FOR THE FARMER.

Why Some Farmers do not Succeed.

They are not active and industrious. They are alothful in everything. They do not keep up with improvements

They are wedded to old methods. They give no attention to details. They think small things not important. They take no pleasure in their work. They regard labor as a misfortune. They weigh and measure stingily. They are wasteful and improvident. They let their gates sag and fall down. They will not make compost. They let their fowls roost in trees. They have no shelter for stock. They do not curry their horses. They leave their plows in the field. They hang the harness in the dust. They put off greasing the wagon. They starve the calf and milk the cow. They don't know the best is the cheap-

They have no method or system. They have no ears for home enterprise. They see no good in a new thing. They never use paint on the farm. They prop the barn door with a rail. They milk the cows late in the day. They have no time to do things well. They do not read the best books and

If two farm hands, presumably competent, are set to work together, and one carelessly injures the other, the injured workman has no claim therefor upon the master. But if the master failed in the first duty ab ve set forth, i. e., if he hired a man whom he knew to be incompetent, er if he did not exercise due care to ascertain that the man was competent, then he, the master, would be liable for injury suffered through such incompetence by another workman, without fault on the part of the latter, To illustrate this point: Suppose a farmer hires a careless boy and sets him to driving a spirited team; if the boy by his carelessness allows the team to run away and injure another workman, the farmer will liable. He has here failed in his duty to exercise proper care in the selection of his employes. But if he had used the caution of an ordinarily prudent man in selecting a person competent to drive the team, and the man so selected had still proved careless and allowed the team to run away and injured a workman, the master would be relieved from liability for the damage done. - [American Agriculturist.

The Farmer's Station.

other day," remarked an official of a road | no window was opened, and the door was running into Chicago. "About three never seen ajar. At length a week miles beyond a certain station on our line passed, and a gendarme, thinking it there is a farm house by the side of the curious, pushed open the door. track. Just beyond the farm house is a Hitle creek, over which there is a small | tered; and there, spread all her length bridge. About four years ago some repairs were made to that little bridge, and, | composed body of the faithful servitor, of course, the bridge gang had put up a | who must have been attacked with cholesign-board, 'Run Slow' on either side ra and smitten with death just as she was during the day or so the bridge was weak- on the point of crossing the threshold to ened. When they had finished their work | seek for help or the last rites of the they went off and forgot the signs. The | priest. fact is, the boards had disappeared, and they didn't take the trouble to hunt them

Some weeks afterward, no one knows just when, those signs reappeared in their former places. Nobcdy knew who put them there or what for. Nobody cared. If the section men noticed them at all they thought the bridge men had done

It was none of the engineer's business why they were there—it was their duty to observe regulations, which required them to slow down at all such signs. Observe regulations they did. For about four years not a train had passed over that little bridge without slowing almost to a standstill. The culvert, for that's all it is, has been as safe as any part of the roadbed, and yet stopping and starting trains there has cost this company thousands of dollars. Yes, it costs money to stop and start trains. You are wondering how it all came about, of course. Well that farmer stole those boards and put them up at his leisure. For four years he has been going into the town or coming from it on our trains, getting on or off right at his own door.

It was a slick scheme, and how he must have laughed at us and enjoyed it all the while. But his game is up now, and the engineers are having their revenge by keeping up an infernal screeching of their whistles at all hours of the day or night whenever they pass that farm house.'

The Origin of Horse-Shoeing.

According to the Blacksmith and Wheelwright, it is evident that horses were not | sius ? shod in Egypt, Assyria or Palestine. The latter country was supplied with horses survey? by the Egyptians. Solomon paid 150 shekels of silver, equal in value to \$75, for each horse. This was a high price, the difference in relative value of a shekel and a given weight of wheat being con- for him.

aidered. Isaiah speaks of horses whose "hoofs shall be counted like flint"-a valuable quality where they were shoeless. The Syrians and Hittites were suppli d with Egyptian horses by Solomon, who thus turned an honest penny

by this means. Aristotle as d Pliny mention the covering of horses' feet in stony places to protect the hoof from breekage and wear, but it is probable that such a covering was a bandage or boot, and used principally on long journeys. Suetonius refers to the dismounting of Vespesian's muleteer to shoe his mules. Wrappings of plaited fibre, such as hemp or broom, were used, as was also leather. In Japan the horses have clogs of twisted straw, of which a large supply is carried on a j urney; when worn another is immediately applied. The American custom of shoeing would, no doubt, appear a barbarous custom in their minds. Capt. Cook re fers to the fact that the Siberians and Kamtechatkans use travelling socks for their degs.

