Rev. Mr. Moulton, of New London, conducted the service in St. Philip's Church on Sunday last, in the absence of the rector, Rev. W. J. Hendry. Seven years ago Rev. Moulton was stationed here for six months and his many friends were pleased to see him.

The W. A. held their monthly meeting last Wednesday at the home of Mrs. A. W. Caswell in Holland Centre. Considering the distance and other attractions, quite a nice number were present and some arrangements were made for holding a fowl supper during October.

After six weeks' labor, the bridge at Bonnell's mill was completed last Tuesday and the men have departed for other scenes. Many and varied are the comments passed by the town fathers and spectators from surrounding country as to the appearance of this first Government bridge to be built in our vicinity. Compared with some of the County built bridges the general opinion is that the County ones are ahead.

During last week the interior of the Methodist Church was all re-papered, ceiling in cream, and walls in an grass paper, the window sashes and frames painted and puttied and a new window put in the end to replace the one broken some time ago by the wind. Next Sunday being Rally Sunday, special services in the Sunday School and the evening Rev. Burgess will speak on Sunday School work and the children will take part in the singing and in other ways assist in the service. Services will hereafter commence at seven o'clock in the evening, instead of 7:30 as usual.

It is the Potatoes

The average Canadian potato per acre in the Province of Ontario, for the past thirty years has been about one hundred and fifteen bushels. The yield varies greatly. In 1917 there were potatoes in Ontario from two bushels or less to over a hundred bushels per acre. People are realizing more and more that for high yields of potatoes conditions must be favorable. It is important to have good fertile soil well cultivated and to plant a liberal supply of seed of the best varieties at the proper time. Seed potatoes are somewhat immature which have been produced in a cool climate, and which are comparatively free from disease are apt to furnish seed of high quality. Even under these conditions it is well to carefully inspect the seed before planting and to thoroughly rotate the growing crop. A potato field is ruined by removing the undesirable plants. A thorough roguing of the growing crop once or twice during the summer is one of the most effective ways in ridding the field of a number of the potato diseases. This operation would also insure the immediate removal of the weak and unhealthy plants which are sure to produce undesirable seed. Potato growers sometimes go through their fields and remove all plants which are not true to type. When roguing is done with a double object of eradicating disease and of purifying the variety decided advantages are sure to follow. Thorough roguing is one of the best methods of securing pure, healthy seed of high quality. Dr. C. A. Zavitz, of a College, Guelph.
