FOR THE FARMER.

Fall Feeding Mowing Lands.

No farmer can afford to allow his cattle to feed off the growth of grasss in his mowing lands in the fall. It injuries the grass roots and diminishes the grass crop the year following, for more than the feed obtained is worth. It is cheaper to buy hay and feed to the stock in the barn than to have them feeding down the mowing fields.

Fertilizing Lawns.

Heavy dressings of stable manure carried off to sea. should never be made to a lawn. Not only does it present a very unsightly appearance when thus treated, but the dressing lying in lumps, as it usually does, is liable to kill out the grass in places, and greately injure the appearance of the lawn. When any dressing is needed, it is much better to apply in the spring, a light dressing of bone phosphate or guano.

Green Food for Poultry.

Green food is very necessary to the health of poultry. So eagerly is every green substance devoured by fowls that every green thing is destroyed in the hen yard, unless the yard is very large. It is well to have a large yord divided into two parts, allowing the poultry to occupy one division at a time. By ploughing the unoccupied division and sowing it to grain, a good growth of green food will spring up, which, when a few inches high, is ready for the hens, and will afford them an excellent quality of green food for. some time, and it will keep growing as fast as it is eaten off, While the poultry is eating this snpply, another growth can be started in the unoccupied portion of the hen yard, and in this way a constant supply of green food can be provided.

Keeping Apples.

A Pennsyvlania farmer who had tried various methods of keeping apples, obtained the best success by wrapping each apple in paper, placing in a barrel, and heading it. He bored holes in the top and bottom so as to allow a free circulation of air, and laid the barrel upon its side in as cool a place as was safe from the frost. The variety of apples was the Fallowaters. On the fifth of May he opened the barrel and found them in most excellent condition. There were only twenty specked and rotten apples in the barrel, "while the color was beautifully preserved, and the apples had a delicious flavor. Tney were fresh and beautiful in appearance, without any dampness or moisture. A gentleman present when the barrel was opened, pronounced them the best kept apples he had ever seen. The success seemed to be due to the fact that the paper absorbed all the moisture that was given off by the apples, while the holes in the top and air."

This is a method worth trying for preserving a few apples for home use, but evidently could not very well be practised for preserving large quantities of fruit. When large quantities of fruit are stored for preservation, the best method seems to be to keep down the temperature as near the freezing point as possible without chilling the fruit. Low temperature is the best preservative, and if it could be maintained near the freezing point until | ends. midsummer, there would be little difficulty in preserving fruit until that time. Some store in racks, allowing a free circulation of air, and others store in barrels closely headed up. Very good results are obtained by either method.

Best Way to Seed to Grass.

The old, and still too common, practice of seeding land with grass and grain at the same time may do underspecially favorable | the tissue waste faster, and a high authorcircumstances, as when the land is constantly moist, and the grain is sown thinly. It does better, too, in a cool, northern climate, or where the grain is removed late in the season, after the hottest weather is passed. In northern Vermont, at greatheights and the thirst which it we have seen oats being harvested late in | engenders that the Swiss have to thank September, and cut at that season for their wonderful drinking powers. The the grass is not so likely to be killed by other week the marksmen of Canton Vaud hot sunshine after the grain is removed. | held their annual rifle meeting at Pay-But in southern New England and west- nere, a picturesque village on the Broye, erly, on the same parallel of latitude, pro- and the local papers mention with somebably at least three-fourths of all the thing like pride that the shooters and their grass sown with grain is seriously injured | friends drank the place dry. by being grown with it. We find that Western farmers are learning that grass is | lands of Scotland, or any other mountain | a great tree, which had fallen upon him worthy of being given a better chance | land, and tried the experiment, knows | and held him prisoner until death ensued than when sowed with grain.

says that farmers in the West seem to be pays may be, than he can drink at home. coming to the conclusion arrived at in the This, it may be as well to observe, is East, that grass seeding is best when made alone. The reasons given are that "sowing grass seed with grain crops is on a par with trying to get two crops from the soil in the orchard. No land is rich enough to serve two masters, for either it will have one crop smothered in infancy, or the other choked and robbed in its old age. If you wish a fine catch of grass for a superior meadow, then follow the following: "Get the land in good tilth and well enriched for a crop of wheat, harrow the surface is perfectly pulverized, and sow the grass seed Farmers make the mistake sometimes of looking upon their cows as machines for producing milk and butter, forgetting that they are mothers every year, and their daughters are soon to take the places of their dams. In like manner, the grain crop is considered the main one on the farm, because this is sold and the grass and hay are not. Without the grass and the hay the grain would be

A Wisconsin farmer stoutly maintains that he prevents the ravages of the beetles in his potatoes by planting one or two porary loss of function or by myelitis, into a cavity in this earth, and become daxsfleein each hill. He says the bugs does occur in some instances.

light indeed."

will shun the flax every time, and that he has grown potatoes in this way for ten years and accured good crops when others failed.

