### RELIABLE SEED CORN.

Care Should be Exercised by Merchants in Securing Supplies. As a fodder crop the corn plant is an important one. For ensilage purposes a proper combination of stalk, leaves and ears is desired. Varieties. that are suitable for ensilage are not, as a rule, the most profitable to grow for husking on the same farm in the immediate locality.

argest yields of fodder are obtained rom the later ripening varieties, and ensilage the best returns are oband from sorts that will just reach glazed stage of ripeness before the for early frost. Varieties that the the largest yield of good ensilage Mastern Ontario, Quebec and the daritime. Provinces are among the est varieties for husking in vestern Ontario, and the best varies for ensilage, in the latter dist are grown for husking in the reat corn belt. It is not to be remended, then, that farmers along northern corn belt grow their own In securing supplies of seed they become aced to depend entirely in their A great deal, therefore, and on the care exercised by seed refearts in securing their supplies
