But, as it was, she was uite used to loing the errands, which gened. The State had tried rally lay in the direction of the saloon; for he state of his finances made this an every. meal, and were made better by it? e Union. The lowest a lay necessity. Her mother was a young w \$1,000, and there is no soman yet, but so broken up by poverty mined yearly by vote to and self-respect, until she was fast growing e New York Tribune says: good a patren of the saloon as her drunk. temperance legislation is the extra size of the pitcher; it must carry e system of annually sub- mough for two.

vairst an angle of one of the cheerless brick uildings which lined the street, trying to , now stationed at Fort store feeling to the poor hands. No one oticed her. People were too much engagd in forcing their way through the wind and now, and reaching home—those who had a out it is simply enormous come-where warmth and light and love ncle Sam's army is taken waited them. The homeless ones eking some place of shelter; there were pen doors even for them, [if only in the laces where little Meg and the rest found of the pay given by the medrink. Presently a big dog sought shelter the same ange, and, seeing the pitcher, otion to drive iim away; she had no fear his caring for saloon drink; and somehing like a smile crossed her cold, little face he pulled his rose quickly out again, with moffled sneeze, and trotted away.

By and by thechild took up the pitcher ad started on, but it was colder than ever, nd the fingers were stiff again before she new it, so, with just a slight jostle from a ager at the next crossing, down went her urden with a thid. Now the advantage a thick ugly pitcher was apparent, it did ot even crack. To be sure, it had not very r to fall, as Mer's hands were not very igh above the payement. But, alas for the rink! A dirty, jellow streak in the snow as all the sign it left, as it made all haste

Meg was not given to crying. Experime had taught her the vanity of such a rury, but she stood above the wreck in tate horror, not during to go home. Her ther had been too ill to work for some ays, and the money left from last pay day ad dwindled until the had taken the last ent to pay for the drink now buried under he snow at her feet. She began in a dull ay to wonder what was to come to them ll now, when a large man in a great coat, during the prevalence of with his face so buried in a muffler that he ould see nothing so far below his eyes as om Iceland to the ferce tile Meg, came rushing over the crossing, nd, before he could stop himself, knocked toa, in the East Indian he child down in the drifting snow. le gathered her up in all tenderness, hower, and then stooped to look into her face. was the man who kept the grocery on the orner opposite to the saloon, and he rememered the child, who had occasionally come to his store for some small purchase. She as just such a bit of misery to-night, that s heart was touched, and, taking her up his strong arms, pitcher and all, he car ed her into his warm store—"Just till you law out, child !" he explained.

Quite an odor came from the old pitcher it, too, grew warm, and between a whiff two of that, and the bits of information eg imparted, he soon learned the state of iairs with her.

Never mind. I'll fill your pitcher with mething better than it has ever carried !" aid he cheerily ; "just watch me now." ad Meg did watch his every move eagerly. int he began to search his pockets. He Ma large man and had large pockets. inally he found a certain piece of paper. g wondered why he did not take some the brown wrapping paper on his countas usual, but she was afraid to ask any his boxes, made a little package of saw a boy of ten on the opposite side of the A little heap of sugar was soon wrapped street. second piece of paper, from another ocket, and, while Meg's eyes were growing onel. and, a little can of condensed milk was ken from the shelves. The grocer placed jug? here three packages side by side on the ounter, while he took the old pitcher and whed it thoroughly, inside and out; then who wouldn't." hid them in it.

Next he opened his glass case and took some rolls; they were warm yet from bakery, and Meg was quite wild with ditement as these, with some butter, and bree little white cakes with sugar on, were rowded into the generous pitcher.

hile I boy here to take care of the store jug was dashed in pieces. hile I carry your pitcher home. You mat not spill it twice in one evening; it ould ruin your reputation, you see." And debt so merrily that Meg laughed too hat out loud. I can't begin to tell you hat an unusual thing that was for her to

There was a long earnest talk in the bare little room, after Meg's eyes were The number of licenses to and trouble, that she had lost her courage tightly closed for night-a talk which encouraged the poor, broken mother in one more effort to make a home. The paper at this steady increase in an husband. This, you see, accounts for wrapped around the tea had proved to be a temperance pledge, and about one of the other packages was a paper written over ion of licence or ne licence Meg stood close by her pitcher, braced with good words of hope for the most hope-

> "I will be a man yet, wite, with God's help," said the father, as he signed his name to the pledge, "and you will be a happy woman again. The look she gave him was all the answer he needed.

