaxed his hold her body resumed its motion. She feels the result of this yet, and says that there is not a spot on her person that is not sore. The weight of a pin is actually painful to her, and cannot be | deed been declared "an enemy to the repubendured. THE LEGEND OF STAR ISLAND.

The Only Monument to John Smith, the Friend of Pecahontas.

During the troublesome times before and subsequent to the revolution Shoels, of the coast of New Hampshire, were the recent and hiding places of the freebooters who haunted the northern court and these silent rocks, if they could sp would tell many a tale of bleedy cruelty and gloomy wrong. The pirates used to come here to divide and hide their booty, and melt up the silverplate they captured from the colonists along the coast.

For a long time it was supposed that bushels of doubloons were buried in the gaping crevices of the rocks, or the little caves that have been eaten out of the ledges by the restless tide; but the place was thoroughly searched by several generations of fishermen, and nothing more valuable than a rusty outlass or a bursted blunderbuss was ever

The grandames tell how Capt. Kydd came here often, "as he sailed, as he sailed," and there are legends of other pirates quite as fierce and free as he. The Star Island used to be haunted by a beautiful spectre with long white robes and golden tresses reaching to her heels, who used to come out of some undiscovered cavern at dawn, and shading her eyes with a hand that was as

white and beautiful as a lily's bosom, gaze off upon the sea in hopeless expectancy of the return of a clipper that sailed away and never came back again. The story goes that a bloody-hearted old pirate, being pursued by a cruiser, brought

his beautiful mistress here and left her while he went out to battle, telling her that by dawn he would be back again, but he came not, not even till now. She died of starvation, but her frithful spirit still comes to the summit of the island as the sun rises each morning, to meet the corsair who never re-

There are eight of the islands, the smallest | next age. being as large, or rather as small, as a city building lot, and the largest containing only a couple of hundred acres-nothing but bare, lifeless rocks, carved by the incessant waves into strange grotesqueness, and covered by no vegetation except low clinging vines and the New England blueberry. Four of the islands are inhabited, the largest, the Appledore, bears a hotel and a few cottages. Star Island has another hotel and a small settlement of fishermen; a third has a few fishermen's huts, and the fourth has a bold, white lighthouse springing out of its crest. They were discovered by Cap. John Smith, the friend of Pocahontas, who in 1614 explored the New England coast in an open boat, and spent some time here making repairs and resting.

On Star Island stands the only monument erected in America to Capt. John Smith. It is a rude affair—a prismatic-shaped shaft of marble, upon a pedestal of sandstone, inscribed at length with the record of his valorous deeds, and some cyclopedias say he is buried here, but that is a mistake.

The War on the Condor.
