

Sunday School Lesson

November 5. Lesson VI.—Amos Pleads for Justice—Amos, 5: 1, 2, 10-15, 21-24; Goldan Text—Let Judgment run down at waters, and righteousness as a might stream. Amos 5: 24.

ANALYSIS
I. A PROPHET AND AN INTERCESSION, 5: 1-15.

II. VISIONS OF INTERCESSION AND A DREAM, 5: 18-27.

III. VISIONS OF INTERCESSION AND A DREAM, 5: 28-29.

A DAINTY-NIGHTGOWNS.

The woman who delights in making dainty garments will find this attractive nightgown quite simple to fashion. The sides of the front and back are slightly gathered and joined to a scalloped yoke effect, which also forms short sleeves. No. 1676 is in sizes 34 to 44 inches bust. Any size requires 2½ yards 36 to 39-inch material. Price 20¢ the pattern.

Transfer Design No. 1049 is used to ornament the yoke.

Many styles of smart apparel may be found in our Fashion Book. Our designs originate their patterns in the heart of the style centers, and their evolution are those of tested popularity, brought forth in the name of the average woman. Price of the book 10¢ each.

HOW TO ORDER PATTERNS.

Send your name and address plain, giving number and size of such pattern you want. Enclose 20¢ postage or 25¢ (for green; wavy; wavy & curly) for each number and address your order to Pattern Dept., Wilson Publishing Co., 73 West Adelaide St., Toronto. Patterns sent by return mail.

Fashion Notes

It's very important to own a number of sweaters if you have any tendency to catch cold easily.

If, on the other hand, clothes are to be worn, it is better to own a number of light-colored, thin, and comfortable things, in which case, a wet wash should be fed daily, about all that the birds will consume, and any other palatable foods available should be given in an effort to increase the food consumption.

Potassium permanganate, or a similar disinfectant, may be profitably kept in the drinking water while the flock is suffering from colds, in an effort to shorten the duration of the disease.

When individual treatment is desired, nostrils should be cleaned as often as possible.

Following this, a solution of twenty drops of oil of camphor into the cloft of the nostril of the typus to one ounce of mineral oil should be injected into each nostril.

In the case of particularly valuable birds a twenty-four cent solution of argyrol can be injected into the swelling under the eye with good results.

In severe cases of roup, a solution of argyrol in two or three applications will usually completely remove the disorder.

J. A. Hannah.

A little girl was travelling in a train with her mother, a woman of very slight frame, but the carwoman, hardly the carwoman, had the car.

The train stopped, the child came up to the woman and impeded the woman's

turning to her, turning to her, in a loud voice.

"Mother, is that all you have?"

"I was travelling in a train with my mother, a woman of

very slight frame, but the car-

woman, hardly the car-

woman, had the car."

The New Skirts.

The skirts worn with the smooth sweater are always related to them. Sometimes they, too, are knitted, and then they match exactly. When they are fabric they are twed on a fine homespun, huck, wool crepe or jersey. Or they may be heavy crepe de chine. In the latter case they will be deeply pleated all the way round. In

woolens the familiar wrap-around is still popular.

There are many sorts of pleated skirts, from narrow box pleats an inch wide to box pleats five or six inches wide. There are corduroy and knife pleated skirts, and skirts with merely one or two larger pleats in the front. A small number of very smart new skirts have circular fullness in front or just at one side.

British To Investigate African Federation

London. The Government commission to investigate the possibility of co-founding the British Empire in Central African territories including Kenya, Uganda, Northern Rhodesia and Nyasaland has now been appointed. Sir Hilton Young, financial expert will preside with Sir Reginald Maut, ex-diplomat, administrator, Sir George Schuster, financial secretary of the Sudan and Joseph H. Oldham, secretary of the International Missionary Council as members, and Harold F. Dowse of the Colonial Office as secretary.

The prophet Amos, in his assemblies, often reproaches his audience for wealth and power. Amos turns this desire into a day of judgment upon the rich nations. Jehovah is angry with the wealth and not with flesh and its fat. The prophet's desire of them will be those who feed whom they hope to conquer. It will be a day of defeat and of victory, in which there will be no safety and no escape for the wife has a friend against her.

The great prophet, Amos, assembles

Fall Colds

Chickens With Feathers Get Them As Well As Those Without

Fall colds are quite common in poultry flocks at this period of the year, the inspectors reporting that approximately one-third of the flocks they inspect are infected to a greater or lesser degree with fall colds.

Colds in poultry are somewhat similar to colds in higher animals and are not fully understood.

It is commonly accepted that they are caused by a disease organism which as yet has not been isolated.

They can be detected in the flock by the watery discharge

from the nostrils of the affected birds,

a rattling in the throat, and in severa

cases, a swelling of the eye.

The nasal discharge has a very disagreeable odor.

The nasal passages oftentimes become clogged with straw, dust, etc.

making it impossible for the nasal discharge to escape, causing a back-

ing up of the discharge through the tear duct, and in severe cases,

at the front of the bird's eye, which sets up much irritation, and the eventually develops into a mass of yellow, crusty material,

bringing about the condition which is commonly known as "ropy."

An ordinary cold may pull down many feathers and disease resistance of the birds, especially susceptible to other atmospheric influences. Improper or insufficient roosting in trees, or in unheated housing, in damp, marshy ground, or any like condition, may reduce the bird's ability to withstand colds.

Ordinarily, if proper feeding is con-

tinued and the housing conditions im-

proved, the affected birds will recover

without treatment.

However, in very severe cases

the loss of eggs per

able period of time.

Treatment.

When colds are present, the first

order should be to get rid of the

feathers.

Then the feathers should be

removed.

Every effort should be made to in-

crease the heat consumption of the birds.

In most cases, the birds eat

very little in which case, a wet mush

should be fed daily, about all that

the birds will consume, and any other

palatable foods available should be

given in an effort to increase the food

consumption.

Potassium permanganate, or a simi-

lar disinfectant, may be profitably

kept in the drinking water while

the flock is suffering from colds,

in an effort to shorten the duration

of the disease.

When individual treatment is de-

sired, nostrils should be cleaned as

often as possible.