The grocer came next day with more packages, and, in a long talk with the sick man he learned the sad story of his downfall, and then of last night's new resolve. He came again and again, as he was needed, and health and happiness came with him for all the inmates of the home. Time has proved at his nose in it. Meg did not make a the sincerity of that father's repentance, and his little Meg, being no longer the slave of the old brown pitcher, has grown to be a merry little girl who has quite forgotten the miseries of her babyhood, and who counts the kindly grocer her best friend.

#### Tommy Tough's First Voyage.

"Oh, Ma, who's that big man up there?" "That's the captain, Tommy."

"What's he up there for ?" "That is his place, up on the bridge." "What do they call it a bridge for ?" "Because it goes over the deck."

"What deck ?" "Why, Tommy, the deck we are standing

on. Don't be so silly.' "Can't he ever come down?" "Whe, Tommy ?"

"Why, that big captain." "Certainly he can; whenever he likes." "But you said that was his place." "Well, so it is when he is on duty."

"What duty?" "Why, on watch; taking care of the

"Is it his ship?"

"No, dear; it belongs to a company." "Company of real soldiers?" "No, certainly not; how abourd you

are! A company of business men."

"Can they sail for nothing?" "I don't know; I suppose so."

"We can't, can we?" "No, dear."

"Why not?" "Because your father does not belong to

the company. Now, be quiet. Oh, look at that ship !" "Where?"

"Why, right there." "Where is it going?"

"I don't know. Do be still. I've

headache. "Is there a captain on that ship?"

"Yes." "Big as ours?"

"I don't know. Now stop talking."

" Ma."

"Well, what is it now?" "I feel real queer-kinder sick." "Mercy sakes, Tommy! Why didn't you say so before? Come, hurry and let me

The Panama Canal

In the "Contemporary Review" for March an article on the Panama Canal, which bears very harshly on M. De Lesseps, the energetic Frenchman who undertook to construct the great work across the isthmus connecting the two American continerts. which unfortunatly collapsed for want of funds. Nothing succeeds like success, and had De Lesseps been able to complete his great scheme, perhaps, the writer of the article in question would not have been a severe. The Suez Canal will always stand as a monument to De Lesseps' indomitable energy and perseverance, and that his later project has fallen through, for a time a least, is perhaps, due in a measure to that very energy which led him to consider the engineering difficulties (which the progress of the work, so far as it has gone, showed that he was quite competent to overcome) rather than to give due consideration to the financial aspect of the scheme. At all events it seems unfair to charge the engineer of the canal with a desire to "revolutionize trade routes," and to show a disposition to rejoice over his failure to change the current of trade, for does not the same censure, if there is any reason for it in his case, apply to every projector of a canal or railway. And why should trade routes not be revolutionized? Is the business world to remain at a standstill and not keep pace with the progressive ideas of the nineteenth century ? | the Calliope was seen to be going upon the The main object of the Panama canal is to reef. She was within a stone's throw of it, shorten a great trade route and to save the and had only one anchor left. Her only long passage around Cape Horn and thus possible chance was to slip the remaining enable vessels bound for the west coast of cable and try to steam out. This she did America or the east coast of Asia to take their cargoes to their destanation without breaking bulk. He must be entirely out of accord with the spirit of the age, or actuated by selfish motives, who objects to the construction of a great work on the ground that | would have driven her into fourteen knots an it will "revolutionize trade routes."

what the New York "Times" says, quoted she got outside of the first reef, which she by the writer in the "Contemporary." That journal attributes "scandalous extravagance and carelessness' to M. De Lesseps. I am not sufficiently acquainted with the methods adopted to raise the money to say whether the charge is true or not, again and lost all her boats, part of her but the fact remains that while the estimat- spars and her upper works. As the speed ed cost was placed at \$240,000,000 the sum of \$250,000,000 has actually been expended, with a large floating debt of unknown attempted to drive them out. amount, while a recent report of the Columbian Government states that only one fifth of the necessary cutting has been done. These facts preclude the possibility of the canal paying, if it should be completed, and lessen the chances of the money being advanced by the French Government, or any one else, in order to save from absolute loss what has already been put into it. As for the probable traffic, De Lesseps estimated it at 7,500,000 tons a year, but English and American engineers have expressed an opinion that it cannot exceed 4,000,000 tons.