Camels in old times were similarly provided. These boots were drawn on over the feet, and it does not appear that iron or other metallic plates wer nailed to the hoofs. Such boots were shod with metal for the rich. The mules of Nere were shod with silver; these of his wife, Pappœa, with gold. For less stately purposes mules were shod with iron. Homer mentions brazen-footed steeds, probably a merely metapho ical expression implying strength. Mithridates and Alexander experienced great difficulty with their cavalry, owing to the soreness There are duties of a master to men, of the feet of the horses in long marches which, if not faithfully performed, render | The first certain mention of shoes being the master liable for the injury resulting | nailed to horses hoofs is in the works of Emperor Leo. > In two respects the sheeing of horses in nails is undisturbed. The frog comes in contact with the ground.

A Cholera Tragedy

The outbreak of choiera at Toulen and Marseilles this summer has led to the papers printing many ghastly stories; but none have the element of lone liness and desolation more vividly outlined than an incident which happened at Toulon early in August. A. M. Berard dwelt there, with a wife and family, and on the epidemic becoming severe, left town to pro- | body. ceed to a safe country retreat. One old and trusted servant, a hale and hearty woman, was left behind, partly at her own request. and partly because she did well, she said, and she had no fear of the plague. She would prefer to remain, and the family acquiescing, bade her good-bye with a light heart. She went about her duties after they left as cheerfully as usual. The house was duly closed up, the shutters bolted, and only the great heavy front door, common in French houses, kept on the latch.

In a panic and plague-smitten city there is no need to fear that people will pry into each other's business; and so, although old Marie was not seen about for a day or two, no notice was taken of "We made a singular d scovery the | the occurrence. Day succeeded day, but

Statistics from a London. Directory.

The population of London is sheltered by 550,000 dwelling houses, and the area of streets and squares embraces 122 square miles. Every day sees an average of 160,000 strangers enter the city, and 123 persons added to the population; while each year about twenty-eight miles of new streets are laid out, and 9,000 new houses erected. There are 129,000 paupers, upon whom 10,700 police keep a close eye. The population includes 120,000 foreigners, more Roman Catholics than there are in Rome, and more Jews than there are in Palestine. Two thousand elergymen preside over 620 churches and 423 chapels, of which latter buildings the Independents have 121, the Baptists 100, the Wesleyans 77, the Catholic 90, the Calvinists 10, the Presbyterians 10, the Quakers 7, and the Jews 10. The number of cats kept by the people is so large (700,000) that "cat's meat" is daily delivered at the majority of houses. The 3,000 horses which die each week ara utilized to meet this demand.

THE UNSPEAKABLE TURE.

Bulgarians of Macedonia

M. de Laveleye in the Pall Mall Gazette: In an article which this paper was good enough to accept not very long since I suggested, in the interests of humanity, that from time to time a separate sheet should be published containing exact accounts of the crimes and violence practised upon the unfortunate rayas of Macedonia, and that a copy of this should be forwarded to all the members of every European Parliament to excite general pity for this ill-used population. While awaiting the execution of this proposal the editor of the Pall Mall Gazette kindly allows me to assert in his paper such facts as come to my knowledge. Of course, as my sources of information are but limited I am not acquainted with more than one tenth, perhaps not even with more than one-hundreth part of the atrocities committe on the Bulgarians of Macedonia. but I tell what I know. leaving others to add to the sad story. Here are a few recent fa ts: During the month of July lest forty-five murders were committed by the Turks in the district of Velesse (Kar pouli, Macedonia), and at Bitolia (Monas tire) sixty. Some of the most barbarous of these may be mertioned:

First-A band of eight men, headed by the bloodthirsty chief Feyzo of the vi lage of Tchernilistcha (district of Prilep) set out for the village of Negrlewo, and in the mountains attacked three Bulgarian sh-pherds of from 50 to 60 years of age, whose names were Naydo Tas eff Tcherenkewsky, Sowstcho Georgieff Teherenkewsky, and Christo Newkewsky. They bound them, cut off their ears and noses, and then by order of Feyzo, tore the skin off their legs, arms, and necks, calling out to them as they laid the veins bare to "bear witness before the prophet that we know how to shed Slav blood." After this their eyes were put out and they

Second-In the village of Podles, near to Valesse, lives a well-known assassin named Hamidaah. He acquired his farm (Tchiwlik), which, by the way, he forces the peasants to cultivate gratuitously, by violence. He met, the other day, a Young Bulgarian, about 25 years of age, and asked for the loan of his horse. The ; cung man informed him that the horse was just then at work in the enclosure. Enraged by this refusal, Hamidaah dealt the young fellow such a blow on the head with his gun that it killed him on the spot.

