able up in savage majesty against the shift in the west.

I herer knew the moor was so grand death that the west.

I have seen a rugged stone in Italy that is worn quite, smooth on one side with the kisses of passionate pilgrins. I, too, must have become less harsh under the enderness and corrects rudeness and corrects rudeness and corrects rudeness and seeds that the state of the corrects rudeness and corrects rud sales confortably, now I can get on with a face beggars hiddle. Now I can get on with a work confortably. No need to bother the labout her for awhile."

And probably I should not have bothered the land more if things had gone on in a same course. But the very next day mathing happened to rene my anxioty. While I was on a ladder knocking out a sacior my joist, Hebe came and called in appening alarm through your control of the control of t Hut the alteration in her physical condition was scarcely less marked, and there was no ascribing that to subtle design. The dark lines in the orbit of her eyes gave place to a healthier tint; her face grew fuller and changed the expression of resigned endurance it had hitherto borne to cheerful expectancy. Often I found her beautiful eyes and mouth animated with a smile of satisfaction.

"Oh, it is good to feel well!" she oxclaimed, one day, impulsively; she told me she had not felt so strong for years—ohlior many, many years! "It must be the simple diet, the pure air, the occupation of

she had not felt so strong for years—oh lefor many, many years! "It must be the simple diet; the pure air, the occupation of our quiet life," she added. And I had counted upon this quiet life wearying her to despair; upon the daily drudgery and despair; upon the daily drudgery and despair; upon the daily drudgery and despair is upon the despair in the onsciously she was elevating me to her own

egree. She was proud of her bread, which im

been a very inviting figure, there armed with my chisel and my face whitened with the dust

My journeys from the cottage were full of dread to her now, believing as she did it that I stood in danger of recapture. No to matter how late I returned, I was sure to find her sitting in the living room. She to conomized the fuel to put off the day when I must hire a cart to bring a fresh supply, and herself suggested that I should not get it again at Newton for fear of creating susmicion.

this to say objection to my steams of any objection of the beans began to show through the brown dition of things was renewed.

"So that by just lighting the lamp you wantly of all the living creatures about the struck me as being fridiculous, with I awoke to a perception of its pathos; those creatures to her stood its pathos; those creatures to her stood in the place of her lost children. But if she found pleasure in her own pursuits, she was more wonderful than anything you have invented yet awhile; Gregory, she said, with fresh admiration.

"It's curious," I admitted, with a fatuous pretende of care, essess, though the blood

miration of my achievements; slie watched their progress, and tried to enter into all the details that occupied my thoughts, only too delighted if she found herself able to the said in the toto in he said in the sai

" [Vashing! I must think about that too. We can't always be using new things."
"No, that's what I thought. I'm finding out which is the best way. Here's an account of how the Egyptians did it—a whole history of washing; but the continental system recens to me most reasonable in principle."

"I know something about that," said sho, drawing a chair close to mine, and seating drawing a chair close to mine, and seating

a the night I crept stealthily down loft, under the conviction that I penal lock of the cottage door being core pressing dread of a general blow up).

when the water boils, the steam wing practically no vent, would press on the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force it up the surface of the water and force in the bottom of the tub, and then, as soon as it boiled again, the same process would be repeated. Thus you would do automatically exactly what is done by your old women with their ladles."

"That seems very wonderful," said Hebe, still fantly hoping.

"Wonderful! It's as simple as A B C. And then when the linen is sufficiently cleaned, it can be taken down to the brook and laid among the rocks till it's rinsed and ready to lay on the heater to dry."

"But wouldn't the steam get away through the holes in the bottom of the tub?" she asked, studying my sketch intently.

"That's what I call intelligent criticism," said I, highly delighted to be faced with an objection that I could over coma. "On the face of it would seem so. But you will find that the soaked linen opposes a greater resistance to the steam than the water that

the face of it would seem so. But you will find that the scaked linen opposes a greater resistance to the steam than the water that is free to flow up the pipe."

If you are not afraid of spoiling the tub, might we not try it?"

We will try it. I'll go and get a length of thhing—inch will be better than five. of tubing-inch will be better than five-eightha-to-morrow night. You're out of paraffin."
Oh, there's enough to last until the end of the week," she said, with sudden

of the week," she said, with sudden anxiety.
"May as well fetch it to morrow as then, Besides I want some half-inch brads.
I was about to crunch up my sketch, but Hebe rescued it; and some time afterwards I saw, it neatly felded in the box with her butter money. I made the washing apparatus, and spent the whole of one morning watching it at work, Hebe as delighted as I whenever the

When I went in to tea I saw one of the When I went in to tea I saw one of the volumes with a piece of paper marking a place, Opening it I found the article marked was "Water," and on the paper cortain notes—"An imperfect conductor of heat and electricity"—and the like, showing that she had been trying to acquaint herself with a subject that interested line. She saw that I was pleased.

saw that I was pleased.

