Beirnes—Ceaser—That report No. 10 of Finance Committee as read be adopted. —Carried

Council then adjourned till Monday December 10th.

JAMES P. HARE, Clerk.

TRUSTWORTHY

It is a good thing to have a publication in the house that you can trust. You never have to think whether you can safely leave The Youth's Companion on the table. When you begin a Companion story you know you are not on a slumming expedition. You are being led up into the sunshine of the everlasting hills. The folks in The Companion stories are everyday folks. They are like your own townspeople: stumbling, falling, picking themselves up, trying with some defeats and some difficulties to attain to their high ideals.

1920 will be a year of great stories for Youth's Companion readers. There are more than 250 of them in the year. One of the eight great serials will be Capt. Theodore G. Roberts' glorious story of Canadian patriotism and valor, Sons of Liberty.

New subscribers for 1920 will receive:

1. The Youth's Companion — 52 issues in 1920.
2. All remaining weekly 1919 issues.
3. The Companion Home Calendar for 1920.

All the above only $2.50 everywhere in Canada and the United States.

THE YOUTH'S COMPANION
887 Commonwealth Ave., Boston, M.
New subscriptions taken at this office.

GIVE "SYRUP OF FIGS" TO CONSTIPATED CHILD

Delicious "Fruit Laxative" can't harm tender little Stomach, Liver and Bowels.

Look at the tongue, mother! If coated, your little one's stomach, liver and bowels need cleansing at once. When peevish, cross, listless, doesn't sleep; eat or act naturally, or is feverish, stomach sour, breath bad; has sore throat, diarrhoea, full of cold, give a teaspoonful of "California Syrup of Figs," and in a few hours all the foul, constipated waste, undigested food in a sour bile gently moves out of its little bowels without griping, and you have a well, playful child again. Ask your druggist for a bottle of "California Syrup of Figs," which contains full directions for babies, children of all ages and for grown-ups.

Applied After Shaving

Keeps the Skin Soft and Smooth

MANY men suffer from irritation of the skin as a result of shaving. With some it assumes a form of eczema and becomes most annoying and unsightly.

By applying a little of **Dr. Chase's Ointment** after shaving the irritation is overcome and such ailments as Barber's Itch and Eczema are cured.

60 cents a box, all dealers, or Edmanson, Bates & Co., Ltd., Toronto.

Dr. Chase's Ointment

EXPORT TRADE IN DAIRY PRODUCTS IS ASSURED

It is the consensus of opinion of Canadian officials who have visited Europe that the future of the export trade in dairy products is assured. In England butter is everywhere at a premium and Canadian cheese continues to hold its good reputation. Mr. H. S. Arkell, Live Stock Commissioner, who has recently returned from overseas, states that the shortage of milk and dairy products in Great Britain is unprecedented. The same is true of other European countries. The scarcity and high price of concentrated feed is to some extent responsible for this. The condition is so general as not quickly to be remedied. It is further responsible for retarding the increase of swine production and the restoring of the moral requirements of fat. This statement from the Live Stock Commissioner should give confidence not only to dairy farmers but to those who are able to raise hogs.

A MAN'S PRAYER

Teach me that sixty minutes make an hour, sixteen ounces one pound, and one hundred cents one dollar.

Help me to live so that I can lie down at night with a clear conscience without a gun under my pillow, and unhaunted by the faces of those to whom I have brought pain.

Grant, I beseech Thee, that I may earn my meal ticket on the square, and in doing so may not stick the gaff where it does not belong.

Deafen me to the jingle of tainted money and the rustle of unholy skirts.

Blind me to the faults of the other fellow, but reveal to me my own.

Guide me so that each night when I look across the dinner table at my wife, who has been a blessing to me, I will have nothing to conceal.

Keep me young enough to laugh with my children and to lose myself in their play.

And then when comes the smell of flowers and the tread of soft steps and the crunching of the hearse's wheels in the gravel out in front of my place, make the ceremony short and the epitaph simple: HERE LIES A MAN.—Michigan Trademan.

FOOD FOR LAYING BIRDS

Most Economical Ration, in View of Conditions, Discussed.

Contagious Abortion Makes Necessary the Sale of Valuable Animals at a Sacrifice — The Disease, However, Will Yield to the Treatment as Explained.

