# HEADING TOWARD HOME

## There Will Only Be Tears of Joy and Not of Sorrow in the Welcome

A despatch from Chicago says: Rev. Frank De Witt Talmage preachciv., 26, "There go the ships."

which we can love also.

phorescences make it look like the destroy those loved ones who are river Nile struck with the Mosaic standing upon our upper decks. rod in the famous Egyptian plague. The seashore a monotonous place to pass the summer? It is uninteresting only to those whose love of nature is so undeveloped that they cannot understand the language of the 'sea.

## . THE HUMAN SHIP.

But, after all, one of the most absorbing diversions of the summer tourists living by the seashore is to watch the passing of the ships: For over a quarter of a century my privilego was to spend every summer by the Atlantic coast. My father's country home was near the end Long Island, at a small town called East Hampton. There, upon the sand dunes, I used to lie hour after hour watching the great steamers ship is shattered and senk into the depths of the sea? Let us see this morning what those points of resemblance are what kind of a ship each human being ought to be; what kind or upon the sea try to help those human being ought to be; what kind or upon the sea try to help those of the sea try to help those try to help the sea try heading. The ships! The ships!

A VALUABLE CARGO. Each human vessel always carries St. Louis and in an instant broke a very valuable cargo. Have you and destroyed whole streets and stopped to consider why a great buried many a corpse under the Cunard or White Star transatlantic debris, did it wreck any more lives senting arms David with his armor: steamer spends as much time by her dock as in traveling the high seas? given to cleaning up the ship, but most of it is spent in loading and walls of a building rest upon deep foundations. The huge masts and upper decks of a great steamer must have a deep hull. This hull must be filled with ballast, or else the ship would soon topple over. ballast is composed of boxes filled with merchandise or hundreds of bags of mail, or steel from Birmingham works and linens from the Irish mills, silks from France and wines from Italy, art treasures as well as

expensive furniture and clothes. Then food must be provided for the passengers and the crew and huge cargoes of coal to keep the engines in motion. One is amazed at a ship like the Kaiser Wilhelm II. carries at the beginning of its passage across the Atlantic. The great Insatiable. Their hunger is never stokers are shoveling the coal day in and day out. But what about the enormous mass of food which must be provided for the hungry human passengers and crew? Those who live above and below a great ship's deck are not to be numbered by the scores, but by the hundreds: On the last voyage I made from England there were nearly 2,000 human beings aboard. Then there may be millions of dollars' worth of bullion aboard. The clearing houses be so bad if in the voyage of life Coliath, at least nine feet high, with of the two continents are continually adjusting claims. Money from America going to Europe, Gold and silver from Europe coming to America. The average steamer plying the Atlantic is not to be despised. Its successful voyage means life to hundreds. Its destruction may mean death alike to passengers and crew and destruction to all the freight.

SAFEGUARDS OF THE VOYAGE. Does not each human craft carry a valuable cargo? What about the money which is intrusted to a man's care? If the cashier of a bank absconds and the bank has to close its door who suffers? Is it not the poor. widow and orphan, the old man who has trustfully placed in the bank the savings of a lifetime so that he can have something in his old age and money enough to buy him a casket and a grave when he is dead? What happens when a human craft found ers and sinks into the great sea o sin? Does it not nearly always do stroy many human lives which are