Mr. Lyman has Stopped Swearing. The people of Lee Township, about seventy-five miles north of Louisville, Ky., are in a state of excitement over the case of James Lyman. Lyman recently moved into Lee Township. His family consists of a son and two daughters. In early years he was a seaman. When 11 years of age he ran away from his home in Boston, concea'ed himself in the hold of a ship about to weigh anchor, and was

to swear. As his years increased, his profanity became more voluble. His ship and in time became the master of four | who abstain from alcohol than those who different languages. In all of these he take some of it." was an adapt at swearing. The slightest trifle met with a volley of oaths. Let some one vex him and the air would be perfectly sulphurous with his wicked declamations. When excited his wrath was terrible, and few dared to remain within earshot, while curses and imprecations rolled with mighty vehemence from his

One day while superintending a force of hands in making a clearing, a silly accident threw Lyman in an excess of passion. Words more blasphemous than ever before uttered rolled from his fluent tongue while he danced about in a perfect paroxyem.

Suddenly the impious de'amations ceased. Lyman fell, face downward, to the ground, and was unable to move a muscle. A genuine thunderbolt or a bullet through the heart could not have despatched his senses quicker. Sight was destroyed, speech gone, and motion impossible. After thirty minutes' prostration he recovered slightly, but he was unable to regain his lost speech. His eyes strong laborers he was borne to his house, conscious condition.

look upon Lyman's calamity as a rightethat it was a visitation of the wicked | end. man's prolonged sins upon his own head.

Ice Skating.

sport? We trust not. But there is no question that runner-skating has been on the decline among us for some years. In Holland, Denmark, and Germany it is universal. There every body skates, old and young, high and l w, rich and poor. Probably its decline here arises from ness. neglect of our ponds. T ere is skating until the first snow, and af er that pains are taken in but few places to clear the ice. There are also no conveniences for bottom allowed the free circlustion of putting on skates, taking care of garments, effects. The Lancet says: "We have etc. It is both uncomfortoble and dangerous to skate in overcoats and cloaks. Garmany and other European countries the public ponds are leased by the cities to parties who, charging small sums to skaters, keep the ice clear and in good condition, and also provide the other facilities mentioned. It would be a good idea to adopt the same course in our cities, while in country towns the organization of skating-clubs might effect the same

the Swiss Can Drink Ro Much.

Owing to the small portion of moisture in mountain air and the low barometric pressure, evaporation is very rapid. Even after the heaviest rain the ground dries in a few hours. This quality of the air tends to make perspiration more profuse and the skin dry faster than is the case at lower elevations. There is greater thirst, ity has said that a man's tissue is the only thing which it is his duty waste, new tissue being out of all comparison better

It is probable this rapid evaporation

Everybody who has been in the High-A writer in the the Philadelphia Press, more whiskey, or whatever the vin du mentioned as a dry fact, not as an additionai reason for going to the mountains.

> At a recent meeting of the Neurological Society, Dr. C. L. Dana read an interesting paper on spinal concussion and its results. He thought the fact was now established that railway accidents produce severe shocks to the nervous system which impair its activity and sometimes cause hysteria. The sufferers are sometimes as much injured as though they had lost a limb or actually injured the spinal cord. The trouble is to determine how ill such people are, how much they are shamming, how much the prospect of damages affects them, and how many are predisposed to disease, for a road cannot be called to account because it does not provide perfectly for valetudinarians. | cinnati Lancet and Clinic that, having The term spinal concussion was, the Doctor thought, a misleading and often incorrect one-mental shock and physical bruising expresses the idea better. The prospect of partial recovery from these his health. It seems that these baths of shocks to the system is good, but not so good as regards complete recovery. According to the British Medical Journal there was last year an enormous less to the effective force of the army Will roller-skating supplant its parent and navy from intemperance. In the army 1,490 cases of drunkenness were tried by courts martial, besides over 4,000 convictions from crimes springing from excessive drinking. During the year 15,904 soldiers, or 102 in every thousand, were mulcted in their pay for drunken.

English physicians have had strong dis cussions of late as to the truth of Dr. Crichton Browne's report upon over brain pressure in schools and its pernicious grounds for believing that certain wellknown depravities which progress with cerebral exhaustion are on the increase among these overworked children. Dr. Browne's protest has the support of the medical profession, and, as a body, we distinctly endorse what he has said.'

In northern Siberia, if a young man desires to marry he goes to the father of the girl of his choice, and a price is agreed upon, one-half of which is then paid down. The prospective son-in-law at once takes up his residence with the family of his lady love, and resides with them a year. at the end of a year he still desires to marry the girl he can pay the other half and they are married on the next visit of the priest. If he does not want to marry he need not, and simply loses the half he paid at the start.

