out the fator tops, and one of usil get indictions, and one of usil get indictions, and one of usil get indictions of the other to kiver over nice and comfortable in a jiffy. With a bit of green over your head you can breathe pretty well. I've tried it. Now, for the draw."

With—the next forkful of rubbish he both exactly the same size, about an indiction of the the case of the color with in a jiffy. With the next forkful of rubbish he both exactly the same size, about an indiction of the color with the colo inspired and earnest. Every atom of tim

ousness has evaporated. Marvels of the Under World. The mystery of the under-world appeals with irresistible force to the imagination. Tales of the wonders concealed in caverns and hidden under the ground have always interested the inhabitants of every country.

interested the inhabitants of every country. And the strange and splendid scenes frequently discovered in such places as the Maminoth Cave, the Luray caverns, the sea caves of Bermuda upit the Blue Grotto of Capri have lent wings to the famey which pictures still more marvellous spectages. Interest the organism of the part of the p rictures still more marvellous specificles underneath the ground."

As a matter of fact it is probable that we are as yet acquainted with but comparatively fow of the specious caverns that exist at

water exists beneath the surface of the ground, and that even considerable streams are flowing there. Mr. Baldwin Latham has lately called attention in England to a very interesting method of tracing the courses of these underground attachments. courses of these underground streams.

At certain seasons, especially in Septements of the card October, peculiar lines of fog may be observed close to the ground, and he says these indicate where streams of water are flowing at a considerable depth, beneath the surface. During the greater part of the year as some of the strata between the surface of the earth and the underground water are sufficiently cold to condense the vapor arise ing from the water and thus prevent its appearance at the surface. But in the autumn the soil is frequently warmed so deeply that no condensing stratum of cold exists, and then the vapor reaching the surface, the concealed streams of water underneath. It is suggested that here is another of those curious provisions of nature which benefit the living forms inhabiting the earth; for the vapor which proceeds from streams deep underground, being ordinarily condensed not far under the surface, may serve to sustain the life of plants during seasons not drought.

YOUNG FOLKS.

e is a funny little girl, who reads me every most surprising travels from a volume pool, Anddroadfulsavage men who build great cities

boy, who just then ambled up, casting green glances of any upon the tempting brown and yellow slices fast disappearing down two narrow "red lines." For this sen of Africa, who, had breakfasted very lightly that morning, was painfully conscious of an inward craving in the region of the waist-band, while his "sweet tooth" seemed suddenly possessed with a jumping toothache. But if hunger sharpens the appetite, it sharpens the wits as well, and, instead of whining out a pitcous appeal for a crumb of charity, in the manner peculiar to the professional beggar, this worthy namesake of the Bible falsifier came to an abrupt stop in the middle of the road and held. the Bible falsifor came to an abrupt stop in the middle of the road, and hold up both ands in horrified amazement, exclaiming of Well, well, bress my soul 1. Ef you chill-

it.

"I mean what I sez," replied the wily I youth, "Ain't you nober heard tell ob a pie tree?"

"Why,—no!" and now the tiny pair drow near in curious wonder. "Is there really such a thing?"

"To be sho dere is! To be sho! And I 'low you is drefful iggerant not to know dat!"

"Den jest you borrow de biggest, an' mext week you kin return two for one." prompted the shrewd Ananias, who already saw prospects of a delectable meal floating with the roads running through these subjusted the shrewd Ananias, who already before his mental vision; while a few more ingolic to a delectable meal floating was prospects of a delectable meal floating was prospects of a delectable meal floating was prospects of a delectable meal floating was prospected the shrewd Ananias, who already before his mental vision; while a few more ingolic may also a describe the may Nanaimo boast of the most pictures eque rural secrety, and sylvan drives on the salar of Vancouver, rivalling even those of famed Victoria, intensified by evidences of trural prosperity and contentment, the homes of sober, moral, horny-handed, first dustrious, law abiding people standing out in marked contrast as an example to other localities as a place, where tho exciting, in sidious vaporings of reatless spirits or the indicated of the lost paling of a protecting inclosure.

"Now, we mustn't look at it for three days," remarked-Juan, as he hammered in the last paling of a protecting inclosure."

But, then, we can make a Thanksgiving and Christanias for every one in the neighborhood. Oh, won't it be fun! and how surprised and pleased ma will be!"

The mouth of July, 1893, is expected to mark a new ora in the manufacturing world, for the Cataract Construction Company hope to have their mamment turbing wheels and monster dynamos at work for those who may desire to use their power. More than \$2,000,000 and many lives liave been sacrificed to this gigantic undertaking, this harmossing of the mighty Niagara to serve the manufacturing world, and the enterprise is now, after nearly two years work, drawing near completion. Nowhere in the civilized world has any hydraulic work of such magnitude been attempted. Nowhere is there wheel pita 100 feet deep and wheels capable of developing 5,000 horse power.

