Huddled on Lowis Island and Suffered a Good Deal.

Montreal, Jan. 31.—Word was received by the Canadian Pacific Rallway passen-ger department yesterday conveying the information that the steamers Corona and Coquitian have been wrecked on the Northern Pacific coast. The former is a Ex-President Cleveland has bought 8 acres of land between Trenton and Princeton, N.J., which he lettends conlarge vessel belonging to the Pacific Coast Steamship Company, carrying 347 passongers, and is a total wrock. She sailed from Scattle, Wash., Jan. 20. The Coquitlam, a small boat with 40 gers, sailed from Vancouver on the same date. No particulars are given regarding the safety of the passengers. Both vessels were engaged in the carrying of passen-gers who are bound for the Klondike. the bubonic plague in India numbered 851. From all causes then were 1,540 deaths. The exodus is increasing and bus-

Crushed on the Roof. San Francisco, Cal., Jan. 31.—Further particulars have been recoived of the wreck of the Pacific Coast Steamship Company's steamer Corona, on a reef at the southeast point of Lewis Island, 480 miles north of Victoria, opposite the mouth of the Skeena River, on Sunday, Jan 23.

Jun 23.
The Corona sailed from Seattle with Skaguay on Thusrday, Jan. 20. She car-pled a cargo of seven hundred thus, to-gether with ten horses and 38 hogs. This was to have been her flual Alaskan trip, as she was to return to the San Francisco and San Diego run, and be replaced by and San Diego run and be replaced by the Queen.
Women and Children Taken Off.

At 5.05 o'clock Sunday morning, when 480 miles from Victoria, in what is known as Arthur Passage, the steamer suddenly crashed upon the reef. The first shock was followed by several lesser ones, as the vessel's headway ground her further upon the rocks. Most of the palsengers were up, awaiting the breakfast call, but a scene of indescribable confusion followed the rocking of the ship, when her engines are reserved in a force of the ship. in the Central Prison.

The trial of Tom Nuity for the murder of his sisters and brother in Rawdon, Quebec, has been going on at Joliette for three days. No new evidence of importwere reversed in an effort to get her off the rocks. When she flually settled down the officers and crew succeeded in alming the panic stricken passengers, and Captain Pierce at once ordered the boats lowered Pierce at once ordered the boats lowered and pumps to be worked.

As soon as it was ascertained that the

vessel-was taking water Captain Pierce ordered the women and children into the boats, and at 7.35 a.m. the first boat, in charge of Second Officer Marshall, put off for the nearest land, Lowis Island. Seven boats were manned and the passen-gers were all landed in two trips without accident. . Dogs and Horses Saved

The hand baggage and that in the forward hold was then transferred and the William J. Hallam, a Detroit lineman, was instantly killed on Thursday by touching a live wire while at work. dogs and horses saved Mattresses and blankets from the cabin state room were also landed for the accommodation of the shipwrecked passengers.
At 9 o'clock the Corona had settled so o at 19.10, far that the fires under the main bollers died in two were extinguished. Later Captain Pierce ordered Purser Ballantine to mail ashpre and at 11.45 the

THE FINISHED MAGIC LANTERN.

ward.
To the front of the box and resting on the deck a facing board is to be attached, and in it a holo should be cut just large sions, one taking the Dalton route, the enough to becave the case of condensor other the Chillidot trail. An Order-in lonses, which are the large lenses, between Council must be passed here permitting the light and the front or objective lenses. In Figure 5, which is a plan of the counders lanter, the condenser lenses may be seen at CC, and the objective lens s at 111. To the rear of the hox,

lens s at DD. To the rear of the box, Figure 2, a hinged door can be arranged in place and provided with a catch to keep it shut.

Through the bottom of the box a numher of holes should be bored, with a bit guillotihe. wood, half an inch square and six inches wood, half his inches square and six inches long, can be fastened to raise the laintern up so that hir may pass under it and up through the holes.