were cut to pieces.

to the herd of a Bulgarian straying in one of his fields. Without more ado he at once fastened the man guarding them to a tree and put five balls through his

Fourth-At Podles several Turks seized upon a woman whose husband was unfortunately in exile in Asia. They took her to their home, and most grossly | Smith cried to him, "For God's sake not care to face the journey. She was ill-treated and assaulted her. She com don't leave me to die alone," and Forrefused to seek out the criminals. The unfortunate woman dares not return to her viliage, and is now at Welles, supported by the ecclesiastical community. Fifth.—In the village of Vintchany the

Turks took violent possession of a young girl, and forced her to marry a Turk, living in the village. The latter treated her with extreme violence and ordered the girl to embrace the Mohammedan religion. The peasantry appealed to the authorities, who called in the police. and the complainants were taken off to prison. The wretched girl was among the prisoners, and was heard to call out in a voice quivering with emotion and agony :- "O God! are we handed over to tyrants, or have we a king to protect us? I have been torn from my family and barbarously outraged, and no one says a word in my defence." She was ultimately sent back to her home, but her assailants went unpunished.

Sixth-In the village of Nogilovo three Bulgarians were discovered massacred and their bodies most horribly mutilated. Their eyes were first put out, then their noses were cut off, then their hands and feet were amputated, and finally their arms were fastened behind them and their heads were cut off. These three unhappy victims were the village priest, a peasant who had brought him bread, and a passer-by who happened to be on the spot at the time of the crime.

Seventh-In the neighborhood of the village of Grasgo the body of an honest Bulgarian was found cowardly assassinated, and beside him lay his son grievously wounded.

Eighth—In one of the villages near Valesse a messenger, whose horse was walking behind him, was accosted by a Turk, who requested the loan of the horse. On the man's refusal, the Turk struck him dead with a blow on the head.

Ninth-In the villages of Nogayfzy and at Tcherivino, Bulgarians have recently been murdered by Turks, and in all these cases not the smallest effort is ever made to trace out and punish the guilty parties.

These atrocities are revolting to us, but the saddest part of them is the reflection that they are the necessary outcome of the situation, created by Europe's intervention. Formerly it was to the interests are the agricultural laborers-well; but since Europe has promised a better Government and an autonomy based on the principle of the most numerous nationality, the Mussulman's aim is to extermiwho opposed complete freedom being 70,000 words.

granted to Macedonia, is responsible for the great evils now weighing on this unfortunate country. It is, therefore, ber place to put a stop to all this, and t insist upon the Porte's observance of the stipulation of the famous twenty third article.

LOST IN THE SNOW DRIFTS.

Terrible Experience of Two Hen in the Coro ado Mountaine,

The first report of hunger, cold, and death in the mountains comes from Lagle county, near Denver, Colorado. N. R. Smith of Dotsero ster'ed a week ago last Tuesday with E bridge Fersyth and two teams from Dotsero for Coffeepot Springs for lumber and that night the storm began. On Sunday last the mail carrier reached Dotsero from Carbonate with the information that these men had not been seen since Wednesday, and as the storm had raged with unabated fury, it was known that something had gone wrong with the missing men. A relief party of four men was started at once, and after a struggle through the drifting snow and a furious gale of wind, they found Forsyth half dead from hunger and cold, and so weak that he was unable to move. When they asked for Smith the famished man pointed to a bank of snow some distance away and gasped: "He died yesterday morning, and, boys,

you are too late for either of us." The white mound was examined and

Smith's body was found half covered with snow and frozen hard. In Forsyth's clenched hand was a scrap of paper on which he had written with his benumbed fingers a brief word to his wife as fol

DEAR ADDIE: We cannot live another I want you to have everything. ROACH FOLSYTH

He was carried to Willow Springs and cared for. His feet are badly frozen, and he will be cripp'ed for life. Nathaniel Rochester Smith, the dead man, came from Rochester, N. Y. He was one of the pioneers in that newly settled region and had faith in its future. His brother, Henry R. Smith, lives in Salida.