An important move has taken place this work in the awarding of the contract for the water wheels. The building of two of these immense turbines has been placed with J. P. Morris Company of Philadelphia. The contract calls for two superimposed turbine wheels of 5,000 horse power each, to cost in the neighborhood of \$100,000. They are to be set up and in operation eight mouths the neighborhood of \$100,000. Liney are to be set up and in operation eight mouths from Nov. 1. They will be built after the designs of Messrs, Faesch & Picard of Genova, Switzerland. Each wheel is composed of two superimposed turbines, supported on in the state of two superimposed turnings, and the state of two superimposed turnings, and the discharge is exterior. This 5,000 horse power is an impense unit for a turbine, for the largest heretofore known in this country is 2,000 horse power. Nothing has every before been built to equal these contemplations of the state of monsters. The moment the wheels are its set and ready for the water the dynamos will be ready to be connected and electrical from power will be produced, the transmission of which is to form one of the chief features of this great undertaking. Cities at a displication of the chief features of the great undertaking. Cities at a displication of the chief features of the great undertaking. Cities at a displication of the great undertaking. A glimpse at the surplines and dynamos. A glimpse at the surplines and dynamos. A glimpse at the surplines and dynamos will process of construction are 18 feet while, 140 feet long, and 160 feet deep. The company is constituted in the surplines and the contracts for three wheels, and another will be added to these just ordered. The contracts for the dynamos will be let.

THE GREAT NIAGARA TURNEL

Two Turbine Wheels of 3,000 horse Power to be Put in Operation Rext July.

A Niagara Falls, N.Y., despatch says:— The mouth of July, 1893, is expected to nark a new ora in the manufacturing world,

another will be added to these just ordered. The contracts for the dynamos will be let within sixty days, and they will combine features of the best ever constructed with new devices.

A view of the great engineering work reveals the fact that the main tunned has been A view of the great engineering work reveals the fact that the main tunned has been driven and entirely bricked in. The large inlet canal from the viver has been constructed. This is 1,500 feet long, 200 feet wide at the mouth, and tapers up to 125 feet wide at the cond, with a depth of from 11 to 15 feet. There are ten inlets or gates for the wheel pits of the Cataract Construction Company, over which their power house will be con-

structed.
There are two gates for the Niagara Falls Paper Company, which has the largest plant in the world. There are two more inlets between the paper company's works and the power house. These fourteen inlets are on the west side of the canal. On the are on the west side of the canal. On the cast side are six inlets, and two more will be built. Thus the canal at the start provides for the gigancic sum total of 146,000

whites for the gigancie sum total of 146,000 horse power.

The work of the portal of the tunnel is not yet completed, but is progressing slowly and airely. A story was started last week that an additional tunnel or extension was to be built of over fauft or. This is not so. It is simply an old contract let a year and a half ago in connection with the conand a half ago in connection with the construction of the inlet canal. When this piece of work is driven, the original 7,000 jet of the tunnel will be completed. The contractor has now between 300 and 400 men at work, and the exercisting and construction are going on steadily. struction are going on steadily.

On the other side of the river, on the On the other side of the river, on the Canadian shore, a duplicate of this great work will be constructed. No work has been commenced on this as yet, but it is expected that operations will begin in the spring. Some 100,000 horse power can be developed there at one quarter the exponse required on this side. With this commons amount of power ready for use, the demizers are expectant that in the future it will not only be the manufacturing centre of this only be the manufacturing centrer of the country, but the manufacturing metropolis f the world.

erit and Bravery Rewarded and Dishonesty Very Severely Puntshed. The customs and regulations nest commonly observed on hoard a lonecancer are worth noting. Every pirate captain, doubt-less, had has own set of times; but there were certain traditional attietes that seem to have been generally adopted. The cap-tain had the state cabin, a double vote in elections, a double share of body. On some vessels it was the captain who decided what ers of moment were oftener settled by a vote of the company, the captain's vote counting for two. The officers incl. a share counting for two. The officers fret a share and a half or a share and a quarter of all plunder, and the sailors one share each. Booty was divided with scrupplous care and marcoming was the penalty of attempting to defraud the general egupeany, if only to the amount of a gold piece or a dollar. Every man had a full vote in every affair of immortance.

ars, fingers and toes. In chase or battle the wealth the pirates are reported to have been evere upon the point of honor, and among coberts's crew it was the practice to shift the

hat way once the formulable time of the igites is not eyen asthetic, it is movely omic. No imaginative essayist discusses gracy and fine art; but Paul Jones is resurrected as the hero of a musical burle quellow Paul! 'And he is almost the only one that adada languagement or year a burst flow. the whole bucoancering race whose story scovers a trace of the legendary gallantry pracy. Paul, whose father had been head relence its Leaf. Subject had been head

pupe of dilucated thes Madamo P tti has a fan on which are The world's production of gold in 1891

A rattlesmake will not cross a hair rope, perienced campers, when they fear that tlesmakes are around, encircle their camp h a hair lariat or two and feel secure

1892 IS WELL IN ADVANCE