Around the hole cut in the top for the box a collar, two inches high is to be made of this sheet, iron, tacked fast to the inner edge of the hole, and over this the chiming will me and can be held in place.

place.
Having completed the woodwork so wide and six inches and a half high. In one of these cut a round hole large conough for the condenser lenses to slip through, and in mother cut a hole three inches squire. Mount these boards in an upright position three-quarters of an inch aturt on a block of wood half an inch

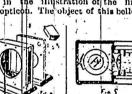

to the front of the condenser lenses, where its position can be soon in Figure 5, F.

The third board, G, is to be mounted on a similar block of wood with bevelled on a hair trigger ready to date forth the angle of the condenser lenses, where its position can be soon in Figure 5, F.

The third board, G, is to be mounted on a similar block of wood with bevelled on a hair trigger ready to date forth through the eyes and into the control of the condense of the be cut the same size as the diameter of the condemned. the objective lenses.

Between the braids F and G a bellows arrangement is to be made of gossamer cloth, heavy flamel or black velyet, and

its position can be seen in Fig. 6 E, and also in the illustration of the finished stereopticon. The object of this bollows is

FIGS. B. 4. BEVELLED FIG. 5. -INTERIOR ELIDE CARRIER.

to allow the lens board C to be moved forward or backward according to the distance of the lantern from screen or sheet, and at the same time to prevent any escape of light outside its direct line through the longes.

The chimney will be she next and last part to be made. Several materials can be employed of which to make it, but perhaps the best will be some heavy asbestos name. If it can be had; but if not, is

the collar attached to the box.

At the top a hood will prevent the light from showing above the channey and occasion. This are the places to occasion. This are the places to occasion. round bright spot in the cellid by timed with asbestos paper, tacked with line curtain tacks. This will out the heat of the lamp from split-

ceaser in comera and lantern supplies purchase a short focus pair of condenser lenses foot inches and a half in diameter and a quarter size four sinch focus double lons, without any diaphragm, and, if possible, with, a rack and plinton for the objective. At a lamp store obtain a glass moreury reflector about six inches in lameter and a ham; fount with a central raught or duplox barner.

Mount the contenser lenses in the superior of the contenser of the six of the superior of the cities and a half in diameter and in the contenser of the cities of th

diameter and a famp fount with a central draught or duplex burner.

Mount the contenser leases in the wool frame, so that the back-raige of the case resist on the wool front of the box. case rests on the wood front of the box, and the front edge on the board F; screw the objective lens flarge to the front of the board G and the redector to the inside of the door, as slown in Fig. 5.

If the burner is a contral draught it should so be placed that the middle of the contral to the contral t should so be placed that the middle of the wick is about four inches tack of the condenser lous, but if it is a duplex so arrange it that the wioks will stand at an angle, as shown in the plan, Fig. 5.

When mounting this stereoption bear in mind that the exact center of both lenges and the reflector must be in a straight line both from the side and the condense to be the result will be a half or top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view, class the result will be a half or the side and the top view.

partly shaded picture on the screen. Who lamp should be placed so that the black est part of the flame will be in the charge. ne through the center of lenses, and

flector.

When the lenses, lamp and reflector and properly adjusted the reflector and the throw the centre of the light to the first of the condenser, and then through the side or pecure, which is the dark limited front of the condenser in Fig. 5, and continuing the objective lenses and to the lenses and the property of the condenser in Fig. 5. sheet or screen, where the size is dependent upon the distance of the lantern

An objective lens with a four stell focus should make a picture several stell ix inches square when the lamp is ten six inches square when the lamp is ten several and eleveral set. foot away from the screen, and elever ock square when it is fifteen feet away and when twenty feet away the picture sould

be fifteen feet square.

For home use, however, a distance of ten to fifteen feet will make as lived picture as necessary, and the brilliance and detail of any good slide could be brought fout at that distance in a car and well defined manner.

This lantern, if properly and care the constructed, should prove very succept ut, and the boy who can make a good of good trans unders or of this can also tree. tive on glass plates or films, can also reduce good lantern slides by contact in

Wood and the Aide carriers can be outchased to take the standard size of thes, and that in turn can be slipped in the holder F, Fig. 4, where a spring are rigidal at top and bottom, will hold it in place

against the condenser. During the last few weeks the famis to the
