

MURDER ON THE HIGH SEAS

The Ship That Never Came Back and the Fatal "20"

By CHARLES KINGSTON

The sin which has been found out carries its own punishment with it, and the punishment may be greater than any man imagines, though it is seldom so overwhelming as in the case of the shipowner who received a letter from the Old Bailey during a period when the mercantile marine was homebound with freight. Wilson—I think that was the name of the culprit—was a man of considerable means and position, but the substantial profits derived from the carrying cargo from Liverpool to the Mediterranean ports did not satisfy him. He was anxious to build up a great fortune for his only son, a handsome man in the early twenties, who had learnt seamanship on one of his father's boats.

A Floating Death-Trap
Wilson's get-rich-quick idea was original; it was to buy an ancient worthy ship, patch it up, and having insured it heavily, send it off on a voyage from which it was not likely to return.
As his reputation stood high in the shipping world, and the vendors of the vessel and the captain and crew suspected his little plan, he cut the story short, a month after the ship left Liverpool. It was reported at Lloyd's as having been lost with all hands on board.

The insurance money, a very large sum—was paid to Wilson, who had been living quietly at his house in Liverpool, proceeded to London to look up his son, from whom he had not heard for some time. The young man, liberally supplied with cash by his father, preferred the metropolis, and the diligent parent humoured him in every way.
His Son Had Found Him Out
When he reached London Wilson drove to his son's flat in the West End, and was informed by the servant that the young man had not been home for seven weeks. Not in the least alarmed, the father sought out one of the boy's boon companions, only to be told by him that young Wilson had not been seen anywhere for several weeks.

The insurance swindler, who had gained a fortune by the murder of a young man, was called to account when the father, who had been told by his son's boon companions that Wilson had not been seen anywhere for several weeks, sought out one of the boy's boon companions, only to be told by him that young Wilson had not been seen anywhere for several weeks.

Son's Oath of Vengeance
The young man, suddenly freed of his father's later, inquisitive hand, had been to the police and had reported to the captain of the ship which his father had sent to the bottom of the sea.
The insurance swindler, who had gained a fortune by the murder of a young man, was called to account when the father, who had been told by his son's boon companions that Wilson had not been seen anywhere for several weeks, sought out one of the boy's boon companions, only to be told by him that young Wilson had not been seen anywhere for several weeks.

Across the Atlantic
Some hint of this reached the father, and a few days before he was to have been to New York, he looked a passage by a steamer going to New York. So when the young man called at his office, he learned that the lawyer had departed to New York on the following day by the next train, and on board the ship within a few hours of his departure, he told the man he intended to murder.

A Sleepless Night
The father, who had been told by his son's boon companions that Wilson had not been seen anywhere for several weeks, sought out one of the boy's boon companions, only to be told by him that young Wilson had not been seen anywhere for several weeks.

Interesting Historic Ball

LT. GOVERNOR OF QUEBEC IS HOST TO OLD TIME NOTABLES
Standing, left to right: Prefector, Pacheco; D'Agusse; Mrs. Richard McKenna, the Governor's daughter; Marie Leczinska; Lord Willingdon as Charles I.; Lady Willingdon as Queen Henriette Marie; G. V. Prescott (the host) as Louis XIV.; Seated—Miss Merceus as Marie Louise de France; Capt. Ingo Esmond-Thomas (son of Lord Willingdon), as the Duke of Buckingham; Mrs. Freeman-Thomson as the Duchess of Buckingham.

OLD MINES REVIVE—COME INTO THEIR OWN

Mining Discoveries of Early Days Assume Proportions of Value As Boon Progresses

SOME EARLY HISTORY
In view of the large program of development being carried out in the country contiguous to the Columbia River south of Golden, British Columbia, it is interesting to recall the first application of the principle of floating to the carrying of lead ore in British Columbia.

The story of the Giant in the story of mining progress all over Canada. They are to be found from the old conditions under which the first possible conditions were never so far removed from the present as they appear to be. The story of the Giant in the story of mining progress all over Canada. Protective Sea
Unfortunately these conditions have been slowly but steadily deteriorating in the past. The conditions have been slowly but steadily deteriorating in the past. The conditions have been slowly but steadily deteriorating in the past.

Planning Ahead
Food was cooked by the Indians in the kitchen, which was high up in the house. The only difficulty about carrying was that the food had to be carried up the stairs. The food was cooked by the Indians in the kitchen, which was high up in the house.

At Luncheon
Luncheon at 11:30 afforded a more scope for our Chinese table. A 15-cent slice of fish, boiled, served, in a vegetable, was a favorite dish. A big square fish cake, which was also delicious, though the fish was not.

Short Wave Length Seen As Certain Development

Commissioner Caldwell Rejected to Many

Washington (A. P.)—During 1928 the spotlight of public interest in radio will turn upon the long-reaches of the radio spectrum below the broadcasting band. For invention and commercial development these channels are vast terra incognita, in which pioneers are now exploring and stating their claims.
In the short wave region we may expect during the year a rush of applications for channels which in its commercial, industrial and economic repercussions will make the recent scene mild by comparison. Aside from all other communication demands, it is clear that future aviation programs will depend wholly on these short waves for communication to airplanes in flight.
In the broadcasting band through various methods of synchronizing the carrier frequency of stations we may succeed in multiplying by several times the carrying capacity of existing channels for regional stations. Chain station operation by but three

Housekeeping in The Southern Seas

Furnishing Coral Dwellings—Fish and Fruit Merit Items

Our coral houses in the South Seas sounds so little that it might be the creation of some ultra-comfortable imagination. Such an insane waste as "housekeeping" probably never enters one's mind in connection with them.
Yet keep house I did, while the band was to the plantation. The house itself was the most typically conceived dwelling for a tropical climate. It was built by a man who had lived in the place for many years, and this was his home, and perfect as in his own estimation.

Wall Coverings
Our two house servants were from the island, and a native boy acted as boot-boy and sentry.

radio history and important respects. A brief radio control and regulation, passed by Congress. Television, long by radio, was accepted and widely demonstrated. The popular receiving set became a social product, merchandised on a scale. Adaptive radio channels have been cleared, reaching into homes. And the international cooperation among security nations in radio development have been and protected from inter-

ing Tower Of Pisa in 1927
The Tower of Pisa was begun in 1173 and was nearly finished in 1198. It is a masterpiece of Italian Gothic architecture. The tower is famous for its tilt, which has caused it to be called the Leaning Tower of Pisa. The tower is 147 feet high and is made of white marble and limestone. It has seven stories and a bell tower on top. The tower is a symbol of Pisa and is one of the most famous landmarks in Italy.
