

The AUTOMOBILE

TEST OF TIRE PROVES VALUE OF GOOD CARE.

An automobile tire is not unlike an individual's health. The person who thus avoids this difficulty entirely, observes the laws of health. The person who does not, in the long run, will find himself in a similar predicament. The tire that is not properly cared for will wear out much more rapidly than the tire that is properly cared for. The tire that is properly cared for will last much longer than the tire that is not properly cared for.

Ordinarily the motorist who takes reasonable precautions in operating his car has little or no tire trouble. This is due to the fact that the tire is properly cared for. The tire that is properly cared for will last much longer than the tire that is not properly cared for.

Yet one can never tell when a tire will give out. It is a matter of chance. The tire that is properly cared for will last much longer than the tire that is not properly cared for.

PROPER INFLATION NEEDED. Consideration should be given to the proper inflation of the tire. The tire that is properly inflated will last much longer than the tire that is not properly inflated.

Remove grease, oil and acid from the tire by using a cloth dampened in gasoline. Prevent damage from rust by the use of a rust inhibitor.

Canada's Supremacy at Chicago Show

The Dominion Exhibition at Chicago has been a great success for Canada. The Dominion Exhibition at Chicago has been a great success for Canada. The Dominion Exhibition at Chicago has been a great success for Canada.

An Emergency Repair.

A repairman received a call from a motorist who had become stranded on the road. The repairman went to the motorist's aid and made a successful repair.

Use of Iodine

According to authorities on first aid, tincture of iodine is the best cauterizing agent to use on fresh wounds.

A Handle for Garbage Cans.

From an old spade or fork handle cut a five-inch piece, drill a hole through the center and a small hole near each end and to one side of the center hole.

First Naval Battle.

The island of Corfu, known originally as Coreira, was the site of the first naval battle fought in the annals of Greece.

Might Well Be Eithen.

Wife—"A Congressman is being sued for breach of promise."
Hubby—"By a woman or his constituents?"

The small man also has his place.

Business and life are also bank accounts. You can't take out more than you put in.

Cables are not always laid under water, as is demonstrated by the unique cable which runs from Manchester, England, under the channel to France, overland through Germany, Poland, Russia and Persia, to the port of Karachi, on the Indian Ocean. It is one of the longest overland cables in the world, and has just been put once more into use, after the damages it sustained during the hostilities in Europe.

Why Trees Don't Fall Down

By Ruth Harrison

Buddy coming out of school, his hockey stick in his hand, pointed at the lumps of snow along the path as they went to school for something.

"No, you have done it," said the professor. "That's a puzzle. We don't know all about it but we have found out some things. There are several forces of it. You know there are forces of air kind and another kind and about us. By forces I mean such things as heat, cold, wind, light and moisture."

"What makes them so tough," asked Buddy. "It's all the same kind of wood," said the professor. "It's all the same kind of wood."

"Yes, but look at them," said the professor. "Those others are dirtier and grayer. Look as though they were older."

"They are," said the professor. "The brown ones are last summer's plants and the gray ones grew the summer before."

"Light helps too. Did you ever look at your mother's geranium plants in the window? Are the leaves and flowers turned in toward the window? Toward the light?"

"Yes," said the professor. "Light is necessary for the life of the plant. If you put a plant in a dark room, it will die."

"It isn't white oak," said Buddy. "It's a maple tree. It's a maple tree."

"Black it is," said the professor. "I'll show you how to be sure. He cut out a little piece of bark on the point of his knife. The outer bark

POOR ADVERTISING

There's not much use in advertising unless you advertise the truth. A string of falsehoods may draw the voters to your booth, and you may sell them shoddy clothing as woolen goods of great grade; but they will view your joint with loathing.

And wives will tell at quitting parties how sick their husbands are. The Green Front store. And school-boys, Jims and Charies at the Green Front store. And school-boys, Jims and Charies at the Green Front store.

TREE PLANTING ON THE PRAIRIES

Important Part Played by Shelter Belts in Developing the Resources of the Middle West.

Why the prairies are treeless is a moot question, but the labor and experiments of over twenty years have shown that trees can be made to grow in the prairie region of Canada.

The few ample precautions are taken. The value of trees upon prairie farms is threefold. They add to the productivity of the farm, they provide wood for many uses, and they are a source of life.

The usefulness of tree-belts was recognized by the early settlers, but it was not until the early part of the present century that the importance of tree-belts in the prairie region was fully appreciated.

The Department of the Interior, through the Division of the Forestry, has established a distribution system for the purpose of distributing seedlings to the prairie farmer.

The work is carried on cooperatively. The Government supplies the seedlings, the farmer supplies the labor and the land, and the Government pays for the seedlings.

Music in Factories. The question of the effect of music upon the output of workers came into one of the discussions of the British Association at Liverpool recently.

The Superman. Private Banks had been the most helpful and retiring little man in the army. When he visited the camp he had always found for shelter and stayed out of sight until after they had gone.

Cleaning Jerusalem. Plenty of rain water has in the past year done away with one of the most important problems of life in Jerusalem.

Puzzled Jack. It was bedtime for four-year-old Jack, but the little fellow wanted to stay up later. His aunt, who tipped her head at nearly two hundred pounds, said: "Why, Jack, think of me—I am over so much older than you and I go to bed with the chickens!"

An Ancient Though Not Honorable Profession. The diner, says Punch, having finished his meal and called for the bill, studied it with care and apparent disapproval. "Do you make any reduction in the same line of business?" he asked the waiter.

A Community Investment. The state is doing more for the medium individual than ever before, and should do more still. His legitimate aspirations to live decently and to enjoy above his handicaps should be met and satisfied. It is a community investment, which pays dividends in good citizenship.

Fresh Egg. Mrs. Egg—"Is he a cold storage egg?"
Miss Egg—"No, he's entirely too fresh!"

Clay rods, about three inches in length, were formerly used for cutting wigs, instead of the more modern curl-papers.

Tenant of a property-owner in La Rochelle, France, receive a "bonus" of three months' rent on the birth of the first child and six months' rent on the birth of the second.
