

RUSSIAN ARMY VICTIM OF FATE

AMAZED AT TURN OF FORTUNES IN RUSSIA.

A Red Cross Nurse Describes Battle of Orelia.

French

French have been in more than three years, and still continue to fight against enemies and the order out of chaos.

The following letter will help the front to understand what has been done by the French Army, Airplane.

For communication to geographical Society at St. Gobain, it had intermittently dropped shells into the French capital. But Paris was depopulated of soldiers except the wounded and the invalid after the beginning of the offensive on the western front. The shells had not fallen upon the defences of the city; they had wrecked small buildings in the outskirts and dug holes in the pavements, causing less damage than the usual aerial bombardments.

Persistence and practice that could profit from failure improved the marksmanship of the gunners. Good Friday one of their shells was dropped on a Paris church, demolishing the building, killing seventy-five persons and wounding ninety.

The shell struck the north side of the church, bringing down part of the roof and opening a breach twelve feet high and twenty feet wide. Nearly all the debris fell inward upon the heads of the worshippers sixty feet below.

Reconnaissance made all of the staff of the batteries whose fire assisted in the battle.

The Aviation of Combat, younger first, and the most faithful, has for her protection the wings of hostile airships. When he looks down him, it is clearly visible.

The Aviation of Bombardment, also employed in reprisals of the enemy, but with greater and perhaps more effective results.

What of the Future?

Although essentially instinctive, these two branches of aviation can only be developed by the constant study of their efforts. Let us consider the opportunities and influences that will aid and develop the two branches of aviation.

When the strength of the French and German masses of their artillery and of their cavalry. However, the part of wisdom to put the forces of the fighting forces in order to facilitate the success of the war.

The extensive strength of both the French and German squadrons was very small in comparison with the millions of combatants supported by each other's strength.

BANGER'S ASK PUBLIC TO HELP THEM KEEP FIRE OUT OF THE WOODS.

The danger season for forest fires is past at last. Rapidly drying soil has left the old grass, brash, leaves, and twigs condition for starting big fires.

An effort is being made by the boys in this province to keep the forests safe this year to a minimum. They will succeed only if they carefully extinguish every smoky blaze before it reaches the settlers in the districts where their homes are in the utmost danger. Settlers must continue to be alert for forest conditions of campers and settlers.

"The button," says the Canadian Association, "wants to regard himself as a deity now until November."

A Canadian who has many hopes for the future.

PARIS SHELLED BY HUN GUNS.

Church, Dating From Middle Ages, Struck on Good Friday.

There was from the first a mystery regarding the purpose, the military necessity, of the big gun which the Germans have been firing on Paris, the gun which has added "a new page to the fame and history of Krupp," and which was "an achievement of German science and labor," for which the Kaiser has expressed his imperial thanks.

From its position in the forest of St. Gobain, it had intermittently dropped shells into the French capital. But Paris was depopulated of soldiers except the wounded and the invalid after the beginning of the offensive on the western front. The shells had not fallen upon the defences of the city; they had wrecked small buildings in the outskirts and dug holes in the pavements, causing less damage than the usual aerial bombardments.

Persistence and practice that could profit from failure improved the marksmanship of the gunners. Good Friday one of their shells was dropped on a Paris church, demolishing the building, killing seventy-five persons and wounding ninety.

The shell struck the north side of the church, bringing down part of the roof and opening a breach twelve feet high and twenty feet wide. Nearly all the debris fell inward upon the heads of the worshippers sixty feet below.

"The edifice is now a heartrending sight. The enormous mass of stone, crumbled into all shapes and sizes, lies in the middle of the nave and piled to about the same height as the high altar, which was not damaged. The side aisles are littered with less cumbersome wreckage and the pavement is covered with gray dust. All the stained glass windows, some of which were of historical interest, are shattered. The church, although begun in the middle of the Renaissance, the beauty of its musical services, which were sung unaccompanied, attracted many music lovers."

