AGRICULTURAL

THE VEGETABLE GARDEN FOR SEP-TRABER.

BRANS - If too late to ripen unassisted, a frame of boards at the back and front, and banking around with hot manure, and covering with sashes, will secure a crop as late as November. Save ripe beans for seed for next year, and remember that ripe Lima beans are excellent eating in Winter.

BEETS.-Thin out sowings put in last month, and transplant thinnings if necessary ; if not beet greens are good eating.

BRUSSEL SPROUTS.-If they are late, pinch out the tope; it will make them sprout. CABBAGE. - By cleanliness and good cultivation get vigorous, firm headed Drumbeals

and Savoys ready for winter. Sow Jersey Wakefield out-of-doors, and, later, prick them into a cold-frame to winter over for spring planting. CAULIFLOWER. - Keep it growing. Should

frost come on before you use it all, heel those remaining thickly in a cold frame; they will keep and heart well on this side of Christmas. Sow and treat as cabbage for spring use, only they require more protection in winter than do cabbages.

little at a time, according to demand. But do not earth up the winter stock before October. Never earth up except when the celery is quite dry, else damp and rust are liable to occur.

CHIVES.—Plant some in boxes. and by keeping them warm, you can have green chives all through the winter. CORN SALAD. -Sow some on light, shel-

tered ground. It is perfectly hardy, and will afford you greens in early spring. CUCUMBERS. -Sow some seeds or set out

some young plants in a frame; as cold weather comes on, line the frame with hot manure.

ENDIVE.—Tie up a few at a time of that which is nearly full grown. Plant out thickly that which you intend wintering over, and before hard frost sets in, put a frame, well banked, around it, and keep the endive dry overhead.

GERMAN GREENS. - Sow about the middle of the month in rows a foot apart. In winter cover with a tin mulching, which remove early in spring.

LEEKS .- Cultivate and keep clean. For winter use, mulch among them with dry leaves, or lift and heel them in thickly in a cold-frame, pit, or cellar.

LETTUCE.—Before frost comes, get all your hearting lettuces together, so that you can protect them with a frame if necessary. Sow Curled Silesia and Tennis Ball in the third week of the month, and, later, prick them thicky into a cold frame to winter over for planting in hot-beds in early spring.

MUSTARD makes a capital salad. Cut it for use when it is only four or six days old. Onions.-Plant out sets in rows a foot apart, three to four inches asunder, and four inches deep. Examine the ripe onions oc-

casionally, remove the spoiling ones, and break the sprouts from others. OYSTER PLANTS AND PARSNIPS need no care for a few weeks yet.

PARSLEY .- L ft and plant some in a coldframe for winter and early spring use. Thin those sown last month.

RADISHES. - Sow a few out-of-doors, and after this in a gentle hot-bed.

SPINACH.—Put in a goodly sowing of the prickly-seeded for next spring's use. In winter a thin mulching of clean sedge or thatch helps it : but do not put it on thick, as it is apt to harber field mice. Round spinach put in now will give a good crop before winter sets in. If you have New Zealand Spinach, put a box frame over it to keep it from frost. It keeps in good condition as long as you keep frost from it.

SAVING SEEDS.—Save what seeds you can conveniently. Your own saved seeds are just as good as what you can buy. Peppers, cucumbers, melons, tomatoes, beans, and many other things may be saved with very little trouble. But if your time and space for gardening are limited, it may not pay you to save onions, carrots, parsley, turnips and other biennials. Seeds are so cheap that it does not pay to go to much bother in saving our own if our demand is amall.

