Why Ford Predominates

VALUE

From 1904 until 1923 the Ford Motor Company of Canada, Limited, manufactured 450,000 Ford cars and trucks of which 91% are still in use. More convincing proof of their built worth could hardly be given.

Selected materials, simple design, and accurate workmanship are factors in this long life. They explain the high utility and operating economy of the Ford when new. And they also give it the ruggedness to withstand the wear and tear of daily driving year after year.

This long life means slow depreciation, sustained value, satisfactory performance from your Ford while you continue to drive it, and a measurable resale value when you wish to dispose of it.

It means that the Ford gives you unusual value per dollar invested, not only this year but for a long term of years to follow—means that when you select the Ford you obtain approved security for the dollars you invest.