The company having the work on hand having collapsed, the question arises, Will the canal ever be completed? De Lesseps has always been hopeful, but he is now an old man, the public have to a large extent lost confidence in him, and it is doubtful whether he can do anything more towards carrying to a successful issue his pet scheme. The only hope seems to be that the original investors, having become reconciled to the loss of what they have put in, will consent to abandon their claim, and that a new com-

as a gift, will complete the work. Meantime the project of a cut through the isthmus is likely to be realized in another way. Attention has long been turned to the San Juan route as a favorable one for water communication between the Atlantic and Pacific oceans. Lake Nicaragua and the San Juan River almost cut Central America in two, the distance between the lake and the Pacific being less than twenty-nine miles. The wonder is that this route has not been utilized long ago. The only objection to it appears to have been that it would involve a canal with locks, while De Lesseps proposed to have a tide water canal, which he had subsequently to abandon for one with locks and a somewhat uncertain water supply at the summit, an objection which does not hold good in the case of the Nicaragua route, where the supply of water is unlimited.

A Bill to authorize the construction of the Nicaragua Canal has been passed by Congress, and the matter is now in the hands of a private company, which proposes to undertake the work under concessions from the States of Nicaragua and Costa Rica, and in pursuance of treaties entered into between those republics and the United States. Very careful surveys and estimates have been made, the collapse of the Panama scheme having taught the promoters that the utmost | visited a wealthy banker.

care must be exercised. The distance from ocean to ocean by the proposed route is 169.8 miles, of which 561 miles is by lake, 841 miles by river, and only 28 8 by canal. The greatest cut through rock is three miles long, with an average depth of 120 feet. The length of the Panama Canal is about forty miles, all cr nearly all of which would be cutting. Lake Nicaragua, which forms the summit, is deep and unobstructed, has a watershed of 8,000 out. square miles, and with that portion of the summit level in the San Juan river to the east and the cut to the west will afford 152 "I don't see anything so very strange miles of clear navigation. The principal structure as the dam on our own Rideau Canal at Jones' Falls. A recent survey also "But he's got a jug," persisted the col- provides for a dam on the Pacific side, which will reduce the cutting to eight and onehalf miles through a low divide, and three miles at the ocean level, or eleven and onehalf miles in all. The summit level will be 110 feet above the mean level of both oceans. and this will be reached by three locks on the east end and a similar number on the west. The dimensions of the locks will be the largest vessels afloat.

J. J. BELL. A DESPERATE RISK.

How the British Man-of-War Calliope Got Out of Apia Harbor.

Naval-Cadet George Logan, son of Thomas A. Logan, a well-known lawyer of Cincin nati, and one of the survivors of the Samoan disaster, reached home the other night. In speaking of the escape of the British war ship Calliope, Logan said that after the German ships Eber and Adler had been lost It was the last desperate resort, and it was only successful through the skill of her commander, and the fact that she was modern and powerful ship. Her engines were put at a speed that in smooth water hour. As it was, she was driven against There is a little more show of reason in these terrible seas for over an hour before

> would have caused her destruction. She was two days at sea and experienced a terrible time. She was washed again and of no other vessel in the harbor exceeded ten knots, it would have been suicidal to have

barely escaped, and during that hour she was

only forced ahead one knot. A little mishap

"The Calliope," said Logan, "in order to keep to the channel in going out, steered di rect for the stern of my ship, the Trenton, veering only at the last moment to clear her. It was a moment of terrible suspense as we saw the hugh ram of the Britisher towering above our decks and making direct for us. It looked as if she was going to cut us in two, and had she done soevery one of us would have been drowned for a certainty.

"As she swung off, almost within touchcaptain of the Callions said those cheers his men, who were almost ready to give up. slightest hesitation. As she sheered off Admiral Kimberley sighe made no attempt to get out of the way.

to the Calliope to coal with and then gave army surgeon. one to her. In return the British commandthey were, as the men were living on canned meat and cocoanuts."

Pardonable Under the Circumstances.

### THE GREAT AFRICAN FORESTS.

Enermous Extent of the Timber Region, s Part of Which Stanley Describes.

