

The Fine Qualities of "SALADA" GREEN TEA cannot be adequately described but they can be appreciated in the teacup. FREE SAMPLE OF GREEN TEA UPON REQUEST. "SALADA," TORONTO

About the House

COLOR COMBINATIONS.

If you want to avoid making up a disappointing, remember: Brilliant colors are more difficult to combine than dull ones. The safest rule is to use a little of a brilliant hue with a dull or dark shade. "Cerise" must not be scattered all over but judiciously used in small accents. The same is true of orange, light yellow, and just-into-emerald green. They are good accessory colors with dark blue. The bright yellow and orange shades can be used with good results with grey. Authorities on color tell us that black may be combined with any color because black absorbs all of the different color rays. Any color will tone in with black for black already has some of that color in it. In applying this rule to other styles, must be remembered: Each season brings its own particular shade of color combinations. This winter black is combined with white and white with black. White and black are combined with blue, purple, and red. These colors have been used in combinations. Sometimes black can be used to tone down a harsh combination of colors. This is often illustrated in embroidery. The use of black yarn in intermingling with light red, purple, and yellow threads in the shade of a pattern. We are also told that white will combine with any color because it reflects all light rays. The absence of all color isn't true but white will combine with any color. If the material is wool, white is best. If it is silk, white is not so good. In combining white with other colors, the material should be such that it will harmonize with any color. If the material is wool, white is best. If it is silk, white is not so good. In combining white with other colors, the material should be such that it will harmonize with any color.

be deposited with perfect security on a bed; or on the porch floor, and mother is free to go about her work with no fear of mishaps.

M. GOOD MEASURE GOSPEL.

I always like to get good measure when I buy, and I love to give good measure when I sell. In selling fruit and vegetables, the peck, half-bushel, or bushel measure, as the case may be, when weighing butter for sale, I put in a little extra. I have heard of people who use a good reputation, and we never have a surplus on our hands. Buyers will always get such matters with neighbors, consequently we get customers that go elsewhere to buy if they didn't hear from others about the fact that gives such generous measures. —Mrs. D.S.L.R.

OLIVE-OIL PICKLES.

Olive oil pickles improve with age and are delicious in salads as well as for ordinary table use. Use four cups of olives about one inch in diameter, pared and sliced. Measure out half this amount of sliced onion. Let these vegetables stand 24 hours in a strong salt and water brine. Drain and arrange in layers within a jar, covering each layer with one table-spoon of mustard-seed. Cover with equal parts of vinegar and olive oil.

A COMFORTABLE PLAY SUIT FOR THE SMALL BOY.

Seersucker, linen or cotton cloth would be suitable for this style. The free edges may be bound with braid or bias seam tape. The Pattern is cut in 4 Sizes: 2, 3, 4 and 5 years. A 2-year size requires 2 1/2 yards of 27-inch material. Pattern mailed to any address on receipt of 50c in silver, by the Wilson Publishing Co., 73 West Adelaide St., Toronto. Send 15c in silver for our up-to-date Fall and Winter 1924-1925 Book of Fashions.

Railway Built by Doctors!

The most wonderful, and at the same time the most isolated, railway in the world is in South America. It begins and ends two thousand miles from civilization. The remains of steam navigation upon the Amazon and its mighty tributary, the Madeira River, is at Porto Velho, two thousand miles from the sea. Here the Madeira-Marmore Railway begins, carrying the traveller and his merchandise past two hundred and fifty miles of cataracts and rapids to the navigable rivers of Bolivia. The task of getting European goods from north-eastern Bolivia used to be a gigantic one. It took six months, and every pound had to be carried on the backs of natives to escape the rapids. The railway was begun as long ago as 1874, but it had to be abandoned, because every sleeper laid cost a fortune. It was only when medical science stepped in to help the engineers that the colossal task was accomplished ten years ago. The line was built by the Government of Brazil. It circumvents nine cataracts, starts two thousand miles from any other railroad, and ends at a similar distance in Bolivia. The great waterways complete the journey from Atlantic to Pacific. The Americans say that it was really built by "Dr. Lovelace and Quinine."

They Never Miscarry.

It's astonishing how many different kinds of mull reach the dead-letter office. (Sady) "Yes—all except the bills."

A Question in Dynamics.

Teacher—"Johnny, what is velocity?" Johnny—"Velocity is what a fellow lets go of a bee with."

Love Gives Itself THE STORY OF A BLOOD FEUD BY ANNIE S. SWAN.

CHAPTER II.—(Cont'd.) "And what brought you to Ayr?" asked Alan. "I shrugged her shoulders. "What wind blows the straw? My father had had a wonderful holiday here once in his old tutoring days, with two English students whose home was in this county. It was always the dream of his life to return permanently. So, when his Cambridge days were done, he simply girded up his loins and came. My mother and I had no choice."

"And you do not feel at home here?" she shook her head. "Do we look as if we should? My mother was an actress. That, in itself is enough. Not that I mind much, and my father's mind not at all. In fact, he is completely unobtrusive, anything amiss, or other than what it should be. Ayrshire has no disappointed him. I feel as if I should like to see the man, purely in the long run since you have consented to make it your future and permanent home. "Her eyes flashed, and she lifted her eyes to his in a look of odd but quite definite appeal. "And you mean to keep him here?" "Why, yes, I suppose so. You see, I'm not interested to be a rich man, but to be a happy man. We could do it with his help, couldn't we? He's an excellent servant. There isn't anything under heaven he doesn't know something about."

"I'm afraid I've been away from Ayr for the greater part of the day, and only returned this morning. Your sister must not be left longer. I am glad to have had this opportunity." "And you will come again?" "As to that, I am not sure, but I am sure I shall come back with you. I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk."

"I shall be glad to see you," he answered. "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk." "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk." "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk."

"I shall be glad to see you," he answered. "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk." "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk." "I'm not sure I can go without you, but I shall be glad to see you. It's a beautiful night, and a joyous walk."

Music From a Mirror.

More than two thousand years ago a barber discovered that, in shaving his mirror, also was forced through tubes which were common in mirrors at that time. This caused a curious musical sound to be emitted. So struck was he by this peculiarity that he set about making an instrument which was the foundation of the modern organ.

After several experiments he made a water-fute, in which air was forced by hollows through an inverted cone which led to flutes controlled by a keyboard, the pressure being kept up by a bellows. After a thousand years a rival instrument made its appearance. This was of a similar pattern, but, instead of water, weights regulated the pressure.

In 1931 an organ was erected at Winchester, England. It had twenty-eight bellows and ten pipes for each key. The two men who sat at the keyboard blew and sweated enormously. Later, a firm of organ-makers in Gornham succeeded in erecting the first really big instrument. The primary stops did not differ very much from those of the day, although various new ones were introduced.

Among the innovations were the nightingale and cuckoo stops, while others represented cock-crowing and goat-bleating. Though these novel stops have now fallen into disuse, an organ without these might as well be a stone. It was not until the nineteenth century that the problem of the regulation of air pressures was solved by the introduction of the hydraulic blower.

Abraham's Birthplace. A temple has been found at Ur, in Mesopotamia, by British and American explorers, which is claimed to be the oldest building in the world. It was built by King Assur-nasir-pal in the reign of about 4,500 years before the birth of Christ, and the foundation of it was about 6,500 years old.