Another victory that will have a place in the catalogue of Kultur's achievements with the aerial raids on London, the burning of the university and library of Louvain, the bombardment of the Venetian churches and art treasures, the wrecking of St. Sante of Padua, the destruction of the Rhine Cathedral and the sinking of the Lusitania!

FAMOUS MEN WHO LOVED CATS.

And Declared That Their Company Was Conducive to Work.

Had you any idea that some of our greatest men liked to have cats about them, and even declared that they could work better in their company.

Very often George Washington is said to have met visitors with a kitten perched upon his shoulder, and Daniel Webster adopted every stray cat he met.

Old Dr. Johnson rescued half-drown kittens and took them home to his study, where they were stabled with good things till they looked like little barrels.

Sir Walter Scott had a wailike cat called Hince, who lorded it over both dogs and cats. One day she made the author's great staghead weep aloud because she would not let him go up the stairs to his master's study. With her back up the dared him to come on.

Dean Swift is the man who had two holes cut in his study door, so that the cats might go in and out as they pleased. He said that the large hole was for the big cats and the small hole for the kittens.

The story is told of Mohammed that being constantly followed by cats, which were attached to him, he one day cut away the sleeve of a hand-some robe so that he might not disturb a sleeping cat that had taken refuge there.

BOMB OWN LEGATION.

Germans Ask France to Pay for Damage to Paris Buildings.

During the recent German aerial attack on Paris one of the enemy aviators dropped a bomb which struck and damaged the embassy building of one of the Central Powers. Two days later the caretaker of the building requested the legation of the neutral Power representing the enemy country to present a bill to the French Government for damages done to the building.

France is asked to pay \$900 for destruction by the enemy of his own property.

Silver-Plating Fable.

The street fakir finds ready sale for bottles of so-called "liquid silverplate." To show how beautifully it works he takes a spoon or fork, much worn or perhaps of base metal, and dips it into the solution. Then taking it out, he wipes it with a rag, and lo! it is bright and silvery.

Such solutions are sometimes advertised for "restoring silverware" in the home. Housewives buy them and the first results are pleasing.

Unfortunately, however, the brightness quickly disappears and the "plating" wears off. The stuff is not silver at all, but mercury salts.

Prune and tie up the roses and syringes with tobacco to prevent insect attacks later.

Minard's Liniment Believes

PAIN IN T' BITT' LIFT YOUR CORNS OR CALLUSES OFF

No numbness, then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezezone, and can now be obtained in tiny bottles as shown at very little cost from any drug store. Just ask for freezezone.

Diet For The Second Year.

In den diet

New first

May be watched.

During the second

year the number of meals should be reduced, if possible, from five to four per day, the last to be given at six o'clock and the baby then put to bed.

A healthy child will usually make this change for himself.

In the case of delicate infants it is sometimes better to give a small amount of food at more frequent intervals, but the average child does better with fewer and larger meals, giving the stomach time to rest.

During the second year the following foods may be safely introduced:

Broths, beef, mutton, and chicken; the milk from oyster, soft stale bread,

vegetable soups, soft stale bread,

tostis, or indians.

If your druggist hasn't any freezezone yet, tell him to get a little bottle from us.

It is a small amount of food at

more frequent intervals, but the average child does better with fewer and larger meals, giving the stomach time to rest.

Never give tea or coffee to any

child at any age.

They do not need stimulants,

and the effect on the nervous

system is very bad.

The proper drink is milk, or water.

A quart of milk a day in addition to solid foods is not too much.

Give plenty of well-cooked cereals,

rice, oatmeal and wheat cereals.

Those cereals should be cooked in the double boiler at least one hour; the oat meal two hours.

MINER'S LINIMENT Cures Burns.

Baking powder biscuit can be made with half flour and half corn meal.

A Dyspepsia Cure.

M.D. advises: "Persons who

suffer from severe indigestion

and constipation can cure them-

selves by taking fifteen to

thirty drops of Extract of Roots

after each meal and at bedtime.

This remedy is known as Mother

Selby's Curative Syrup in the drug

trade." Get the genuine, 50c.

and \$1.00 Bottles.
