his cousin is so near, for, selfish as the rest of mankind, he hopes to continue the delicious tete-a-tete in the Little parlour.

Hence he is glad when Larry walks over to greet an acquaintance, and Jack is about returning to his fair Dulcina, when he happens to follow the dude with his eyes, and immediately receives something of a shock, for he sees Larry earnestly talking with one whom he recognizes as the Pasha.

How long has the Turk been there? Perhaps he saw Doctor Jack come in: send up his card, and go in the parlour to wait, for the American did not look around; being too much engrossed with hise thoughts and anticipations of the coming meeting.

It is even possible that the Pasha knew of the appointment, although not present when it was entered into. Then he has also seen Avis come down and join Jack.

Not once does he look toward the letter, but converses fluently with Larry, who seems to have taken a strange liking to him. Jcck imagines that the crafty Pasha, believing he could make the New York dude useful, has cultivated his acquaintance, and as Larry's hair is so evenly talanced on either side, a very little flattery is apt to turn his head.

There may trouble come of this vet. Lut as the skies are still clear. Jack goes back to enjoy a little more of Miss Morton's company. When finally he leaves her, the Pasha is no longer to be seen in the hotel.

One experience with the footpads is quite enough for Senor Jack, and he looks around for a vehicle to take him to the carayansary at which he is located, and which is situated far away from the Puerto del Scl.

A driver sees his action and anticipates his wish, for he brings his closed vehicle close to the pavement, and calls out to know if the senor desires

a carriage. Perhaps Doctor Jack might have hesitated about engaging this fellow had he seen him holding a whispered conversation with the Turkish Pasha a short time before; but being in ignorance of this same thing, he jumps into the vehicle, gives the driver the name of his hotel, and slams the

Without a moment's hesitation he opens the window beside him, over the door, pushes his head and shoulders out, grasps the steel railing around the top of the coach, and begins to draw his whole form out.

None but an athlete could accomplish this, what with the darkness and the moving coach, but Doctor Jack does the job, feels with his foot for the front step, used by the driver, finds it, gives one turn, and with a single motion seats himself beside that worthy, who, never dreaming of the gymnastics going on behind, is tremendously astounded to discover a human body planted beside his own, but who is even more surprised when he feels the cold muzzle of a revolver touch his face, and a voice bellow in his car above the rattle of steel-shod wheels on the cobblestones.

> At this hour it would seem natural that the city should be growing more quiet, for every metropolis Jack has ever known subsides into a more peaceful state as the night wears into the small hours. To his surprise just the contrary seems to be the case. It is much more noisy than at ten o'clock, when he reached the hotel.

Jack becomes interested. He even leans out of the window to see what is up. New lights have sprung into existence—even streets that were neglected before now seem to throb with a pulsating life, and are in a measure have at least one lamp, or candle in his window.
