Instrument Which Mysteriously Tells. Depth of Water Beneath a Vessel. To tell the exact depth of water beneath a vessel at any given time at d moment's notice is the object of an instrument recently perfected, known as the fathom meter. The fathom meter is circular in form, and in the center is a suspended

circle, which is set in gimbals, after the fashion of an ordinary sea compass. This circle has a frame of glass, and is graduated into half degrees and fathoms, which are pointed out by an indicator. In the center, and run ning clear across, is a small magnet, Connected with the instrument, is primary cell, from which a sufficient current can be obtained when it is desired to energize the magnet. The earth being also a magnet, its magne tism, or zore, is obtained, and when the instrument is properly adjusted and the circuit is closed an observation taken from it on board of a moving ship shows immediately the difference of the earth's magnetism at that
