

Superb in Flavour "SAFADA" TEA

Every cup is a new delight. Ask for it.

SCARAMOUCHE
by Rafael Sabatini

BEGIN HERE TO-DAY.

To escape hanging on the charge of sedition, Andre-Louis Moreau fled from his native town of Gavrilac and hides his identity as a member of a band of strolling players in which he makes a great success in the character of Scaramouche.

GO ON WITH THE STORY.

Coming later into that upstairs room that was common to all the troupe, Andre-Louis found M. Binet talking loudly and vehemently. As he entered Binet broke off short, and whirled to face him.

"I await your explanations of the disgraceful scene you provoked to-night."

"Disgraceful?—Is it disgraceful that the public should applaud me?"

"After the play to-night, M. de La Tour d'Azyr came to me, and told me in the severest terms that your scandalous outburst was a disgrace to the troupe."

"I am sorry to say that I have not a good photograph of myself at present. I was born in Granby, Quebec, and received my public school education, and also my first year of high school in Saskatchewan. The past two years have been spent here in Ontario. I am now in my fourth year of high school."

"We attend the United Church and I belong to the Wolfe (C.G.I.) group. As for sports, I am very fond of basketball but do not go in much for any other outdoor games."

"I have not fully made up my mind what I will do when I finish school."

"CANADA"
We Canadians may well be proud of our country. Less than four hundred years ago Jacques Cartier raised the flag on the banks of the St. Lawrence River. The English the St. Lawrence valley and the Maritimes were the only settled parts of Canada. To-day she occupies the entire continent. It has been said that she covers so much surface that all the clippers of the world could not sail her shores. The narrow strip along the southern edge has been brought under cultivation each year this strip grows wider and wider.

In Ontario and Quebec where the fertile soil endows the rich mineral lands, the fur countries have been the barren surface of the continent. It has been said that she covers so much surface that all the clippers of the world could not sail her shores. The narrow strip along the southern edge has been brought under cultivation each year this strip grows wider and wider.

"And now you've got your answer," chuckled Binet, "I hope you like it."

Callouses

Quick, safe, sure relief from painful callouses on the feet.

Dr. Scholl's Zino-pads

lane, all unconsciously to deliver himself into the hands of Andre-Louis. In the interval after the second act, Andre-Louis sought the dressing-room shared by Polichinelle and Rhodomont. Polichinelle was in the act of changing.

"I shouldn't trouble to change," he said. "The piece isn't likely to go beyond my opening scene of the next act with Leandre."

"Nothing," said Leandre. "There was a gasp from the audience, audible in the wings, and then swiftly followed Scaramouche's next question."

"True," said Leandre. "But what should it be?"

"You may believe," said Scaramouche, "and again the exclamations rolled into thunder."

"I received your letter stating that I had won one of the \$5.00 prizes in the Essay Contest and was very pleased to hear it."

"I am sorry to say that I have not a good photograph of myself at present. I was born in Granby, Quebec, and received my public school education, and also my first year of high school in Saskatchewan. The past two years have been spent here in Ontario. I am now in my fourth year of high school."

"We attend the United Church and I belong to the Wolfe (C.G.I.) group. As for sports, I am very fond of basketball but do not go in much for any other outdoor games."

"I have not fully made up my mind what I will do when I finish school."

It has been said that she covers so much surface that all the clippers of the world could not sail her shores. The narrow strip along the southern edge has been brought under cultivation each year this strip grows wider and wider.

"And now you've got your answer," chuckled Binet, "I hope you like it."

"I trust," said he, "that you had a pleasant ride, mademoiselle."

"And not unprofitable, if I may judge that jewel at this distance; worth a formidable sum even to so wealthy a nobleman as M. de La Tour d'Azyr. Would it be impertinent in one who has some notion of becoming your husband, to ask you, mademoiselle, what you have given him in return?"

M. Binet uttered a gross laugh, a

Electrifying Scotland.

Scotland's great electrical scheme, by which it is proposed to concentrate generating plants within ten, and eventually six, stations, instead of forty-two, as at present, is regarded as one of the most important developments since the industrial revolution.

The shutting down of the smaller and less efficient stations, and the interconnection of those better located and better equipped should react to the benefit of the consumer in providing cheaper power. In other countries, and particularly in the United States, this policy has yielded highly satisfactory results, so that there is no reason why it should not prove equally beneficial to Scotland.

Indeed, here has been in recent years a decided trend toward a closer interconnection of electric power systems. What effect this electrical development will have upon the future industrial situation is a matter of conjecture. People of authority are credited with the belief that it is upon these developments that the prosperity of British industry will rest.

While this statement is perhaps far more than many people would care to go to the possibilities of electrical energy in helping to remove the depression which has marked shipbuilding, coal mining and engineering in the past few years are conceded to be immense.

England and Wales will watch the scheme with great interest, for it is the fruit of the projects which Great Britain has formulated. It will be followed at the end of the year by five other plans for electrification in various parts of England. With such developments in view, great changes are certain to take place in the economic situation—changes that may have far-reaching effects not only upon the mother country but also upon other parts of the Empire.

Heroism Amid the Flood.

Philadelphia Inquirer: Acts of sacrifice and heroism shine like bright stars amid the Mississippi flood. The necessity of the hour has stirred the noblest impulses of the human mind. Thousands of men have been brought to general attention. Surely, here should be some recognition of acts like that of the veteran of the World War at Alexandria, La., who single-handed has rescued 108 persons with his small motorboat within a week.