(Contributed by Ontario Department of Agriculture, Toronto.)

A PULLET requires more feed than a hen, if it is intended that the pullet produce eggs.

A bird to lay well must have a surplus of feed over and above body maintenance. The excess of feed above body maintenance goes either towards growth, fat, or egg production.

Poultry feeds are divided into two classes: one, whole or cracked grains, commonly called scratch feed, and the other, ground grains, commonly called mash.

Scratch feeds are generally fed night and morning and are scattered in straw in order to induce the birds to scratch or take exercise. A mixture of two or more kinds of grain usually gives better results than one single grain, largely because individual birds' appetites vary from day to day. A good mixture for the winter months might contain as much as fifty per cent. good corn, either whole or cracked; if corn could not be had and the birds were accustomed to eating buckwheat, the buckwheat would answer nearly as well, or one could use twenty-five per cent. buckwheat and twenty-five per cent. corn. To the corn or buckwheat could be added twenty-five per cent. of barley, ten per cent. of wheat screenings, and fifteen per cent. of good oats. If one was obliged to do so, almost any of the grains could be fed alone with the exception of oats. There is too much hull or husk on oats to use entirely as a single feed.

At present for a mash feed we are using the standard hog feed. If the ground grains are to be fed moist or mixed with cooked household refuse then the mixture should be one that will mix to a crumbly state, but if fed dry in an open hopper the above is not so important.

The mash feed is the one where the animal meals are generally given. The amounts vary from ten to twenty per cent. of the mixture. The animal meals used are commonly high grade tankage and beef scrap. Where one has plenty of skim milk or buttermilk the other animal feeds are unnecessary. Some use green cut bone; cooked refuse meat, such as livers, lights, beef heads, etc.

A very good mash can be made of one part each by measure of shorts, barley meal, and ground oats. Corn meal could be used in the place of the barley or with it. If one is short of green feed or roots, it would be well to add one part of bran. Perhaps the simplest mash to feed from an open hopper is rolled or crushed oats. We have used this, when the birds had milk to drink, for a number of years with excellent results.

Laying hens require plenty of green feed. Cabbage is one of the best green feeds. Roots are very good, but clover leaves should be within reach as well as the roots. Sprouted oats are used to a large extent on poultry farms. When the birds get accustomed to a green and succulent food it is generally wise to give them all they will eat. A pen of fifteen pullets will eat a fair-sized head of cabbage almost every day or one hundred hens will eat a peck of sprouted oats day after day.

Grit and shell should always be within easy access.—Prof. W. R. Graham, O. A. College, Guelph.

Abortion Should Not Be Neglected.

Some cases of abortion are the result of injury to the dam due to a nasty fall or bad kick. In such cases the trouble is not likely to spread to other members of the herd. With the majority of abortion cases, however, the trouble is due to an infectious disease which is very readily spread to other members of the herd.

The disease apparently is localized almost entirely to the uterus. Here an inflammation is produced which may result in the expulsion of the foetus, dead or alive, at any period of gestation. In most cases of infectious abortion, however, the foetus is expelled dead. A frequent complication of such a case is the retention of the foetal membranes by the dam. If these are not removed after a few hours, death from blood poisoning is almost sure to occur.

The bacilli which cause the disease are present in large numbers in the fluids, foetal membranes and foetus. Consequently, every care is necessary to prevent these from contaminating anything with which other stock is likely to come in contact, either directly or indirectly. All should be gathered up carefully and burned or else buried deeply in quick lime. Then the hands and clothes of those in attendance should be thoroughly wash with a disinfectant, and a strong disinfectant used freely all around the stall, particularly on the floor.

The dam should be kept in a stall by herself, as there will be a fluid discharge from the vulva which may last for weeks. Disinfectants should be freely used in the stalls, and the external genitals, thighs, tail and back of udder should be washed daily with a satisfactory disinfectant solution. For this purpose a two-per cent. solution of lysol is strongly recommended. Strict attention should be paid by the attendant to the thorough disinfection of his hands or other parts of his person or clothes after handling the patient.

The dam should not be bred again until some weeks after all discharge from the vulva has stopped.—Prof. D. H. Jones, Ontario Agricultural College, Guelph.

SOME ARMY TERMS

Light For the Layman Not Posted on Military Matters.

