At last the tense ring was complete, and the spearmen rose and closed in. The lion looked quickly from side to side, saw where the line was thinnest, and charged at his topmost speed. The crowded moment began. With shields held steady and quivering spears poised, the men in front braced homselves for the rush and the shock; and from either hand the wa. iors sprang forward to take their foe in flank. Bounding shead of his fellows, the leader reached throwing distance, the long spear flickered and plunged; as the lion felt the wound he half turned, and then flung himself on the man in front. The warrior threw his spear; it drove deep into the life, for entering at one shoulder it came out of the opposite flank, near the thigh, a yard of steel through the great body. Rearing, the lion struck the man, bearing down the shield, his back arched; and for a moment he slaked his fury with fang and talon. But on the instant saw another spear driven clear through his body from side to side; and as the lion turned again the bright spear blades darting toward him were flashes of white flame. The end had come. He seized another man, who stabbed him and wrenched loose. As he fell he gripped a spear head in his paws with such tremendous force that he bent it double. Then the warriors were round and

From the moment when he charged until his death I doubt whether ten seconds had elapsed, perhaps but what a ten seconds! The first half dozen spears had done the work. Three of the spear blades had gone clear through the body, the points projecting several inches; and these, and one or two others, including the one he had seized in his jaws, been twisted dut of shape in the terrible death struggle. We at once attended to the two

over him, stabbing and shouting, wild

with furious exultation.

wounded men. Then the warriors, raising shields above heir heads, and chanting the deep-toned (victory song, marched with a slow, dancing ster around the dead body of the and this savage dance of triumph ended a scene of as fierce interest and excitement as I ever hope to see.+ From "African Game Trails," by Theodore Roosevelt, in the August

The source of all intestinal troubles is the common house fly; his buzz is the first symptom of typhoid. Wilson's Fly Pads are the only things that kill them all.

### A Warning.

A boy who had been going to one of the public schools in Buffalo left school discharged the boy at the end of the week on Saturday night. "You're discharged," the manufacturer said. and get your pay, and let that be last of you. You're discharged." Monday morning the manufacturer was much surprised to see the boy at his former place at work. "Here!" he shouted. "What are you doing in this shop? I discharged you on Saturday night." "Yes," said the boy, "and don't you do it again. When I told my mother she licked me

Minard's Liniment Cures Garget Cows.

House Plants. If you want to find out for yourselves that plants need the right kind of air to breathe, and that they breathe with their leaves, take up a few slips of your garden plants this fall and tay to make them grow in the house, in a room where they will be exposed to the fumes of illuminating gas or of coal gas. Unchose.—London Globe. of illuminating gas or of coal gas. Under that kind crategory the circumstances.

Plants purify the air for us to use by breathing in certain gases from the air, and breathing out certain other gases. So that if you see a window full of healthy-loking plants in some house along the way you know that there is healthy pure air in that room for man to breathe.

Chose.—London Globe.

## PRIMARY DRESSING FOR BURNS

A strong solution of Epsom salts has been found useful as a primary dressing in burns and scalds. The solution is applied on a cloth, or in case of a hand or foot the part may be immersed in the solution and kept there so long as there is any pain on removing it. It is claimed that pain is quickly relieved.

Although Aberdeen is the home of Scotch granite, a shipment of 350 tons recently was exported to that city from South Carolina quarries to meet a demand for a variation in color from the native stone.

### COUNTING SAND.

How the Sands of the Seashore May Really Be Roughly Determined.

Did you ever try to count the sands of the seashore? Realy it is not such a formidable task if you go about it in the right way.

Choose a smooth, dry spot some surny day this summer, and, with ample paper and pencil and a botanists' magnifying glass, get down to work. Stretch your-self out at length and level off smoothly a space about an pins, black sand grains or other small objects exactly an eighth of an inch apart, then apply your glass with great precision and care. Count the number of grains that lie in a straight line between the two objects. This is the most difficult as well as the most important part of the proceedings, and too much pains cannot be taken. A difference of one grain will make a difference of millions in the later calculations. It would be more accurate to count the grains in a quarter or half inch. but there is danger of losing one's place and omitting or duplicating some.

Having obtained the count of grains in a line one-cighth of an inch long, the rest of the work is multiplication. Let us say in the present instance that 20 grains were found in the eighth of an inch. Of course sand varies greatly, but this number represents good, fine sand. Multiplying by 8 gives 160, the number of grains in a line a whole inch long; and squaring this (that | 3. 160 multiplied by 160), we have 15,000 in a single layer one inch square. In order to get an inch cube we must again multiply by 160, and this gives 2,493 069. Just think a very small quantity in the hollow of the hand contains nearly two and a half million grains. One's admiration for the wonders of nature grows tremendously, yet we have made but the beginning! A cubic foot contains 1,723 inches, so

this is the next multiplier and the product gives the astounding figures 4.313,-088,000. Four billion in less than a peck. Le us now imagine a stretch of sandy beach a mile long and a toot wide and deep. In this row of said not much larger than a sewer pine we find there are no less than 22,773,104.540,000 grains. But our beach has width, let us soy, a quarter-mile, and depth, say, fifty feet, and we find in this chance stretch a total of 1,503,024,903,240,000,000 particles. Over one and a half quintillion grains! The mind has ceased to comprehend such figures, and were we to add a dozen or two ciphers they would mean no more to us than this tremend-

ous sum. Any one with a calculating bent may expand these figures as he pleases. On might compute the sandy coasts of the United States, the North American continent, and so on, or might compute the number of grains in the Desert of Sahara. There is really no limit when once a basic number has been determined.

