

BOYS OF TO-DAY
WILL BE THE MEN OF THE FUTURE.
They Should be Rugged and Sturdy, Full of Life and Ready for Work, Play or Study—Keep Them Healthy.

Growing boys should always be healthy and rugged. Ready for play, ready for study, and ready at any time for a hearty meal. This condition denotes good health, but there are entirely too many who do not come up to this standard. They take no part in the manly games all healthy boys indulge in; they are stoop-shouldered, dull and listless; they complain of frequent headaches, and their appetite is variable. Sometimes parents say, "Oh, they'll out-grow it." But they won't—it's the blood that's out of condition, and instead of getting better they get worse. What boys of this class require to make them bright, active and strong, is a tonic, something that will build up the blood and make the nerves strong. There is no medicine that can do this as quickly and as effectively as Dr. Williams' Pink Pills. Mrs. Mary Compton, of Merritt, Ont., tells what these pills did for her sixteen year old son. She said: "About two years ago my son Samuel began to decline in health. He grew very pale and thin and at times experienced serious weakness. He complained with a tired, worn out feeling, and as the weeks went by he grew worse. This alarmed me, for my husband had died of what the doctors called pernicious anemia, and I feared my son was going the same way. I had often read that Dr. Williams' Pink Pills would cure anemia, and decided that he should try them. A couple of boxes made a decided improvement in his condition, and by the time he had taken a half dozen boxes his health was better than it had been for some years previous. His weight had increased, his listlessness had disappeared, and he was blessed with a good appetite. I may add that other members of my family have been benefited by the use of Dr. Williams' Pink Pills and I consider these pills the best of all medicines."

Poor and watery blood is the cause of nearly all diseases, and it is because Dr. Williams' Pink Pills act directly upon the blood, both enriching it and increasing the quantity, that they cure such troubles as anemia, rheumatism, indigestion, neuralgia, heart troubles, incipient consumption and the various ailments that afflict so many women. These pills may be had from any dealer in medicine or will be sent, post paid at 50c. a box or six boxes for \$2.50 by writing to the Dr. Williams' Medicine Co., Brockville, Ont. If you value your health never allow a dealer to persuade you to take something else.

A DECREASE.
"Smoothie," I say to my friend, speaking of a mutually detested acquaintance, "always was a frivolous person. Even at his present age he never seems to have any more on his mind than he had when he was a boy."

LARGE LOAVES.
The largest loaves of bread baked in the world are those of France and Italy. The "pipe" bread of Italy is baked in loaves 2 feet or 3 feet long, while in France the loaves are made in the shape of very long rolls, 4 feet or 5 feet in length, and in many cases, 6 feet.

MAKE BABY FEEL GOOD.
A baby's temper depends upon how he feels. If ailing he will be cross, worry the mother and annoy everybody in the house; if feeling well he will be bright, active and happy. It is easy to keep your baby feeling good by giving him the experience of mothers who give their little ones Baby's Own Tablets. One of these mothers, Mrs. C. W. Shaw, of Castleton, Ont., says: "Our child, eight months old, has always been troubled with indigestion. We had medicine from two doctors and tried other remedies without benefit. I then sent for a box of Baby's Own Tablets and found them just what was required. The child is now all right and is doing well."

Indigestion, colic, constipation, diarrhoea, simple fevers, in fact all the minor ailments of little ones are cured by Baby's Own Tablets. They always do good and cannot possibly do harm, and may be given to the youngest infant with perfect safety. Sold by druggists or direct by mail, at 25c a box, by addressing the Dr. Williams' Medicine Co., Brockville, Ont.

HUDSONS' BAY FISHERIES
ITS WATERS AROUND WITH MARKETABLE PRODUCTS.
Americans are depriving Canadians of a Valuable Asset.

An issue that may become an international entanglement is that regarding the right of American fishermen to ply their calling in Hudson's Bay, writes the St. John's Nfld., correspondent of the Philadelphia Ledger. Early last winter the Canadian Government entered into negotiations for the chartering of a Newfoundland seal ship, to be used as a revenue cruiser, and dispatched it this summer to Hudson's Bay, to compel the American whalers, frequenting these waters to pay duties on their outfits and otherwise to recognize Canadian authority. But when the Alaskan boundary treaty came before the United States Senate for ratification the Canadians canceled the negotiations for a ship, feeling that it would be better to provoke more friction with the United States this summer while the arbitration on this Pacific problem was pending. Canada claims that by the Treaty of Utrecht, in 1713, Great Britain ceded the sovereignty of Hudson's Bay and the adjacent territories. But she has never taken any practical steps to affirm this possession, and subsequent treaties have very materially lessened the effect of this original proviso. By the Treaty of 1818 the United States fishermen were conceded the same rights as British subjects along the West Newfoundland seaboard, the coast of Labrador, and then northward indefinitely. This would mean, on the surface, at least, that United States citizens would have access to the bay on the same footing as Canadians; but Canada chooses to maintain that this is a closed sea, as absolutely exclusive property as if it belonged to one of her narrow estuaries. A very nice question of diplomacy is here in evidence, for Hudson's Strait, the entrance to the bay, is over 50 miles wide, and territorial jurisdiction extends only three miles from the shore, unless expressly provided otherwise, so that if Canada cannot maintain her claim to the specific cession of Hudson's Bay there would seem to be no valid or effective reason for accusing the fishermen from the States of territorial aggression. The issue has never yet been formally raised between the British and United States Governments, but American whalers cannot visit the bay, while British and Canadian shipping is conspicuous by its absence.

