

YOUNG FOLKS.

The Early Owl
An owl lived once in a hollow tree,
And he was wiser than who could be.
The wise old owl could see on the tree of knowledge grow,
And an owl's nest in the hollow root.
And he hooted—hoo!—that day.
He chanced to hear, in a casual way,
Make up a feather he never heard.
Was flying to bed in the dawning light,
When he heard her singling with all might.
"Hear me, here, for the early worm!"
I will sing it up! It were so late;
I shant sing at dusk to investigate.
To bed, to bed, early to rise!
Make up a feather, steady
So, I'll make up a feather all day,
And went to work in the dusky light,
And went to work in the dusky light.
Hooted for the early worm!

CONQUERED WITHOUT A SHOT

Mr. William MacGregor Galvin, the Major General of the rebellious forces of Ireland, has been better friend's than that Sanx and Sam think justice had not been done Mr. Jones. He had treated him honorably and asked him to go to him. It was a good man to deal with. It was the conduct which soured and made him suspicious. I do not know how that is. I only know that Sam Fisher finds in Mr. Jones a kind master and a faithful friend.

HEALTH

The Hygienic Treatment of Filaria

An English physician gives some practical suggestions on the national treatment of filariasis, disorder, hemophrosis or piles, as follows:

"Once it is established that a patient has piles very much may be done to give relief and operation in a considerable proportion of cases. Diet and exercise are of first importance.

"Stimulants should be avoided—the completely to be avoided—and fruit eaten more freely.

"The action of the bowels in a sick person, while others are relieved by oatmeal porridge, is best relieved with mallow molasses.

"A decoction of the bark of the root of the natural aperient waters or a tassel of castor oil, two or three teaspoonfuls of certain may be given in the morning, or may be taken in the evening.

"The mixture may be gained by a draught of a mixture containing one ounce of drachmas of sulphate of magnesia, a few drops of citrate of soda, a few drops of senna, three grains of quinine, a few drops of citrate sulphuric acid, and syrup of senna.

"This decoction may be given in the morning, or may be taken in the evening.

"The patient should be given a glassful of cold water, milk, or some other water of warm milk, in early morning.

"Those failing, an enema of half a pint of oil of sassafras, glycerine, may follow the diet.

"Morning ablations, cold or tepid, cold or tepid, are also useful, and are very effective in bringing the system into action.

"The advantage of beginning early to train the right mind to do what can be done in life by constant effort, can not be overestimated.

"To remove those traces of worry and irritation which so disfigure the face, the patient should be given a glassful of warm water.

"The patient should be given a glassful of warm water.

"The patient should be given a glassful of warm water.

"The patient should be given a glassful of warm water.

"The patient should be given a glassful of warm water.

"The patient should be given a glassful of warm water.
