CHEVROLET gives Quality Transportation at the Lowest Cost per Mile

HE automobile as a productive factor in Canadian business has proved of greater value than any other single invention. By shortening distances and time, the automobile brings buyer and seller together more quickly, conveniently and economically than any other means of transportation.

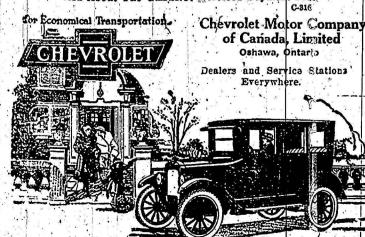

The automobile has increased man's earning power many times over. And Chevrolet, the lowest-priced quality car in the world provides this efficient transportation at a lower price per mile thap does any other car built.

Continuous daily service under difficult conditions only proves the complete dependability and stamina of this practical car. . .

In appearance Chevrolet does credit to any business house or professional or private person. In appointments and equipment it is as complete as the most discriminating owner could wish.

Chevrolet is an investment that will pay good dividends. Investigate.

bad qualities which of the building when the bell rings."

Leg Weakness in Chicks.

By S. W. Knipe. Leg weakness is an ailment prevalnt with closely confined chicks. Probably it is more correctly termed a 'symptom" rather than a disease since t apparently may occur under differ ent methods of feeding and management and in different forms, such as heumatism, neuritis, and rickets.

Symptoms.-As, the name implies, the legs become weak. It starts with an unsteadiness and the chicks soon ose use of the legs. The appetite usually continues to be good at first. The largest and most vigorous chicks are often the worst afflicted. It occurs in chicks from one to six months of age. Rheumatism and gout usualy show enlarged joints.

Causes.-Little is definitely known as to the cause of leg weakness in chicks. Lack of green food, mineral matter, fresh air, exercise and sun shine, deficiency in the vitamine content in the ration, overfeeding of highly nutritious feeds, too much heat, damp quarters, and overcrowding are causes most often assigned for less causes most often assigned for log

Prevention and Cure.-It is a generally recognized fact that chicks which have access to the ground outside after they are a week old, rarely ever pecome affected with leg weakness. Whether this provides exercise, sanshine, fresh air, green feed or minerals from the soil is an unanswered stantly Nevertheless, the results shortly are certain. When the weather is cool

nd the chicks must be kept indoor the following will be beneficial: Keep sand or fine litter on the floor. Provide fresh pieces of sod each

Feed grain in clean dry litter to inluce exercise. Keep the brooder house well venti-

Supply green feed such as sprouted ats, lettuce, green alfalfa or clover. Mix 5 pounds of granulated bone in 100 pounds of mash or feed the bone

Sometimes wood or hard coal ashes placed in a corner of the brooder house pparently have a value in preventing ind curing leg weakness. The chicks will oat it readily and it can do no

The surest means of both prevention nd cure is to get the chicks outside as much as possible after they are a ow days old, ,

Opposition may become sweet to a

Tallible (?) methods are advocated. When all nature takes on new life that the blood most seriously needs attention. Some people dose themselves with nursatives, but these only further weaken themselves. A purgative merely gallops through the system, eather than help. It is infinitely better, not to allow the mind to wander at all.

There are, however, times when slumber cludes us., On such occasions an opplication of cold water to the top of the head will produce sleep when other means may fail.

"Never do that again, Mona! It you

EASY TRICKS How To Make A Coin

- Vanish

FIG 1: This Season Dr. Williams' Pink Pills are an all-This stunt is used by many prowish to cause a coin to vanish. It

requires a little skill but the ama-teur will be able to do it well aft-er half an hour's practice. A half dollar is held between the finger tips and thumb of the left hand.
The thumb of the right hand is
placed under the coin and the
fingers closed over it, and the coin
apparently carried away in the right hand. When the right hand is opened, the coin has vanished. If you will try the trick, you will observe that when the fingers close over the coin, the coin can be dropped into the palm of the left hand. The right hand goes through the motion of taking the tebin, every effort being made to duplicate the appearance of actually taking the coin. The left hand, in which the coin is "palmed" drops naturally to the fide, the trickster begins processed. side, the trickster having prac-ticed holding it just as it it con-

tained nothing.
The amateur will find some difficulty in palming the coin. In this particular trick it is better to hold the coin between the roots of the fingers and the first joint. The hand will be slightly curved and a natural position of the hand will be obtained very easily. Much of the success of the trick depends upon the manner in which it is acted. Until the moment when the coin is supposed to vanish, the trickster should act just as if the coin were feally in

the right hand. (Olip this out and paste it. with other of the series, in a scrapbook.)

Beware of Imitations!

Unless you see the Bayer Cross" on "Well, Janet, how about you?" her perforated or wholly destroyed natural uffice asked. "Aren't you first in anything?"