The great forest through which Stanley 246 000 square miles, is only a small part of south of the Congo at the great northern bend of that river, and the country embraced within the big curve is covered with a compact forest, the towering and widespreading trees shutting out a large part of the sunlight.

In these forests, completely shut out from the rest of the world, live hundreds of thousands of people who are almost unknown to the tribes living in the savanna regions outside. Scattered through the big woods within the Congo bend are little communities of Batwa dwarfs, of whose existence the traveller has no inkling until he suddenly comes upon them. Here also, along the Sankuru River, are the tree habitations described by Dr. Wolf, where the natives live in huts built among the branches to escape the river floods. It was in great clearings made in these forests that Kund and Tappenbeck discovered some of the most notable villages yet found in Africa. where well-built huts, with gable roofs, line both sides of a neatly kept street that stretches away for eight or nine miles. These villages are even more interesting than the street towns in the more sparsely timbered regions south of them, which were regarded as very wonderful when they were first discovered by Wissmann. It was his account of these villages that led Bishop Taylor to choose this part of Africa as the goal he wished to reach.

Last year the Commercial Company, which is investigating the trade resources of the Congo, sent its steamer, the Roi des Belges, up the Ikatta River into this great timber land, and the explorers described the country along the banks as "covered with an almost impenetrable virgin forest. It is a veritable ocean of verdure, from which emerges here and there a wooded mountain." Greenfell penetrated the forest for long distances on several southern tributaries of the Congo, and on the upper courses of these rivers he sometimes found the wide spreading brenches forming a complete roof above the astram.

#### Faithful Buffaloes.

Every country boy knows how devoted ing distance, an involuntary cheer was given | the domestic cow is to her young, but, acher by our men, followed a moment later by | cording to Colonel Dodge, the female buffathree cheers all together. Afterward the lo, incredible as it seems, shows scarcely a trace of maternal instinct, and when frightsaved his vessel, as they put new heart into ened will run away from her calf without the

Approaching sufficiently the Trenton thirteen sheep, and welcome near, he discovered that they were all bulls, standing in a close circle with their heads outward, while in a concentric circle of some twelve or fifteen paces distant sat at least a dozen large gray wolves, licking their chops in impatient expectancy. These wolves, with the exception of man himself, are the

> The doctor determined to watch the performagee. After a few moments the knot of buffalo broke up, and, still keeping in a compact mass, started on a trot for the main herd some half a mile off. To his great astonishment, the doctor now saw that the central and controlling figure of this man was a She was the only female child, and she poor little calf, so newly born as someonly to

be able to walk. After going fifty or a hundred paces it lay circle as before, and the wolves, who had trotted along on each side of their retreating supper, eat down and licked their chops again.

The doctor did not see the end of the affair, for the hour was late and his camp distant; but he had no doubt that the noble fathers did their whole duty by their offspring, and carried it safely to the herd.

# Bored by a Dunce.

The late Matthew Arnold was bored once during a long journey by an ignoramus who would talk literature to him. Arnold would not dispute with him; but, when, with the portentous seriousness of one who has discovered a great truth, he said, "In my op-"I didn't like it at all. I never have had inion William Shakspere was a great poet," with the only admirer of my favourite poet." "Why aidn't you leave the theatre? A story of a different kind is told of Dr. You certainly could have got up and gone Oliver Wendell Holmes. Travelling down to Gloucester once, he was dragged into a I thought I'd like to know the size of yourn. But what bothers me is, my head's the biggest of the two !"

He Proved the Fact.

A mufti once read in a learned book that every one who wears a long beard is a fool. Now the mufti's heard was long. He decided to shorten it; but, as no barber was at hand, and, of course, no scissors, he was forced to try what the flame of his lamp would do. Accordingly, grasping the beard with his hand, at what he deemed a reasonable distance from his chin, he put the tip into the blaze. Up flew the fire and burnt his fingers; and, when, in an agony of pain, he plucked his hand away, the flames completed their work over cheeks and crown. Then the mufti realised that he who wears a long beard is a

An absurd story comes from Victoria, B. C., that the Canadian fishing schooners proposed to go armed into the Behring sea seal fisheries. We will acknowledge that our fishing countrymen up yonder have not received their mede of attention and fair play, but their own shrowd common se surely be trusted to prevent them from committing any foolish act that may lead to immediate bloodshed and subsequent conse-