VALUE OF THE FISHERIES.
The United States Fish Commission's reports show that during 11 years the whole fisheries of Hudson's Bay realized a total value of \$1,371,000 for fifty voyages, or \$27,430 per voyage. A single adult bowhead or Greenland whale is worth \$20,000, so it is easy to realize what are the possibilities comprehended in this venture, and what their exclusion from Hudson's Bay would mean to the United States whaler. For it must be remembered that not alone would they be deprived of access to its waters, but they would also be barred from the terra incognita beyond Baffin Land that forms its furthest boundary. These waterways have been the favorite haunts of the American whalers, which have made Miramichi Island, on the northwest portion of the bay, their regular winter haven, so as to be able to get at their prey as soon as the ice breaks up in the spring. Spencer's Harbor, on the north side of the strait, is also a favorite retreat for the New Bedford men with the same object in view, and last summer one whale ship came out with a cargo valued at \$70,000, after having been in the bay 27 months.

But the black whale is not the only denizen of these waters, which affords a profitable pursuit for the American voyager. The region abounds in other commercially valuable forms of marine life. White whales are also a profitable adjunct to the northern fisheries, and so abundant are they that a Canadian explorer who visits the bay asserts that he "has observed the water, as far as the eye could reach, from the deck of a vessel appear to be an undulating sheet of white, caused by the great schools of white whales." This creature, in its adult state, is about fourteen feet long, and is valuable for both its hide and oil. They are an alternative pursuit for the New Englanders, as when the black whales are scarce a ship can always fill up with their blubber and bones. These are also secured in great numbers by the Eskimos, and traded to the Hudson Bay Company which ships the products to England every year.

WALRUSES ARE NUMEROUS.
Walrus are also numerous about the coasts of the bay. They are hunted for their hide and ivory tusks. The hide weighs about 300 pounds, and is worth \$30, and the ivory will bring another \$10. Thus it will be seen that a whaler's landing may be very advantageously equipped with walrus products, or the similar ones of the narwhal, which is not, however, so abundant. Porpoises, though, occur in great plenty, and their liver and oil have a firm demand in the manufacturing world. The bay is the mating place of the hair seals, which are caught in thousands off Newfoundland every spring, and the Eskimos and Indians of the north waters procure large quantities of them during their presence in the bay.

Of edible fishes in these waters no less than thirty species are known to exist. They include the cod, the common salmon, Heame's salmon, sea trout, speckled and grey trout, herring, major whiting, herring, whitefish, capelin, whiting, jackfish, pickerel, pike, perch, sturgeon, and others. Bank's grayling, the most beautiful of fishes, is common in some of the streams on the

western side of the bay. The Newfoundlanders now go to Ungava Inlet, its eastern arm, after cod each summer, while the same fish are also taken regularly at Fort George, on James' Bay, the southern projection of the great basin. It is clear, therefore, that these northern waters teem with fish life of the first commercial value, and as the Atlantic areas now regularly fished are becoming depleted, fishermen are turning their attention more and more to Hudson's Bay as a reserve. It is only within the past four years that the Newfoundlanders have visited it, but they have been fully repaid for their enterprise. The American whalers have been frequenting it for years, and the only other ship which ruffles its placid surface is the Hudson Bay Co.'s schooner Pelican, formerly a British schooner, which goes there every summer with supplies for the company's trading posts, and brings back the stocks of peltries accumulated by herbar with the natives during the previous twelve months.

A FALSE WINDPIPE.
A handsome horse usually on "stand" along Broadway, New York, breathes through a false windpipe which has been inserted in his neck. He was one of the worst "hoarsers" local veterinarians had ever encountered before, he was operated upon two years ago. He was as noisy as a locomotive, and his speed was cut down fully one-half because of his difficulty. Then the tube was inserted, and the horse became as active as ever. The only part of the apparatus which shows is a small metal disc through which the air enters.

Geo. H. Kent's CASE RECALLED
DODD'S KIDNEY PILLS CURED HIM.

Recent Deaths of Prominent Men From the Most Dreaded of All Maladies Recalls the Fact that Dodd's Kidney Pills have Conquered It.