### Who Owns the Wind?

Windmills are said to have been introduced into England by the Knights of to go to work for a small manufacturer. The boy, was full, and his stupility annoyed the manufacturer greatly After two weeks of trial the manufacturer. A watermill was built in Bohemia in the year 718, for an old chronicler mentions it, going on to say that "before that time all the mills in Bohemia were

windmills set upon the summit of hills." Windmils became so common throughout Europe in the thirteenth century that the pope compeil d them to pay tithes to the church and landed proprietors and the clergy were forever quarreling as to the ownership of the wind! In Zealand a certain abbot built a mill to grind his corn in spite of the violent opposition of his landiord, who said that he was the owner of the wind an his property and no one had the right to use of it was

The Bishop of Utrecht was appointed arbitrator, and he when told of the matter flew into a rage declaring that what wind there was in his diocese belonged to himself and the church, and he proceeded to prove his contention by

WHAT MISSIONARIES DO. (Harper's Weekly.)

Two little girls saw | the | wide-open mouth of a crocodile in a picture book. "Crocodiles is awful," said one, seriously. "They eat up little heathen babies what don't say their prayers. In my Sunday school be give pennies to buy missionaries to go and shoot them."

HIS RISK.

(New York Weekly) City Editor-The street is all excitoment. An electric light wire has blocked traffic, and no one knows whether it is a live wire or not.

Editor-Detail two reporters to go to the wire immediately—one to feel of it and the other to write up the result.

## STOMACH MISERY

BARISHED BY "FRUIT-A-TIVES"

Stratford Centre, Wolfe Co., Que. "I have been completely cured of a frightful condition of my Stomach through the wonderful fruit medicine 'Fruit-a-tives'. I could not eat anything but what I suffered awful pain from Indigestion.

My head ached incessantly." I was told to try 'Fruit-a-tives' and sent for six boxes. Now I am entirely well, can eat any ordinary food and never have a Headache."

ALCIDE MEBERT. 50c. a box, 6 for \$2.50, or trial box, 25c. At all dealers or from Fruit-atives Limited, Ottawa.

#### Many Uses of Sand,

The sands of the sea are singularly iseful. They are of primary importance n glass making. They have an important place in warfare, as a bank of sand twenty inches thick is proof against modern rifle shots. The electrical properties of sand show that it has positive electricity, although a rod of silica, the chief constituent of sand, is negative. The singular drying effect which occurs when a stretch of wet sand is press-

ed by the foot is due entirely to an alteration in the piling of the sand grains. Normally the grains are close together, but abnormal piling is brought about by pressure of the foot, the space between the edges of the grains being enlarged and the water drained away. If the pressure of the foot is continued the and becomes wetter than ever, the partial vacuum quickly bringing water from the surrounding sand.

In quicksands the moving character is thought to be due to the imprisonment between the grains of gases from organic matter.-Chicago Tribune.

### Patronizing.

"Yes," said the somewhat severe lady my ancestors came over in the May flower,"

"From what I lave heard," replied Mrs. Cumrox, "accommodations on the Mayflower didn't compare with those of a modern liner; but, of course, the rates were lower."-Washington Star.

Recipes for Famous Dishes.

Hot pepper pot is a famous New Or-

leans dish of yeal. A knuckle of yeal is cocked until the meat is ready to drop from the bones then the meat is removed and cut fine, and added to tripe which has been cooked and cut into small pieces. Then the meat is put back into the broth in which it was cooked, together with a minecel onion, two sliced potatoes, a sweet pepper cut in shreds, a sprig of parsley, and a bouquet of herbs. When the pot boils up, it is further seasoned with salt, pepper and paprika.

## A PIANO FOR 50 CENTS

This is a golden opportunity for anyone to own an instrument. We have a large stock of used pianos, taken in exchange on . Heintzman & Co. pianos. These instruments are such well-known makes as Weber, Chickering, Haines Bros., Thomas and Dominion, and the price is from \$60 to \$125. Each one guaranteed for five years, and will be taken back in exchange with full am ount allowed any time in three years. Do not let this chance slip by you. A post card will bring full particulars.— Heintzman & Co., 71 King street east, Hamilton, Ont.

Rare Gases in the Air. Claude has employed his method of estimating the rare gases in the atmosphere, in an attempt to determine whe ther the passage of the earth through the tail of Halley's comet produced any. effect upon the quantities of these gases in the atmosphere. The method, which is extremely sensitive, was applied to a current of air 12,000 cubic feet per hour. Experiments were made on May 17, 19, 20 and 23 for at least three hours on each day. The results do not indicate any appreciable alteration produced by the comet in the quantity of these inert and difficult condensible atmospheric

Three packets of Wilson's Fly Pads cost twenty-five cents, and will kill more flies than twentyfive dollars' worth of sticky paper.

Following Ph'ls clphia's example, New York has established a free permanent ! exhabition of building materials.

WORTH KNOWING.

for any length of time.

Every mother must know how fatal the summer months are to small children. Cholera infantum, diarrioea, aysentery and stomach troubles are all common at this time and many a precious life is snuffed out after only a few hours illness. As a safeguard mothers should keep Baby's Own Tablets in the house. An occasional dose of the Tablets will prevent stom-nch and bowel troubles, or if the trouble comes on suddenly, will bring the little one through safely. Mrs. R. E. Sanford, Inverary, Ont., writes: "My baby was sickly for over a week with stomach and howel troubles and cried night and day, nothing helped her till I began giving her Baby's Own Tablets, but they helped her right away and now she is a big healthy away and now she is a big healthy child with fine resy cheeks. The Tablets are certainly a wonderful medicine and I recommend them to all my friends who have little children." Sold by medicine dealers or by mail at 25 cents a box from the Dr. Williams Medicine Co., Brockville, Ont.

Frogs Vie With Singers.