"I have not come to the part about its not rising above its own level," she said. The part about its not rising above its own level," she said. The principle of the part about its not rising above its own level, she said. The principle over in my head, and I think I'll lay on the water as you suggested. It's horrid going down there after the rain."

"Or in it."

"Yes, that's worse; and it would be an immense saving of labor." mmense saving of labor."

The moment seems opportune to advocate the value of blood-letting in heart fai are. Such an operation, carried out on a publiciplation with promptitude, and dispatch on a syncopal chairman or lecturer, would be enough to secure a popular reputation for the operator, especially if by good luck the victim survived the ordeal."

"It's curious." I admitted, with a fatuous pretence of ccarciesness, though the blood was tingling in my veins with an excitement only known perhaps to inventors.

"But if it's so simple, why hasn't it been done before?" she asked, still marvelling over the plan.

I had to admit that perhaps it had been done before? but to this day I am ignorant of the simple contrivance being practically applied.

"You must make that, Gregory," my wife said, tenderly. "Not only will it be useful to us, but because it will give us fresh interest in life."

This gratified my pride; it ought to have touched my heart.

"I've never tried my hand at practical mechanics," I said, forgetting my assertion that I had been a watchmaker. But she marked the contradiction. I misunderstood the look of triumph in her eyes at the time; I understand it now.

"I might be able to do it," said I, turning again to my drawing.

"Oh I know you could!" she exclaimed:

"A dallant British Officer.

practical result has been an increase of nearly 400 per cent in the former average of smuggled merchandise." In their encounter with the wily outlaws of the Sierra the incompetence of the French recurs was, indeed, apt to become pitifully evident.

On one occasion a troop of forty smugglers passed the cordon of pickets without a shot fired by sheer dint of cunning and superior check. In order to test the vigilance of the senties it had been made a rule that the hours and half hours of the night must be called out by the Corporal of each bivouac guard and repeated from picket to picket all dlong the line. In the small hours of a specially dark night

THE SENTRIES

hear St. Sauveuse, in the department of Haules Pyrences, called out "Three o'clock!" fifteen minutes too soon, but with a distinctness, that awakened hundreds of responses and roused a hornests' swarm of wrathful non-comparisoned of the swarm of the state of the swarm of the sw sponses and roused a hornets' swarm of wrathful non-commissioned officers. Angry discussions failed to reveal the cause of the untimely vociferations, and a few minutes later a gang of shadowy forms passed the line within a fow steps of a bewildered recruit who had come to the conclusion that in a world of mystifying contradictions, sildence was, on the whole, the best policy.

In the neighborhood of Gibraltar a lively trade in British merchandise is going on by land and sea in spite of all precautions, es trade in British merchandise is going on by land and sea in spite of all precautions, es pecially northwest of the harbor, where the lock coast favors the escape of the little sailboats engaged in the prepressible troffic. Larger vessels can be searched upon their crivial at the Spanish ports, but out at sea they can not be prevented from watching their chance for dropping little packages wrapped up in oilcoth and bouyed by means of car's strips. At peep of dawn these floaters are picked up by fishing smacks, provided with "tips," that enable them to get shead of the revenue cruisers—not to menahead of the revenue cruisers—not to men-tion the wholesale transactions favored by tion the wholesale transactions favored by an occasional sea fog.

But the largest trade in contraband is that of the Upper Nile, where whole caravans of smugglers run the blockade of the Egyptian trontier guards in broad daylight. The enormous extent of the thinly populated border defies all vigilance, and the British Consul at Khartoum estimates that the number of slaves smuggled across the Soudan border will exceed 12,000 a year.

At The Bank. Depositor: "Is the cashier in?"
The Porter: "He is, ma'am, for years. Perhaps th' assistant cashier'll ma'am, "—[Pearson's Wash." Will Probably Dig It Up.

Rivers— "Somebody, I see, has been defacing your front fence."

Banks—" Where!"

"On theinside, just over that snowdrift."

"Why, Rivers, I cut that noth myself, That's where I er threw my moore nipe New Year's Day."