HOW ARMY UNITS ARE NAMED.

The Various Designations From a Corps to a Squad—In Speaking of a Company, Troop or Battery the Letter Should Always Be Named First.

To the ordinary civilian who is not particularly well posted on military matters, an interpretation of the army terms in general use may prove of interest. The following are among those that are most constantly employed:

A corps is two or more divisions and is commanded by a major general.

A division is composed of two or more brigades and is also commanded by a major general.

A brigade, commanded by a brigadier general, is composed of two or more regiments and independent companies or battalions.

A regiment of infantry consists of twelve line companies and three additional companies. It is commanded by a colonel, with the following additional officers: One lieutenant colonel, three majors, fifteen captains as company commanders, three of them also being members of the colonel's staff as adjutant, quartermaster and commissary; two lieutenants to each company, one lieutenant acting on each of the three majors' staffs.

A battalion is made up of four companies and is commanded by a major.

A company of infantry consists of about 150 men, divided into two platoons; platoons are divided into squads. A platoon is commanded by a lieutenant—a commissioned officer; two or more squads are commanded by a sergeant; a squad is commanded by a corporal and comprises seven men besides the corporal.

A company of cavalry is called a troop, and a battalion of cavalry is called a squadron.

A company of artillery is called a battery. It is divided into sections, and there may be different numbers of guns, according to the kind of artillery.

Three batteries of artillery make a battalion.

The word "company," "troop" or "battery" should not be used before the letter, as "Company B." It would be the same as to say "Street Jackson." The letter comes first, just as the numeral comes before the word regiment —"Second regiment," not "Regiment Second."

Troops are either "federals" (regular) or national guard. Every male citizen of the United States between the ages of eighteen and forty-five is a member of the militia. Never use the word when referring to organized bodies of troops.

There are no such things as "militia officials" or "army officials" in military parlance. They are national guard and army officers.

A skirmish, engagement, brush, fight or encounter is not a battle.

A battle is an engagement for the possession of a certain point and is general in its character. Large bodies of troops are engaged—more than a brigade; otherwise the fight is an engagement, a skirmish or an encounter.

Never say "Captain Jones and his soldiers of Company A." Say "A company commanded by Captain Jones did so and so."

Any irregular body of troops less than a company, or troops is called a detachment unless it is a platoon or squad or a section of artillery. Never say "Lieutenant Jones and a number of men" from such and such an organization. Say "A detachment from A company, commanded by Lieutenant Jones."

Ammunition is spoken of in terms of rounds. "Fifty rounds" means fifty cartridges—fifty shots.

Never say muskets. There are not any. Artillery carry pistols and not revolvers.

Troops generally move in columns. The usual column is four men abreast, two ranks comprising a squad, with the corporal as the man on the left in the rear rank. They go into the firing line in "extended order," sometimes referred to as a skirmish line. Troops are sent into battle or engagement as the firing line, the support and the reserve. The tactical unit in line of battle or engagement is the battalion.

A picket consists of several men, generally a squad. One of a picket is a sentinel or sentry. In front and on the flanks of all troops in camp are outposts—pickets. All troops doing guard duty, picket duty, outpost duty, etc., are commanded by "the officers of the day," so designated for a period of twenty-four hours, as are the troops on guard duty.

Washing the Dishes.

A convenient device in the form of a good sized depression in the center or end of a kitchen sink helps away with the necessity of drawing and emptying water for a separate pan. By the addition of a double set of sieves the dishes may be washed and drained without being touched by the hands.

Hungry Ants.

To have his mail eaten up by white ants is sometimes the lot of the resident of Siam, owing to negligent or criminal postal officials. A few months ago a whole bag of mail was lost in an outlying district, and the letters were afterward found in the jungle partly eaten.

Fame has only the span of a day they say. But to live in the hearts of the people—that is worth something—Ouida.

BE A BOOSTER.

SUNLIGHT IN THE NIGHT HOURS

EFFICIENT factory lighting is of greater importance now than ever before. The high price of material and the pay of factory workers are factors that spoilage and waste-effort must be reduced to a minimum.

Every factory manager knows that daylight is the best light for work by. But there are working hours in the day when artificial light is necessary, even in the most modern plant. An artificial light approximating daylight simplifies the problem of maintaining a high standard of production.
