WHAT THE CANAL COST.
Will Mean Expensive Time-Saving for Vessels.
Now that barges are going right through the Panama Canal from the Atlantic to the Pacific, and now that 1915, when the official inauguration is to take place, draws near, a few figures of wonderment will be of interest, says London Answers. The total length of the canal is only 50 miles, but it will mean a saving in distance for vessels going from New York to San Francisco of no fewer than 9,540 miles, or round Cape Horn the route is 14,840 miles. From other parts of the world the enormous time-saving too, will be effected.

Genius and Brains.
Investigations show that the brain of the famous M. Berillon, late head of the Identification Department in the Pictorial of Paris, was considerably above the average in weight. Such brilliant men as Bismarck, Currier, Kant and Turgenev also possessed brains far beyond the portion allotted to ordinary mortals. Turgenev possessed one of the heaviest brains on record. Apparently, therefore, that peculiar grey matter known as brain plays a very important part in the success of mankind. We are apt to look at it as 'dacking in brains'. A contradiction to this, however, is the fact that men whose genius has moved the world, and whose brains will be remembered for all time, have been the owners of brains far below the average in weight. The brains of Descartes, Shelly, and Schumann, for instance, weighed considerably below the normal standard.