BRIEF AND INTERESTING

The Government Labour Bureau catablal ed at Sydney has proved a success. number of enemployed there has dimin from 13,000 to 3,000. Levery Englishman is supposed to know the English law; but since King John t signed Magna Charta some 20,000 public statutes have been passed.

Slaves are just now very dear in Arabia. £50 is paid for able bodied men from 25 to 35 years old, and £150 for likely young women from 14 to 20 year's old. The Prince of Wales receives \$600,000 a year, and by the very lowest computation he is compelled by the demands on his purse, which are inseparable from his position, to spend nearly \$1,000,000 a sear , In Madagascar a dissatisfied hustand has

only to give his wife a piece of money, and say: "Madame, I thank you," and according to the laws of Madagascar, he is divorcod straight away. The turkey is a native of North America. It is said to have been introducil into England, or reared in a domestic state, in the reign of Henry VIII. It is said that the latest fad of his Majesty

the German Emperor is the possession of a piano, the case of which is entirely over-laid with plates of stag-horn. Itis said that Sweden is losing gr the world's markets as a producer of iron, owing to the improved methods which have been adopted elsewhere of late year A farm of 600 acres in Hampshir, Eng., with fine buildings attached, let at only 5s. an acre; has just been vacated by a farmer,

at such a low rental. The German Emperor has directed that a portrait of his Empress shall be hung up in every/barrack-room throughout the impire, so that sentinels may recognise her belittingly. The telephone service in London is, per-

haps, the worst in the world. The number of subscribers in London is only object 6,000, whilst in Berlin, a city of about onefourth the size, the number is 18,000 Few people in the world have a more goreous sleeping couch than the President of the French Ropublic. It is a splendid structure of carved clony, and stands in the centra of the bed-chamber in his palare at the Elysce. In the United States there are forty-four people in every-hundred who are engaged in agriculture, as compared with fitty-six in Canada, seven in England, sixteen in Ger-Germany has some very rich mer

the province of Sicilia alone there are six great hobles worth more than \$2.5,080,000 cach. One of these is the Prince Pless, whose son married Miss Cornwallis West, The latest gossip about the Promier, is that he thinks of having a pecial telephone laid on to Downing street, so that he can hear the Home Rule debates—and, indeed, all the proceedings of Parliament—without the excitement and fatigue of the Chamber.

The English walnut is said to be this most profitable of all anut-hearing trees. When in full bearing they will yield about 385 pounds of nuts to the tree. The nuts sell on average at about 4d, per pound. If only twenty-seven trees are planted on a care, the ineque would be about 4135 per acre.

In the Roman States there were, at one time, professional assassins who would a man for ten seudi, provided they were permitted to give him time to say a prayer; but if required expressly to kill him without any notice, the strain on the science was such that they required louble the money.

An Apple Mennove Pre. This is a spontion as a pie with a postry code of expectably delicious. Line a deep with a postry code of the specially delicious. Line a deep with a moderately rich crust then proposed of one lemon and adding the juice was proposed to sweeten the juice with a man for ten seudi, provided they were permitted to give him time to say a prayer; but if required expressly to kill him without any notice, the strain on the conscience was such that they required louble the money.

Playmaking would appear to be an expected to the proposed of the proposed of

the money.

Playmaking would appear to be an extremely profitable branch of American industry if an author has once succeeded at it. Some half-dozen American playwights easily average 25,000 a year, and Bronson Howard, who stands at the top of the profession; half-or some years maternated early fession has for some years past made nearly three times that amount.

three times that amount.

There is nothing that more intensity delights her Majesty than to have her tiny grandchildren about her, to watch them at their childish games, and to per onally superintend all those little details o nursery management which are none the less dear to her heart because fate has made her the rules of an amount. the ruler of an empire.

A new copying paper has been introduced. It is prepared in such a manner that there is no necessity to moisten the sheet before taking an impression of the manuscript. It is done by moistening the sheets in a solution of dehousescent salt, and once prepared in this manner the sheet is always ready for use. A solution of one-tenth part of chloride of magnesium, or one-twentieth part of calcined chloride of lime, is also recommended.

Hungary is the country where Hungary is the country where railway travelling is cheapest. It is said to be possible to journey from Buda Posth to Kronstadt, a distance of 500 miles, for \$1. 0, being at the rate of six miles for two centa Low as this fare is, it is liable to a reduction of one half in the case of labourers in manufactured to the case of labourers. Low as this large is, to describe the case of labourers lief to find some way to the fewer than ten cans.
