masons and thirty-live, terra-cotta setters were continually at work. The enormous quantity of iron and steel used in this new mode of construction, which was only first tried six years ago, has created quite a new industry, and the employes have already their organization under the term architectural iron-workers. Steel has now almost entirely taken the place of iron, of which the first few of these tall buildings were constructed. The foundations are tiers of steel rails embedded in concrete, the beams stretching ten feet or twelve feet ander the street. This plan was found necessary on account of the nature of the soil, so as to bear the great imposed weight. These heams are made at the Illinois steel-works, or come from Pennsylvania. This new

or come from Pennsylvania. This new method of building is said to be lighter and stronger than the did system, and to be absolutely fire-proof. The greatest variation in the plumb-line from base to top of these tall buildings has been found not to exceed lialt an inch.—Excellence alf an inch. -[Exchange.

Miss Florence Nightingale on Husbands and Wives.

Miss Florence Night ingale contributes the following to the disclission in the Daily Telegraph on English wives:—"I endorse what an 'Irish Wife and an Irish Spinster' says. Irishmen are more sympathetic, more true to their wives, and in my opinion, we should hear of less unloved and unlovely marriages, less of the divorce courts, if Englishmen showed more sympathy and interest in their wives. Women need more—and I spic k from a weman's standpoint of view—than the conventional husband, who judges his wife from the care she he and Wives.

of view—than the conventional husband, who judges his wife from the care she bestows upon his household and his children. We need some one we can lean upon, and if a wife wishes to welcome her husband with a bright, smiling face, knowing she has nothing to hide, nothing to fear, and nothing to conceal, she can only do so in the 'perfect love' which 'casteth out fear,' Irish women are far more virtuous than perfect love' which casteth out fear. Irish women are far more virtuous than their English sisters as a rule, and I believe it is in the main because there is prore oneness between them and their husbands. Those little attentions, those little words of love are not lacking in an Irishman which are so dear to every woman's heart, and more particularly so when she is tired, and harnssed with household cares; and these words, so often withheld, would softon a wife's monotonous duties and help to make English hones.

This Bleetrie Age.

In 1000 Gilbert recorded that other boddes besides amber had electric properties.

The first electric machine, a globe of sulphin, was made by Guerické. 1647.
Glabe globes for generating electricity, med by Newton and others, about 1675.

In 1720 Stephen Gray discovered that electricity acts at a distance.

Bose introduced a metallic conductor for the electric machine about 1733.

The Leyden jar was invented by Kleist in 1745, the battery by Winckler.

Franklin's theory of electricity and lightning domonstrated in 1652, by means of a kite.

Water decomposed by Cavendish by means of the electric spark in 1787.

A gold leaf electrometer was invented by Bennett in 1789, and subsequently improved.

Madame Galvani noticed the

Madame Galvani noticed the movemen

Madame Galvani noticed the movements of frogs' muscles in contact with metals in 1789.

The first galvanic battery constructed by Galvani; in 1791, after many experiments. Experiments on animals were made with galvanism by Fowler in 1793.

Davý, by the use of carbon points, produced the first eldetric light in 1802.

In 1815 numerous improvements in the voltaic battery were made by Wollaston and others.

In 1815 Wollaston, by means of a powerful "thimble" battery, ignited platinum wire.

wire. Electro-magnetism began 1819 with Oersted's discovery of action on the needle.
Galvanometers invented by Ampere in 1820. Many improvements made by later Ampere's experiments with magnets and spiral wires were begun in 1820.

In 1820 Arago magnetized a needle by a battery wire and attached iron fillings.

Ampere employed the needle, coil and galvanic battery in sending messages in 1820.

Ronalds gave the world an account of his telegraph perfected about 1820.

Wheatstone's "enchanted lyre," the first telephone, invented and used in 1821.

telegraph perfected about 1820.

Wheatstone's "enchanted lyre," the first telephone, invented and used in 1821.

Faraday enunciated his theory of electromagnetic rotation in 1822.

The first electro-magnet, in the form now used, was made by Faraday in 1825.

Faraday produced a spark by separating a keeper from a magnet in 1831.

Magneto-electric machines first were made in Paris in 1832, in London in 1833.

Telegraphs invented by Schilling in 1833, by Masson and Morse in 1837.

Wheatstone in 1837.

Wheatstone in 1837.

The Giant Kits

. . Five weeks ago father, (Phil-

ander Hydo,) was very low and not expected to live but a short time. He was in such agony that we had to give him norphine to relieve the tarrible pain from which he was suffering. The doctors had given him up. They said there was no help for, him, and my dear father longed for death as being the only certain relief from his sufferings. One day he saw in the Albany Journal an account of how a man by the name of Quant, living in Galway, Saratoga county, and who living in Galway, Saratoga county, and who was afflicted like father with locomotor ataxia, had been very greatly benefited and depths," but required to be humored and to "played."
It was a little inclined to bob and dive, and to race or bolt, sidewise.
It was toward the end of September. One day the wind blew heavily, and we had a great deal of sport. Four strong boys could have held the kite at any time, I think, if they had placed themselves in a good position; but several times it "got us on the arun," and we had lively struggles to secure ground hold again.

Mr. Hyde walked into the sitting room and taking a seat said he would willingly tell the story of his zickness and cure, and had no objection to its being, published, as it might be the means of helping to relieve others whose sufferings were the same or similar to what his had been.

His story was as follows:

Westmituster berisje van beilinesty litten was a service of the extreme of the extraction of the extra prejudice against it. But we were far from satisfied, and resolved to try again another year, taking advantage of the experience that we had gained in our experiment, and remedying the defects of our first "giant lite."

and morphine in great quantities,
and morphine in great quantities,
"It was while father was in this dreadful condition that we saw in the Albany
Journal the story of the miraculous cure of
a Mr. Quant in Galway, Sarstoga county,
by the use of Dr. Williams' Pink - Pills for
Pale People. We hadn't much faith, but
we felt that it was one duty to the in initiatiant. The guides refused to go further, and my friends lest courage; but I determined to proceed, with or without them, and the proceed, with or without them, and the decided to go on. A fine, ice is mined to proceed, with or without them, and the decided to go on. A fine, ice is the bone.
