The in Write for a copy of Bulletin No. 267; it is free.-R. R. Graham, O. A. College, Guelph.

Aunt Ada's Axioms: Someone has said that a farm is a business with a home attached; but the best farms are homes with a business attached. Elm, maple, or even nut trees and fruit trees are good to plant along highways. The objection to fruit and nut trees is that they may be broken down by over-zealous collectors of fruit. This is not apt to happen if common on the highway.

Means Comfort and Convenience Managing the Wee Workers at the Crucial Time.

Water Indoors Pumped From Out- First See That They Are Well F 3-Examine Higgs Carefully for Foul Brood-Clip the Queen's V. ings-Making and Controlling Inchlise.

(Contributed by Catarlo Depart-

Unless the beckeeper gevs olony an abundance of feet it farm water supply against contamin- tall not less than tifty pounds per early April should be to said plicolwhether well, spring, or cistern the hive. Many colonies starve in the be described. In the first place I because there is not sufficient food in desire to emphasize the fact that, it the hive to allow the queen to lay to for the farmers wives to carry the quired to produce one frame of broad water from the pump over the well and to be in condition to give a good to the house, where the pump could be located inside the house, and all the labor of controller water from the pump could be not less than ten frames of brood by the labor of carrying water avoided June 15th. The syrup for spring and without very little more labor expended in pumping.

well, and how far away? If the water Bees can enter the colony at one time. supply is no more than 150 or 200 This tends to prevent weak colonies feet from the house, and the level from being robbed and also keeps the

level at the house, the pump may be which do not cover two frames thick-put inside the house, and the water ly, should be united with strong coldrawn in quite satisfactorily. It onies. The simplest method of unit-would not cost very much to make ing colonies in early spring is to this change in the pump, arrange- place the very weak or queenless colment, and consider what a great sav-ing of labor and time, inconvenience, colonies, with one sheet of new spaper and exposure to bad weather would between the two brood chambers, be effected by merely moving the This should be completed in the pump inside. Perhaps you have never evening. The bees will quickly gnaw thought of this matter. How about through the newspaper and unite through the newspaper and un securely guarded from surface con- present in the apiary, coloni's must tamination then when the pump is not be united unless to other polonica having American foul-brood.

When the colonies have been unit ed and have sufficient food, they need no further manipulation until the period when dandelions and fruit trees bloom. This is a very in portant time and a little attention given to the bees will result in increased profit-Give all strong colonies extra rooth;

We clip queens' wings to control the swarm, also that the age of the queen may be known. A part of the two wings on one side are removed with the aid of a small pair of sets-Before passing on, a few features sors. The reasons for clipping the concerning installation of the water wings of the queens during this perpipe to the well or supply should be lod are as follows: (1) Queens are These are: The best easily found; (2) There is little livequality of galvanized pipe should be lihood of clipping virgin queen; (3)

should be deep enough to be always is completed before the warming safe from frost, the pipe should slope season commences. Mr. and Mrs. Wes. Bradey, Glass- slightly towards the well, and there The brood-chamber of every colony J. S. BLACK. Clerk.