Ottawa, Ont., Sept. 14.—(Special).—The recent numerous deaths of prominent men from Bright's Disease recalls the case of Geo. H. Kent, of 408 Gilmour St., this city. Mr. Kent, who is still living here, strong and hearty, was dying of Bright's Disease. He had lost the use of his limbs and his whole body was swollen to a terrible size. Three doctors were positive that he must die. While watching at his bedside, his wife happened to read an advertisement that said Dodd's Kidney Pills would cure Bright's Disease. They were sent for as a last resort. From almost the first dose Mr. Kent says he felt benefited by them. After taking four boxes he was able to sit up. Seventeen boxes cured him completely. Mr. Kent's cure caused great excitement at the time. People who had heard of it came from far and near to see him, and all went away convinced that Dodd's Kidney Pills will cure Bright's Disease. This conviction is strengthened by a number of other cases reported throughout the country where this great Kidney remedy has been used, and Bright's Disease vanquished.

NAVAL POLICE.
A Few Facts About This Little Known Force.

Probably the most obscure police force in existence is that known as the Naval Police, members of which are to be found on every battleship in the British Navy. Although the sailors have their own policemen to look after them, it must not be inferred that this state of things is necessitated by the bad conduct of the men. As a matter of fact it is not often that the naval constabulary has to use his powers afloat, but when in port he is always busy in the interests of Jack. The naval constables on every ship are under the control of the master-at-arms, the highest position in this police force, to which a salary of \$10.50 a week is attached. Their duties consist in maintaining order throughout the vessel and guarding the ship's stores. When a ship is in port it is not an unknown occurrence for thieves to come aboard unobserved, and the constable on patrol has, of course, to prevent this. As soon as a ship enters port it is usual for seamen of good behaviour to obtain leave to go ashore, and very often Jack is so lost in the enjoyment of his little holiday that he fails to return to his vessel at the appointed time. The naval constables then row ashore, and being apprehended the deserter, take him back to his ship, when he receives a light sentence from the master-at-arms for his thoughtlessness. But withal the naval police are always popular with the men, who know well enough that they never make trouble unless there is just cause for it. On the other hand, they sometimes rescue Jack, after a long search, from the haunts of land-sharks, which he has been lured,

as often as not displaying the most remarkable courage on his behalf. Another reason for the popularity of these police is that they are really sailors themselves, and have served on the lower deck for three years as ordinary seamen before being promoted to compare of police. Furthermore, they must have a clean conduct sheet and be indefatigable workers, while to distinguish them they are allowed to wear the letters "N. P." on their sleeves.

HINTS FOR FIDGETS.
Women with a propensity to fidget should cultivate the habit of sitting perfectly still in a chair with their hands loosely clasped in their laps. A quiet, reposeful manner is more to be desired than riches. Fidgety women have nervous fingers, which apparently must always be doing something—playing with a chain worn around the neck, beating a tattoo on the lap, crumpling the bread at dinner, or otherwise occupied in irritating the nerves of other people. Such women should avoid a rocking-chair as they would the plague. It offers too many opportunities to indulge their restless habits. Nervousness of this sort is sometimes due to ill-health, but frequently it is affection. The well-purged woman has no fidgety tricks.

Catarh Cannot Be Cured
with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarh Cure is not a quick medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best topics known, and is used by all the best purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarh. Send for testimonials free.

CASHMERE SHAWLS.
The Industry Has Almost Gone Out of Existence.
Cashmere shawls are still made but their glory has departed, and the cheap and seductive aniline dye has displaced the soft and beautiful colorings in the old-time vegetable dyes. The men who understand their manipulation have gone to more lucrative fields, or else they lie in humble graveyards hard by the straggling village-streets of Cashmere.

The Cashmere shawl industry received its death-blow during the Franco-Prussian War, at the breaking up of the French Court. The shawls were brought to France for the great Napoleon, and fashion immediately set her seal upon them. But when the Court of Napoleon III. crumbled in the dust the vogue of the Cashmere shawl fell with it, and famine and distress invaded the far-away valleys of Cashmere. Shadi-pore, which was once one of the centres of the Cashmere shawl industry, is beautifully located in a valley at the junction of Sind and Jhelum rivers. But the village has shrunk to a mere hamlet, and the luxuriant vegetation fails to cover its bareness and poverty. What is left of the shawl industry is carried on by boys and men, who earn from two to eight annas a day, from two cents to four cents. For this beggarly sum they sit all day long at the looms, which are almost as forlorn as themselves in appearance, for they date back to the days of prosperity, and are held together by a generous use of string.

ENGLISH SPAIN LINIMENT
Removes all hard, soft or calloused bunions and blemishes from hooves, houghs, sprains, splints, ring bones, swellings, all sprains, sores and swollen throat, coughs, Sore \$20 by use of one bottle. Warranted the most wonderful Finnish Cure known.
Willie—"Say, pa, didn't you tell me the other day that it was wrong to strike anyone smaller than youself?"
Pa—"Yes, Willie, that's what I said." Willie—"Well, I think you'd write my teacher a note about that."
