BY D. T. MOORE.

may enter spring in a thrifty condition. All into many materials grown or used on the kinds of stock pay for being kept clean, warm and well fee, and they need more than ordinary ears to bring them safely through the winter. Liberal feeding is the first requisite in wiftering from from the first requisite in wiftering from the first requirements. appetites keen with frequent change food; a change will often give animals appetite then overything olse fails. Remember that, animals well y thered we had ball animals well y thered we had summered," and then the neglect them, at this critical juncture. Every barnyard should have conveniences for feeding and watering, and an abundant supply of pure water have conveniences for feeding and watering, and an shundarbamply of pure water. Horses should not be too constantly confined in close, warm stables, as they kecome tender, and subject to colds, etc. They need daily exercise, but should be well blacketed when left standing in bleak places. A team will not be injured by steady work through the winter if well fed, properly groomed and kept from undue exposure. Horses used on slippery roads should be kept properly shoul. Cows may be safely milked tolerably close to calving if the milk is good. It is usually enough if a cow gorsedry one month. Incoming cows should be well sheltered and have generous rations of forage and bran, but no heating fool, like corn or meal, for two or three weeks before calving. As the cows come in select the best hiefers for raising and sit others for the butcher. The young stock, and all others infested with lice, should have the skin rubbed with a mixture of sweet oil and kerosene in equal support reads should be kept properlyshol.

Cows may be safely milked tolerably close to calving if the milk is good. It is usually chose to calving if the milk is good. It is usually committed to the commendation of the well sheltered and hun, but no heating food, like corn or meal, for two or three weeks before calving. As the cows come in select the best heifers for raising and fit others for the butcher. The young stock, and all others infested with a mixture of sweet folland kerosone in equal, in the stock.

Geese and ducks are very partial to cook-lice, should have the skin rubbed with a mixture of sweet folland kerosone in equal gain. Such food is better for them than it too much grain, 5.

Sheep need an aummance of wholesome tool; plenty of pure hir, and a dry yard and sheeping quarters. A warm stable and plenty of roots will conduce to the health of breed-ing ewes. Early lambs can be made to pay ing owes. Early lambs can be made to pay good returns in May or June. Farmers having a good market for highes and leavest should see that they are well cared, for and fed that they will prove profitable when at the right age 16 shaughter.

Swine, well bred, and fed, pay extra dividends. Breesting lows now deed good care and room for exercise. Store viges should be well housed and fed to assure thrift. Light and frequent meals up best, for profitable growth. It is good economy to give swine clean, warm quarters at this season, with an, warm quarters at this se iberal rations and plenty of litter. Poultry should now have extra co eggs bring good prices and broilers will s command "cash money." An authority haves that eggistan only be expected from lowly that are "tat home," in a warm, dry home, provided with abundant food both green and they lime, gravel and pinte valer. As we have before advised, a good methator, well managed, pays; but don't undertakt actional batching unless you have a reliable artificial hatching unless you have a reliable machine and can give the business proper

THE PECEOP. lee is the great winter product country, the only staple crop that and matures in frigidity—and simply the labor of gathering and storing. Yo The sooner this is done the better—for it is well settled, that jee should be harvestee without delay when it reaches a sufficient thackness. This varies according to the jour of the country is which it is produced, but the weather has been so frigid that ice and

No timepiece is perfect, and there are means on carth of keeping perfect time. The stars, however, furtrade."

It is known that Emin has begun to carry
out this policy. When last heard from he
had established a station at Tabora another
to Victoria Nyunza, and was founding some
of his lesser posts. He was having some
trouble with the al establishe. at Victoria Nyanza, i

from Belring Strait and from the neighbor hood of the new Siberian Islands to the se-on the other side of the Arctic circle, be tween Spitzbergen and Greenland, Thi current certainty passes, north of Fran certain hight stars with an instrument const of Greenland, is an extension of this known as the meridian circle!

This instrument consists of a delescape mounted on trainions like a canton, and apported by a pier of solid masenry. It is so arranged that it can be directed toward any point on the meridian but count be pointed away from the meridian like. On looking into the cycpiece of this telescoptione sees a series of line paralled lines, running north and sputh across the field of view, the middle line marking the meridian.

Whom a time observation is to be made, the observer first selects a suitable star from a printed star-list, which gives the exact time at which each of the principal stars crosses the meridian. Her then sets the telectore, at the proper point on the over diffus. It is my purpose to start from a printed star-list, which gives the exact time at which each of the principal stars crosses the meridian. Her then sets the telectore, at the proper point on the over diffus to list of the run of the control of the control of the control of the control of the sets the telectore, at the proper point on the rectifing the drift ice. I shall employ a captive balloon. By the use of this balloon I to intercept the star, and putting his eye to the exact of the sea for a look distance around the ship. When we can no longer push through the circ with the healts in his letter key which he healts in his letter key which

onnected with in electro magnet a such more that noy signal made either by operator of the clock, causes the pen to the operator of the clock, causes the pen to make a mark on the paper.

By examining this paper the discrete is able to tell, within a tenth of a second, the time which the normal clock inticated when the star crossed the merdian.

Comparing this with the time taken from the star-list shows the crop of the clock. A summaring to the call for the star-list shows the crop of the clock. The Household Prize. 135 Adelaide St., W. Toroute "Your reliable preparation, St. Oil, has proved a benefit to use

the star-list shows the error of the clock, comparison is then made between the state that allowing for the difference between in and sidered time, shows the error of

Mr. B.'s arrival that he had written some poetry ad I intended to submit it to Mr. B. as Southag's and inquire in which of his pelems the lines occurred. At the proper moment, therefore, after the guests were seated he began.

"Friend B., I have been a good deat puzzlet of late trying to fin I in Southby's poems his well-known lines running thus, (quoring his own lines.) Can you tell usalout what timeline wrote thein?

"I do not remember to have met them before," replied Mr. B. "There were only two periods in Southey's life when such lines could possibly have been written by him."

"When were those?" gleefully explained, the witty guestiones.

"Southey-leve," said Mr. B., "about that early period of his life when he was having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and entring his first teeth, or near tho close of his life when his having the measubes and experionestal physician; who had an experionestal physician; who had an experionestal physician; who had an experionestal physician; who had any display practice with univary free for years in his dally practice with univary free his for years in his dally practice with univary free his for years in his dally practice with univary free his high and ye precisely practice with univary free his high and ye precisely in that triefs in those constituents which had an experionestal physician; who had ply practice with univary free his day years in his dally practice with univary free his high and years in his dally practice with univary free his high and years in his dally practice with univary free his high and years in his dally practice with univary in his

carly period of his life when he was having the meastes and cutting his first teeth, or near the close of his life when his having the meastes and cutting his first teeth, or near the close of his life when his hrains had softened and he had fallen into idiocy. The percentication belongs to the meastes period, but the expression clearly betrays the ididiction.

"Solveylerce," said Mr. R., "about that early or carly the rived of his life when he was having the measless and entiting his first teeth, or near the close of his life when his hardins had softened and the hold falten into his yer. The close of his life when his hardins had softened and the hold falten into his yer. I had the early be trays the idition."
