A Man is just as young and Strong as his Blood

No man can fight the battles of life and hold his own if his blood is not pure, for rich, red blood is what strength is based upon. When you see a strong, vigorous man, who never knows when he is licked, you may wonder that such a man has coursing through his veins rich, red blood. Many people are weak, tire easily, become discouraged quickly, and sometimes feel like giving up the struggle. Such folks need Dr. Pierce's Golden Medical Discovery, which is sold by druggists in liquid or tablet form.

Send 10 cents to Doctor Pierce's Invalids' Hotel in Buffalo, N. Y., for a trial package of the tablets. NIAGARA FALLS, ONT.—I have used Dr. Pierce's Golden Medical Discovery at times for the past three years with wonderful results, and I take great pleasure in saying a word to boost the cause of "Freedom from Illness." I, as a presman by occupation, which is quite fatiguing and injurious to the system, but since taking the "Discovery" business has no drawback for me. Three cheers for Doctor Pierce's medicine!—WILLIAM H. DENNEY, Jr., 32 Bridge Street.

BARBERING

MAKE COTTAGE CHEESE

Farmers and Townsfolk May Easily Have Their Own.

A Nutritive and Inexpensive Food—May be Made From Skimmed Milk—Methods of Preparation Described.

(Contributed by Ontario Department of Agriculture, Toronto.)

There are a great many kinds of cheese made in the world, but the easiest to make is cottage cheese. A person living on a farm where there is a supply of milk can make not only for their own table but for market as well, while the town-dweller who buys milk by the quart can use up small amounts left over in exactly the same way. There is no need of wasting milk in the home just because it has become sour. It is true that small amounts of sour milk are often used when baking, but a person may not wish to use all of it in that way. It is not necessary to use whole milk for making cottage cheese. Skimmed milk is quite satisfactory, and a small amount of cream may be added to the curd at the time of adding the salt. There are two methods used in making cottage cheese, the "rennet method" and the "ordinary" or "heating method." We will speak of the heating method, as it is the one most commonly used in Ontario. To make good flavored cheese, it is necessary to have good clean flavored milk free from taints or odors. Have the fresh skimmed milk at a temperature of 86 to 75 deg. F. It can be allowed to sour naturally, or a small amount of good-flavored sour skimmed milk or buttermilk may be added to hasten the souring and help control the flavor. Allow the milk to stand undisturbed until it has nicely thickened when it will be ready for the next step of the process. Stir the coagulated milk to break it up evenly, then carefully heat it to separate the curd from the whey. If only a small amount is being heated it may be placed in a double boiler. A larger quantity may be heated in a can or pail, while a cheesevat is suitable for large quantities. If the water in the vessel surrounding the milk is kept between 140 and 150 deg. F. there will not be the danger of overheating or heating too quickly, which is often the case when the water is boiling. There is usually a good separation of curd and whey when it is heated to a temperature between 90 and 100 deg. F. If the whey should not be clear when the temperature reaches 100 deg. do not heat higher, but allow the can to stand. The whey will likely become clear in a few minutes. Avoid overheating the curd as it causes the cheese to be dry and crumbly. Next, drain the curd. It may be hung up in cotton bags or it may be drained on cheesecloth placed over a rack or strainer. When the whey has drained away lift the cloth at one side and allow the curd to roll to the centre, then do the same with the other side. This will hasten the drainage. When sufficiently drained the curd should be salted, using about an ounce of salt to four or five pounds of cheese. If the cheese were made from skimmed milk it will be necessary to add a little cream. About an ounce of cream for each pound of cheese will be sufficient. After thoroughly mixing allow it to stand a little while for the salt to dissolve before putting it up in packages. If a person were making a quantity it might be put up in pound packages by printing it with the butter-printer and wrapping in parchment paper. This is an inexpensive way of handling cottage cheese, but it is not as attractive as the little fibre containers coated with paraffine. A person who is using butter on the farm might increase the returns from the dairy by making some cottage cheese each week, as there are many people who like cottage cheese but do not know where to get it. Cottage cheese is a food that is nutritious yet inexpensive and much more of it might be used. Like all other foods, we find people who like it and those who do not, but in many cases the addition of some favoring has made it acceptable. Cottage cheese may be used in many ways. It may be eaten with cream and sugar, preserves or maple syrup, or an attractive dish may be made by making a nest of cottage cheese and placing a bit of jelly in the centre. Or it may be flavored by the addition of chopped fruits, olives or pinenuts and moulded into any desired shape. If a person has not a mould, a small box may be lined with waxed paper and the cheese packed in with a knife or spoon. When filled, fold over the ends of the papers and shake the cheese out of the box. Cottage cheese salads are popular. A very simple salad is made by placing on a lettuce leaf a small mould, or a heaping tablespoonful of cottage cheese then adding salad dressing; or a more fancy salad may be made by making the cheese into small balls and rolling them in chopped nuts. Cottage cheese may also be used as a sandwich filling by mixing it with chopped nuts, celery or dates or any other favoring that may be desired. Many recipes could be given for utilizing this dairy by-product, cottage cheese, but sufficient has been said to suggest its possibilities.—Miss Belle Millar, O. A. College, Guelph.

SCHOOL REPORTS

Markdale Public School Report of IV Class, Sr., for April.

J. Curry, H. English, H. Bowes, E. Roberts, M. Dundas, A. Stanley, M. Noble, A. Jackson, E. Perkins, M. Thibaudau, A. Sullivan, M. Teeter, V. Hockley, E. Lee, C. Foster, J. Sullivan, D. Hare, G.