The use of arsenic is alarmingly on the increase. The researches of Dr. Draper and Profs. Wood and Austen show that it is extensively employed in wall papers textile fabrics, writing and printing paper, candles, toys, confectionery, playing cards, theatre tickets, rubber balloons and balls, sweatbands of hats, paper collars and bed hangings, and in amounts sufficient to cause sickness and even death. / Prof. Austen recommends a law prohibiting its use in all materials consumed or employed in the household.

Anton Warning left Chateau, M. T., a short time ago to get logs from the mountains, and not returning within a few weeks, search for him was made by friends, when his body was found beneath that he can drink with impunity much from starvation and cold. After the accident he had written a note and tied it around the dog's neck, telling the particulars of the misfortune, but the faithful animal would not leave his master, and was sitting on the body when it was found, nearly famished.

The public baths at Vienna are said to be the finest in the world. The building is situated in the heart of the city, and encloses a basin of 570 feet in length by 156 feet in width, and varying in depth to twelve feet. The enormous quantity of water contained in this basin is removed three times a cay. The whole establishment has accomodation for 1,500 persons. and is open from May 1 to Oct. 31, and from 5 in the morning until dusk. There is also a bath restricted to ladies, open from 9 in the morning until 1; and the Vienna ladies are especially good swim-

be familiar with the subject, for he went through the process sixty-eight times.

A doctor was lately brought before the German tribunals for having neglected to keep himself informed as to modern methods of practice. A servant who received a wound in the chest in April last died from septicæmia under the care of this doctor, who, despising antiseptic dressings, treated his patient according to ancient usages. The court held that "every medical practitioner should keep himself informed on the accomplished progress of sicence, and have an exact knowledge of modern systems of treatment. If these had been e ployed the patient's life might have been saved, hence the liability for negligence." The Court of Apreal sustained the judgment.

A curious phenomenon was observed recently at the London Zoo. A few weeks since a fine lioness began to eat her own tail. In one day she removed at her leisure about twelve inches, and after a brief interval she resumed her repast and swallowed some more. She was then placed in a very narrow box in the hope that something might be done with Lytton says that actors invite critics to the bleeding stump, and that she might be prevented from further assaults upon herself. But she was not to be denied. The tail has almost entirely disappeared, Paper from the yucca, a hairy plant and she has now directed attention to one own throat.

SCIENTIFIC.

A German botanist has given instances of the modification of plants by insects so as to produce new varieties.

A motor driven by small charges of gun-cotton is an English novelty. It is said to be applicable wherever small powers are required.

Successful experiments in distributing the electric light to great distances have been made in connection with the Turin Electrical Exhibition. A Siemens machine of 30 horse-power generated a current which was simultaneously used by several electric systems spread over a circuit of about 25 miles.

WIND WORK .- A gale at East St. Louis in 1871, according to Mr. C. Shaler Smith, overturned a locomotive, exerting a force of no less than 93 pounds per square foot. Below these extraordinary pressures Mr. Smith has instanced numerous cases of trains blown off rails, of 24 to 31 pounds per square foot.

PICTURES OF SOUND .- Some remarkable photographs of a pistol bullet in its flight—under the illumination of an electric spark—have been secured by may see over a Bunsen burner placed in Queen Victoria. sunshine, and has even obtained pictures light by air set in vibration by sound.

Money Vegetation-A short time since Paul Reinsch discovered several kinds of minute plants-including two algae which had before been unknowngrowing upon coins after having been incrustations of organic matter. A Hungrowths upon paper money, even the ing harness. cleanest specimens not being free from two new algae described by Reinsch.

THE THEORY OF VACCINATION .- Prof. Tyndall suggests that just as the soil may be so effectually robbed of some essential ingredient by one abundant crop, as to be incapable of producing another, so in the human system a parasitic disease may so completely exhaust the blood of some ingredient necessary to the growth and propagation of the parasite that the pro duction of a second crop in fatal or considerable quantity may be impossible. It would thus appear that protective vaccination or inoculation is simply the inand comparatively harmless disease germs to consume the material which might become food for similar in a more vigorous and dangerous condition.

gigantic creature of the same species was sent to the London Zoological Gardens from Cape Colony. The longest measurement of this worm yet taken reaches six feet five inches, its diameter being nearly half an inch.

·A Lesson in Astronomy.

They were young and romantic, and although the minute hand was pointing to 12 o'clock they stood upon the porch gazing at the stars. "That's Jupiter, dear, isn't it?" she

murmured. "Yes, pet, and that is Sirius," he replied, pointing to another star.

"Are you Sirius ?" she cooed. he kissed her several times. Then he pointed upward and said : "That's Mars, dove." "And that's pa's," she whispered, as
