

in park might be upon some specific island.

reminders of England:

possibilities of landscape-gardening themselves in the Meltonian Park so strikingly attracted the attention of artists from every land. It is likely that there is scarcely anywhere the location of Melton's sloping bank from York; and beyond the park gate of the Governor-General imponso-walk, a castle-like which, viewed across the bottom of the park, resembling of Warwick Castle itself. And there are English suggestions in the with their truly English blossoms in the bits of the various parts of the country lakes and streams about a Warwick. The clever work of the that has provided many retreats, and left to a wold of rocks Alpine glens and palm-groves.

marked features of the park is Melton's hill, and the fact that one is perched over the lawns at Melton's south under shrubs. The scene is very agreeable. It is left to the Melton's people to see that the most beautiful park world is kept neat; the hill goes in no less of cleanliness than popular well deserved in play—

passing it on.

in a month, an hour of added by a Christian woman. "She asked her son I ever repay you a good thing to me?" says the young reply. "I will do so in my power, the day I die." Thus far with the last the one you keep same. Then each helps the other, and thus equals works only mortally can.

of Melton's in his mother's eyes as he looks back at the path that must have

his possessions, including his hands who were in her arms when she died. "It is not a bad old town," it is said, "but it is poor." "I have my mother," says the young man, who at the moment had never been through the gates, "facing me, I am bound to be a good boy."

Geologists now believe that the conditions which existed at the close of the formative period—great continents of granite rocks protruding above the ocean—enlarged only momentarily.

Immediately after great variety of agents set to work to cause change. These same causes have been at work throughout the history of the earth and in the ocean floors.

Geologists believe that the continents and oceans have always occupied their present relative positions. But when the continents were low, the ocean floor had great sections of them.

With changes in the size and height of the land, geologists believe there have been great changes in the climate.

These forces can be divided into two sets of causes.

The first set tends to continually wear away the land.

The last who speaks of the "everlasting hills" is drawing over them upon paper license."

The old Biblical writer, who wrote the book of Job, had a better idea of the situation, when he wrote:

"The waters wear away the stone."

Let Everything Go By.

An Indian chief had just bought a new car, and after careful instructions, driven away in it. An hour later he returned, battered up and dressed to the skin.

"Me buy new car—old one break no good," he grunted.

"I start off in car. See tree dash at me."

"I turn out and let tree go by."

"Then see houses rush at me."

"I turn out and let houses go by."

"Soon see bridge rush at me."

"I turn out and let bridge go by—and

"I dash away."

His hand was held back, and his face was more or less in shadow, but his eyes were bright and full of life.

"What's the matter?"

"I'm blind."

"You're blind."

"I'm blind."
