Who Has the Right of Way ?

It is a well-established principle of law that in crossing streets or highways the person on foot has the right of way. Drivers and bicycle riders should always bear this fact in mind. It is law, and if you injure a pedestrian by careless driving or riding you are responsible. A person is not required by law to run across the street to keep out of the way of vehicles and bicycles. The drivers and riders are the ones to look out for a clear track.

The Sidewalk Question

Editor Standard.—Your article on above question last week was interesting and timely. These questions, which affect the pocket of every ratepayer of the corporation, should be systematically figured out from an unbiased standpoint, and I am glad to see your views put in print, and that of others invited. Your deductions appear both reasonable and clear, and such careful figuring out of the question must, in my opinion, convince all intelligent ratepayers that the permanent sidewalks are the cheapest in the long run, and I hope to see the day when all our sidewalks will be granolithic ; Then pedestrians can proceed with a feeling of safety and those with baby carriages perambulate with pleasure to themselves and security to their precious freight. Citizen.

Don't Tear Down—Build Up

The old-fashioned theory of tearing down disease was entirely changed by the advent of Dr A W Chase's Nerve Food, which cures by creating new rich blood and nerve tissue. Through the medium of the circulation and the nervous system they strengthen and invigorate every organ in the human body.

Vitality of Snails.

The snail is blessed with great powers of vitality. A case is recorded of an Egyptian desert snail which came to life upon being immersed in warm water after having passed four years glued to a card in an English museum. Some species, in the collection of a certain naturalist, revived after they had apparently been dead for 15 years; and snails, having been frozen for weeks in solid blocks of ice, have recovered upon being thawed out. The eggs are as hard to destroy as the snail itself. They seem perfectly indifferent to freezing; and have been known to prove productive after having been shrivelled up in an oven to the semblance of grains of sand.