ONIONS.-In the last week of last September, I planted a lot of yellow Danvers Onion sets in rich ground, in rows a foot apart, three to four inches between the sets, and four inches deep. They grew a little in the fall; I did not cover them at all in winter, and I did not lose one bulb, and in spring they grew first rate. Many of them threw up flower-heads, but these were removed every week. By the end of June they had made splendid bulbs, and showed an inclination to ripen. On the 9th of July I had them all pulled up, and laid on their sides in rows to ripen; on the 15th I topped them all, and brought them inside. Potato onion sets I treated in the same way and with equal results, except that they do not throw of public address required to satisfy the funeral ceremonies another cause for the up any flower-heads. Another thing about | people. potato onions is, that the large sets do not bear large onious, but, instead, a bunch of small ones; it is the small sets that bear the large onions. Onions from sets, if need be, can be harvested about the first of July. and sold at a profit you cannot realize for seed onions, and you have the ground for early strawberry planting, late peas, snap beans, beets, turnips, cauliflowers or early celery. Onions from sets are noor keepers in winter; they are apt to sprout, hence should be disposed of or used up early. Let seed and potato onions be the mainstay for winter .- Rural New Yorker.

He Had Tried It.

Two Hamilton citizens were toddling up street the other day, and the close and earnest manner with which they were seen to be in conversation clearly betokened that they were exchanging their experience with dis-

pepeis. "And did you ever try the hot water cure?" asked the thin man, as they paused at the melancholy man's gate.

"Did I?" repeated the melancholy man in a tone of sarcasm; "Well, I should say I did! Why, I've been married fourteen years,"

It is impossible to be a hero in anything unless one is first a hero in faith.

In the literary as well as military world, most powerful ability will often be found concealed under a rustic garb.

The Not of Harriage.

fancy, without a due consideration of the beautifully steered first from one rock, then make the advent of every great man posness and ill-concealed unconcern for one another. Each generally thinks the other most to blame. And I do not believe that I am overstepping the limits of appropriate language when I say that the idea of being caught in a net represents their secret convictions. Here is a disastrous state of affairs. In this country such a net cannot be easily broken. The pair have married for worse, in a more serious sense than these words are intended to bear in the marriage vows. What is to be done? I should very imperfectly express my advice if I simply said, " Make the best of it." For though this is where, it applies most in the case of those who are in the close relationship of husband and wife. Clouds sometimes come over the married life because too much consideration is expected. Show it, I would say rather than demand it, if it has seemed to come short. Do not think to mend matters by a half-gradging endurance, but ask God to give His sacred help to the keep ing of the rule, "Bear and forbear." So may a hasty marriage, the beauty of which has been spoiled by some misunderstandings, ripen into the true affection which should mark this holy estate, and the cloud of disappointment give place to a love which rests upon no passing fancy, but upon an honest Christian observance between man and wife of the vow between them made. So may the miserable afterthought of having been entangled in a relationship be blotted out and succeeded, as years go on, by a love cemented with the desire to do right before God, in whose presence and with prayer for whose blessing the relationship was begun. -Sunday at Home.

Satisfactory Eyidence

Among the many indications of a marked advance in temperance sentiment, there is none more satisfactory and assuring than the demand of the public for sound speech from the platform, and of logic and practical common sense, rather than sentimentalism and rickety building on Jackson street. twaddle. The time was, when to be a successful temperance advicate it was only necessary to have a fund of comic stories, and be able to mimic in word and act the drunk- ed tones. ard's reelings and gibberings, and possibly was indeed an evil, but with not the rebe made to contest the evil.

A New Gas-Light.

For the past three weeks the York departure platform at Euston Station has been lighted upon a novel principle—namely, with an incandescent gas-light. The light was invented by Mr. Lewis some two years since, but the present is its first public application on a commercial scale. Before, however, it was applied at Easton the system underwent careful trial at the coma square aperture in the door of a dirty and pany's works at Crewe, and it it answers expectation at Euston-which so far it has-it will no doubt be widley adopted by the Lozdon and Northwestern Company. The principle of the burner is the mixing of air under pressure with common gas, the light being produced by the incandescence of a on the part of the manufacturer. Then to escape. The power used at Euston for colored paper, rough frame work and other op gas-engine of two-man power, which is I was employed in an office in use there.
