Giant Sharks of the Present Day Are Very Rare and Scidom

lized that some species of sharks are among the hugest of marine animals, yet it is a fact that certain of them can be compared only with The eye has, to be sure, a most erican. These giant sharks, howthe whale, says the Scientific Amvery rare; turn up in most out-ofmeasured or studied. The largest species living at the present day are derful adaptable and hardy servant ing shark. The former is known from specimens stranded at The brain is generally our first inous times at the Cape of Hope, on the coast of India, Peru, Lower California. the Pacific archipelago and, most recently, Florida. It is thus very widely distributed. t attains a length of over 50 cet; specimen taken in the Seychelles n 1863 was measured and found to e over 45 feet, and others recorded om the same locality by a reliable server were over 50. Fortunate-, this monster is quite harmless. has very small teeth and feeds pon the minute organisms aboundng at the surface of the sea, which strains through its gill rakers. he same is true of the great bask ng shark, which is found especialin the Arctic ocean. This species pproaches the whale shark in size nd, like it, is an entirely harmless reature, feeding upon the microrganisms of the sea.

A TERRIFIC MONSTER

But if the largest sharks of to-day e harmless, the same is not true their dongeners in the past In Eocene times, the geologic age, during which mammals rose to their ace of supremacy in the animal world, there lived in the sea a giant' ark larger than any of the preent day and withal a most terrific nonster. This shark has received nsiderable attention during the ast year at the American Museum of Natural History through the fact that the museum procured several undred eeth of this species which were set up, in a restoration of its The teeth were collected The grass just out of reach looks beds of South Carolina by the late

These laws were of sufficient size up to allow five dr six men walk abreast right into the mouth. The teeth are arranged in rows above and below, those in the power of the wind. So in this edun ling, Toronto, Ont middle of each row being the larges. One of them which was espe-cially measured is 4% inches wide the London Globe. at the base of the crown and six inches high. There are 24 teeth in the lower, and back of each of these rows there are three more, not seen in a front view, which are intended to take the place of any teeth in the front row which may be lost. The FOR LITTLE ONES edges of each tooth are

LIKE SHARP KNIFEBLADES,

or to be more accurate, since they are serrated. What a tremendous engine of destruction this jaw must have been in life. Fancy the millions upon millions of fishes that must have been guillotined by the snapping to-gether of this gigantic mouth. Perhans never was there evolved an engine of destruction more terrible than this.) Not even the dental batnosaur rex, surpassed it in power. And what manner of shark was this to whom belonged these jaws? Have we any data by which to picture its ize and appearance? Fortunately, we have. There survives at the present day a closely related shark which gives us an idea of the appearance of its gigantic extinct lative. This surviving species is the great white maneater, known to bootjack, and the jack at bowls which is washed up on the Atlantic coast once in a long while. One of these sharks, a rather small speci-According to Prof. Petrie the re- men, ten feet long, was cast up on trouble caused by the use of cof- searches of the last twenty years the Massachusetts coast in 1883, and feet Tea dutains caffeine, the same have shown that signs were earlier received careful attention at the bad I had to give up coffee entires and that it was the published a description and accur-

It was thus as large as a sulphurbottom whale, the hugest of all whales. Carchardon megalodon is Carcharodon megalodon is not the only extinct species of this kind of shark. To judge from the teeth which occur in different parts of the world, there lived at least a dozen other species in the contemporaneously with it, which have also become extinct. The surviving species, the great white maneater, is exceedingly rare and may be regarded as on the

verge of extinction. What was the

cause of such a gigantic and terrible

monster becoming extinct?

Not knowing all the conditions of life of such a creature, it is not possible to give an accurate answer to this question, but we may venture an explanation. We know that a shark of such gigantic proportions must have consumed enormous quantities of fish. Owing to its repacious habits these fish must have decreased in number sufficiently in course of time to have deprived it thus must have led in its extinction.

food.

HUGE EIGHTY-FOOT SHARK Baby's Rash Became a Mass of Humor

Parents Decided He Could Not Be Cured. "Cuticura" Soon Made His Skin Perfectly Clear.

A Toronto man, Mr. Robert Mann, of 7584

Queen St. East, says: "Our boy was born in foronto on Oct. 13, 1908, and when three months old a slight rash appeared on his check. What appeared to be a water bilster would form. When it broke, matter would run out, starting new bilsters until his entire face, head and shoulders were a mass of scabs and you could not scela particle of clear skin. We did not know what to do for him and tried about every advertised remedy without avail, indeed some of them only added to his suffering and one in particular, the Remedy, almost put the infant into convulsions. The family doctol proscribed for him. This did not do any good so we took him to a hospital: two as week and he got worse, if anything. We then called in another doctor and inside of a week the boy was, to all appearances, cured and the doctor said his work was done. But the very next day it broke out as bad as eyer.

"We decided that it could not be cured and must run its course and so we just kept his arms bandaged to his side to prevent his tearing his fiesh. The Cuticura Remedies were recommended. We started using them in May, 1909, and soon the cure was complete. Cuticura made his skin perfectly clear and he is entirely free from the skin disease." (Signed) Hobert Mann, May 3, 1010.

In another letter, dated June 29, 1911, he adds: "My boy has never had any more trouble since using Cuticura."

For more than a generation Cuticura Soap and Ointment have afforded the most successful treatment for skin and sealp troubles of infants, children and adults. As single set is often sufficient. Although sold by druggists and dealers throughout the world, a liberal sample of each, with 32-p. book on Fine skin, will be sent free, on application to Potter Drug & Chem. Corp., 68 Columbus Ave., Boston, U. S. A. It is perhaps not generally rea-

WINDMILLS ARE OLD. They Were Used as Early as

Twelfth Century. The farm windmill, used in widest sense, means a machine by which the energy of the wind is ap plied to useful purposes. Windmil's were certainly in use as early as the twelfth century, but their exact origin is lost in the oblivion of the past. Their introduction into Europe is generally ascribed to the Saracens, through the Crusaders. Flashing their crimson-crossed homeward, through Eubanners rope, the knights of Richard Cheur de Lion brought many strange customs and innovations with them. The earliest written record of windmills in England dated the twelfth century deals with certain disputes in reference to tithes connected and other continents. But modern ders in every home." science has provided us with more