Forsyth tells the following story: Soon after their start on Tuesday they killed a deer. When the storm struck them they thought it would be of brief duration, but on Wednesday they found themselves hemmed in on all sides by deep drifts, and they were unable to get fuel to replenish the'r fire. They were then left in the cold with only raw deer meat Third-A Turk found a cow belonging | to eat. That dey they saw the mail carrier in the distance on his way to Dotsero, moving along freely on snow-shoes.

could not, and they saw him disappear. | ing. The shock was not felt in the nor-Thursday morning the storm abated, and Government has granted \$5,000 from the Forsyth made an effort to get wood. He | national calamity fund for the relief of was weak and could hardly move, and the sufferers in the province of Granada, plained to the authorities at Welles, who syth dropped down where he was found lost at Alhama. Seven hundred and by the relief party. For three days fifty houses and church were destroyed they lived on snow and raw venison. Forsyth thinks Smith died some time during Thursday night, but he cannot tell exactly.

FACTS AND FIGURES.

An oyster produces 125,000,000 young oysters in the course of a year.

EARTHQUAKE IN SPAIN.

Feeple Passing the Night in Fields and Publ e squares.

Further details of the destruction cause d by the earthquakes in Spain have been received in a special despatch to the London Daily News At Antiquera. a small city in Andalusia, twenty-eight miles north-west of Malaga, five distinct shocks were felt during Wednesday night and Thursday. Every one of the seven churches in the city was destroyed. coffee-house fell to the ground while it was filled with people, and many of them were injured. Several other buildings were demolished, and many casualties are reported. During the whole of Christmas day and night the public squares were filled with people, and many of them were injured. Several other buildings were demolished, and many casualties are reported. During the whole of Christmas day and night the public squares were filled with people. who were afraid to re-enter their houses dreading a return of the shocks. At one time as many as three hundred people. were in one of the squares, kneeling on the pavement and praying for delivesance. At night many of them camped in the fields outsine the walls or in the old city, which is built further up the hill and was deemed a place of safety.

Later details concerning the earthquake show the damage to property and loss of life to be much greater than es first believed. The provinces of Malaga and Granada were the scene of the severest disturbance. Many parts of Albuqueros are in ruins, and 160 pearsons are believed to have perished. At Artenas del Rey forty persons were killed. Disasters are reported from other towns. slight shock has been felt in many places since Thursday. As far as known 500 persons were killed in Andalusia by the recent earthquake.

SERIOUS LCSS OF LIFE.

Official reports show that 266 persons were killed in the provinces of Malega and Granada by the recent earthquake. The population of Granada is still encamped in the squares, and the ricker classes ledging in their carriages along the promenade. The facads of the cathedral was seriously damaged by the shock. Many houses were destroyed in Jimena, and a whole family was killed in the village of Cajar by the falling of a chimney. Over half the inhabitants of Albunuelas were killed. Alhama is MOSTLY IN RUINS.

The province of Malaga suffered equally as much as Gianada. Commerce is paralyzed. Two hundred houses at Alfaren-They tried to signal him, but they etzo were damaged, The panic is subsid-With this failure their last hope died. On | thern and north-west provinces. The FURTHER DETAILS.

Later advices show that 300 lives were and 30 per one killed at Periana. The town hall and many houses were damaged at Trrox, and the inhabitants fled from the town panic striken. It is now estimated that 600 persons were killed in the province of Malaga, including those killed at Alhama.

FRESH SHOCKS.

Fresh shocks, more violent than the first, have occurred at Trrox and Alhama. The panic at those places has been revived.

The Proposed Saharan Sea.

With reference to the daring French project for flooding the desert of Sahara with what would be virtually a new sea, it may be well, says Engineering, to recall the opinion expressed by M. Elisee Reclus, that at one period in the world's history, the desert was covered by a sea very similar to the Mediterranean, and that this sea exercised a very great influence upon the temperature of france, as comparatively cold—or at any rate cool winds blow over it, while now the winds which prevail in the great expanse are of a much higher temperature, and are, in fact, sometimes suffocatingly hot. The appear ance of the desert seems to support the theory of M. Elisee Reclus, that it was at one time the bed of a sea of considerable extent, of which the great inland African lakes recently discovered are pos-

sibly the remains. The present vast extent and configuration of the African continent would also appear to support the conclusion that at one time it comprised a less area of land than it does at present. The serious question which arises, assuming that the theory of M. Elisee Reclus is substantially correct, is, What will be the effect of the creation of a second African sea in the room of that which has disappeared? Would the temperature of France, and possibly even of England, be again reduced? It is a geological theory that in the glacial period of the world's history Great Britain was covered with ice and snow very much as Greenland is at prewas invested in Southern manufacturing. France and Great Britain, which rolled A well educated person who possesses the ice over so many hundred miles by the realization of a Saharan Sea would be much more than counterbalanced by
