markably generous in its return to the farmer. Moreover, under the best method of segding the land to grass or clover, or both, this is found to be the most favorable crop of all that may be used for this purpose. As compared with wheat, which is commonly considered the most chacting of all the grains on the soil, we find that an average crop of oats takes more fertility from the land than an equivalent yield of wheat. This is shown by the following figures taken from the Ro-thainstead reports, showing the composition of the dry matter of 45 hishels of cats and 30 bushels of wheat respectively; Outs. Wheat. Pounds. Pounds.

It is thus seen that 3,978 pounds of grain land than wheat. The result is that one very rarely finds a really good crop of oats, and the quantity as well as the quality of this grain produced per acre is rarely of any profit to the grower. And yetsome growers do secure excellent and most profitable crops of this grain by the best method of culture, based on the requirements of the plant. We read of, or sometimes are a yield of seventy-five or eighty bushels to the acre of grain weighing nearly twice the average of the ordinary crops, and there are is good many cases in which oat are really thelmost paying crop glown on the farm. The reason why this is uncommon is first, that its character as an exhaustive crop is, not generally

And thus the liberal freatment of this crop, was returned in the law succeeding ones. A farmer of New Bibbowick reports, that the use of 112 periods of intrate of soda alone, ave him a reld of 14 bushels of 41 pounds to the bash, which is equal to 82 bushels of 32 pour is, Without the nitrate the yield was, inly 36 bushels of 33 pounds.

But West good shable manure alone is mostly the source. yield was only 36 Dishels of 33 pounds.

But were good shable manure alone is supplied liberafly the yield is always satisfactory. The writer has grown, from fresh seed of Camalian growth, welghing forty-five pounds to the highel, over seventy-five bushels of grain; by facasure, and, of fully equal weight, which is equal to something over 105 bushels per acre of legal weight. In this case the lam was plowed in the Fall, the manure was sured on the space and selection.

Examine Your Seed.

Few farmers apprecate fully, the losses that occur by reason of imperfect seed. A case in point may be given. The writer had propared four acres of land at a cost of \$10 per acre for nanure and fertilizer, for acrop of mangels. The seed was procured from one of the leading seed lealers in full confidence of its good quality. But in the exercise of reasonable precaution the seed was carefully examined, when it was found to have been completely lestroyed by mice that had eaten the seeds out of the capsules. In a hapdful of the capsules there were only a few seeds, left. And the whole twenty-four pounds, which cost \$12, was in the same condition. Had the seed been sown and this discovery act leen made, the crop prepared at this large cost would/have been a complete failure, and no evidence would have been found to place the cause of it. No doubt the failure of many crops may be explained in the same way. The failure of grass and clover seeding is quite common, and how many of these disappointments may be due to this cause of worthless seed; These seeds are not trustworthy after they are two or three years old, and who can tell without a test if the seed is really able to

germinate? Every farmer should test the seed he is about to sow now before it is too late, by germinating a sample in a saucer with wet sand. The experiment stations

and not be too careful, for it is too true that as a most better to the state of the milky mothers of the heritan bank we sow as hall we reap.

The Feeding Problem.

The Feeding Problem of Feeding In the State Post of Feed In the Javan House of Feeding Problem of Feeding In the Feeding Problem of Feeding Pro

that with 150 pounds of this fertilizer he has made eighty-four bushels, of grain of forty pounds to the bushel per acre, which is more than 160 bushels of the legal weight of 22 pounds. But, inaddition, he says to the wheat following was a fine crop, and the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the clover was simply grand. It is one of the company a post of the company is post was returned in the was exceeding ones. A farmer of New Browsiek reports that the use of 112 points of intrate of soda alone gave him a field of it bushels of 41 pounds to the bush , which is equal to 82 bushels. No one, therefore, will wonder that the boat, having been in the water two hours add thirty minutes.

Deprived by Law of Arms the East India The out crop is one of the most useful of all the small grains, and under the best cultivation may be made one of the incert profitable. But its requirements are not sufficiently at the case will understood we find that it is equally exhaustive of the isolias any other grain, but while it requires good feeding it is remarkably generous in its return to the farmare. Moreover, under the best method of seeding the land to grass or clover, or both; this is found to be the most favorable crop of all that may be jused for this purpose, As compared with wheat, which is commonly considered the most case into the fault the use of a magnifying of all that an average crop of oats takes more fertility from the land than an equivalent yield of wheat. This is shown that the experiment stations have done some good work in this way at an example and a sample in a saucer with wet sand. The experiment stations have done some good work in this way at an example and a saming, and in several case was an example and a wasning, and in several case was not good. This lesson should not be lost.

Another fault of seed of this kind in the mixture with pernicious weeds. These was often found to cover the land under new seeding, and the farmer wonders were for found to cover the land under new seeding, and the farmer wonders was not good. This lesson should not be lost.

Another fault of seed of this kind in the mixture with pernicious weeds. These was often found to cover the land under new seeding, and the farmer wonders was of acquiring lethal weapons. They have onting for it therefore, but to trust everything to official protection, and this, it appears, sometimes proves anything but as agginated to be the circumstance. But the cause will be found to be geding the land to grass or clover, or both; the presence of the weeds in the grass and clover seed that has been sown ungained to be considered the most favorable crop of the seed in this way. One cannot be fertility from the land than an equivalent yield of wheat. This is shown

seed on the renylatement of the plant. We have the complete the plant of the plant

caplained in this way. As the clover, contains a large, quantity of every element in the contemptuously as fur-traders, and have employed at the least 500 points of a complete fertilitier should be applied. Touching letters "do faire part" were sent to the mombers expressing the club's regret at the death of a faithful servant, and almost all the members were present at the funeral services in St. Stephen's, Vienna. On their return the committee opened the deceased secretary's safes and drawers, and found that the man that the that he wised the

Little more than two years ago the British community of St. Petersburg were greatly excited about the sudden and mysterious Science about the sudden and mysterious lisappearance of Miss Harper, a young English lady living in the city as a governess. She happened to have an aunt also living in St. Petersburg, and one Sunilay evening left her aunt's house to go to see her sister, who was visiting Russia at one of the large hotels. This was the last seen or heart of Miss. was visiting fours at one of the large hotels. This was the last seen or heard of Miss Harper, and the most stringent investigations gave not a shadow of a clue ss to her disappearance. The matter ceased to be talked about, but has suddenly been revived by a clue just found by the police in searching the barracks of the Horse Guards. As is known, several murders have been brought home to this regiment, and, amongst other articles, a prayer book wit! Miss Harper's name has been foundin the barracks. The conclusion to be drawn from this discovery is too horrible to contemplate, and arouses a feeling of intense abhorrence in every mind. There is no doubt that the nearest road from the house to the notel is past the door of the barracks where the outrages have occurred, and the spot is a lonely dark one. this was the last seen or heard of Miss Har

PEARLS OF TRUTH.

The web of our life is of mingled yarn, good and ill together. Our virtues would be proud if our faults whipped them not, and our crimes would despair if they were not cherished by our virtues.

How easy is the thought in certain moods of the loveliest, most unselfish devotion: How hard is the thought in the face of a thousand unlovely difficulties?

Nothing ampars more surprising to these.

The Beoret of all with a millionaire said "the wealth" is in the word. Style archive in the word of the loveliest, and there are simply wonderful.

Blic. in all shades, is in the late.

Nothing appears more surprising to those who consider human affairs with a philosophical eye, than the easiness with which the many are governed by the few.

A brave man thinks no one his superior who does him an injury; for he has it then in his power to make himself superior to the other by forgetting it.