No medal of valor, could fully reward the splendid sacrifice of the Coast Guard officer who plunged into a tossing whirlpool of water, hurling through a break in the levee and "proved" that the rescue boats could go safely through it. "If I don't get through," he told his men. "I did come through and they followed in the wake of the torrent to rescue people perched in trees or on the rooftops. Hundreds, yes thousands of deeds like that call to the attention of the nation's greatest disaster in time of peace.

L'Entente Cordiale.

Paris Journal: Questions of great importance must be settled. There is in the first place the defence of the West. No power surely has had so many illusions as Britain about the possibility of finding a common ground upon which capitalist society and the Soviets could meet. No power has been more rudely shaken from her dream.

It is in London that the "Stand Firm" has sounded, a call which is beginning to take on other quarters. We cannot estimate the danger in Moscow without remembering that there is a strict entente between Moscow and Berlin. The German problem is inseparable from the Russian problem, and the German problem has not been completely solved at Locarno.

Since Locarno, there has been a campaign of propaganda against the Entente Cordiale. It is not precisely the Entente Cordiale which has been the subject of the campaign, but the misunderstandings which have arisen during the last few months?

When a Man's Broke.

I'll go out and buy me a gat
For I can't care where at,
For I know that my wife,
Though she values my life,
She thinks more of a new Easter hat.

Carry On,
He—Before I met you I thought only of making money.
She—Well, don't stop now. Father hasn't as much as you thought.

Some women grow old before their time trying to look young after their time.

Park Speaker—All men are born equal; Hitler—Yes; it's what they are born equal to that makes the difference.

Farm Notes

The official hog grading staff in Ontario under the direction of L. W. Pearsall at Toronto is doing an excellent work, apart altogether to grading duties. The outside men in particular located at Peterboro, Hamilton, Kitchener, and Stratford are constantly on the go throughout the country giving demonstrations at shipping points, visiting farms where hogs are bred, and offering suggestions and assistance in procuring better breeding stock for the farmers. These men work hand in hand with shippers and drovers, giving service to farmers' clubs.

The shipping men and drovers are glad to have their assistance on shipping days to give demonstrations on grading, where to locate farmers that are looking for information in connection with their hog raising.

Quite a number of hog clubs were organized during the past few months following the swine marketing courses. A number of these clubs were desirous of obtaining better sow and through the efforts of the graders many bacon type sows are salvaged from shipments to the packing houses and sent out to farmers looking for a better class of breeding stock. In one week a car load of forty sows were shipped to a Farmers' Club in North Middlesex. Twenty-eight of these were selected at Kitchener and twenty at Hamilton. They are reported to be a very fine lot of sows, and the farmers who received them were delighted with their appearance. These sows cost the farmers \$29 each but down at their market price for the hogs plus feed and a small fee for other incidental expenses.

One of the most successful marketing courses was held at the town of Smithville in the Grimsby district. This was featured particularly by an illustrated lecture to the high school boys, given at the request of the principal of the school. Although Smithville district is noted more particularly for fruit than for hogs, a keen interest was shown in the subject.

The bacon hog fair is becoming a popular institution, particularly in Western Ontario. These have been encouraged at the short course meetings and a number of localities have asked for fairs as early as they can be arranged. The agricultural representatives find in these fairs a class of work which brings encouraging results. The Peel County representative was urging for a fair in his district. The Rockville Agricultural Society is also anxious to have a fair, according to Mr. Earl Rodd of Rockville.

The hog graders returning from some outlying sections report hogs going to market under weight as a result, it is believed, of a shortage of feed. A prominent packer discussing the matter of present hog shipments, expressed the opinion that continued buying on grade would help greatly to discourage shipping light hogs and expressed the view that with the basic price being placed on "sows" a rapid improvement might be looked for.

The earliest and most conspicuous symptom of powdery mildew is the curling upward of the leaves of the strawberry plant so that the lower surface is exposed. The white downy accumulation of the fungus which causes the disease will be seen on the upper turned under surface of the leaves. In severe cases the leaves become dry and the plants may be totally destroyed. If the attack occurs before picking time there may be almost a complete failure of the crop. A new bulletin on the strawberry distributed by the Publications Branch, Dept. of Agriculture, Ottawa, gives complete instructions for the control of this disease. The use of sulphur dust has given good results. It should be applied on the first indication of mildew, and it is generally necessary to make at least three applications. The sulphur may be applied by using a dusting machine, by shaking through a sieve, or by shaking a cotton bat filled with the sulphur over the rows. It has also been shown that even during seasons of severe infection, mildew may be practically eliminated by four applications of 85-15 lime-copper dust at 12-day intervals.

In his report for last year just published at Ottawa the Dominion Animal Husbandman (Mr. G. B. Rothwell, B.S.A.) deals with the very desirable regulation of swine supply. His very rightly points out that the production of swine in this country is seasonal or periodic with the result that the supply of marketable hogs is undesirably irregular, and adds that the British market forms the pattern to which we must mould our hogs, both in type and regularity of production. The bulk of the supply in Canada reaches the market between September and January with a falling off in the spring and the summer. This condition of affairs is reflected in the trend of prices and here, remarks Mr. Rothwell, are wide possibilities for the hog raiser who is in a position to raise fall as well as spring litters. After a suggestion that the average farmer can advantageously regulate the breeding, a table is given in the report which the Dominion Animal Husbandman thinks might meet the two-litter-a-year plan. According to this table, for the spring litter the sow should be bred somewhere between the middle of November and December 20 and she will then farrow from about March 6 to the middle of April. She should be given two or three weeks to get on the up grade and for the fall litter could be bred from about the first week in May to June 10 or 12, so that she would farrow by the end of September or by October 3rd at the latest.

Stranger—"How does the land lie out this way?" Villager—"It ain't the land that lies; it's the real estate agents."

A wise man is one who never argues with a woman.
