## Strange Island in Indian Ocean Ruled by Fierce, Barkless Dogs

Juan de Nova, Situated Between East African Coast and Madagascar, Populated Entirely by Wild Packs Which Attack All Island Visitors

Town—A French schooner which has arrived at Table Bay visited strange island of dogs during her voyage.

"We were steaming northward between the East African coast and Madagascar," said the captain, "when a whale came alongside at dawn I saw through my glasses the tarpaulins of a ship."

"No smoke came from her funnel, no white wave broke about her bows. She did not lift to the long Indian Ocean swell. When I had circled around the whale, she was a wreck of the coast reef of Juan de Nova."

"Juan de Nova is the island of dogs, seafarers who have lost their bark."

There have been others since. Spanish, where all the hungry seals eat the dogs of Constantinople, were scattered widely. But jungle beasts, like the dogs of Juan de Nova, who have lost their bark, rule the island.

In the days of sail, blithedome of all nations of all races, the sailors of Juan de Nova traded water fruit and turtles. Dogs of every breed, from Europe, escaped on ships, and were left behind.

Today, descendants of wild monkeys, the island of Juan de Nova, when a steamer sailed

for Juan de Nova, situated in the territories of another. They travel out of the sea occasionally and attack seals with the skill of jungle beasts. No one who has the dogs of Juan de Nova doubts that their household pets had their origin in the wild. These dogs are as fierce as any Siberian wolf.

For years they have remained unmoored in their island kingdom, palms and banana trees.

The island inhabitants of Juan de Nova almost as dangerous as the buccaneers of last century.

The physician should not perceptibly order one or more teeth extracted, nor should the dentist extract the teeth of a person who is found by his physician or in need of medical care, without consulting with the physician who has instances are now on record and probably the reported cases referred to, a small minority of serous complications following the extraction of teeth of dental and medical importance in the extraction of teeth in more or less serious conditions. These instances of death following soon after the extraction of teeth were recently reported by Buckley. The removal of teeth is a surgical procedure, though generally a minor one, that requires preoperative cleanliness, skilled technique and, if there is infection, and suppuration, careful and untiring operative care. A tooth should generally not be removed until a roentgenogram has been taken and commented on by a skilled roentgenologist. The gun of a patient with pyorrhea should rarely, if ever, be punctured for the injection of precipitate hydrochloric acid or any other substance, as these punctures offer absorbing surfaces for the bacteria already in the mouth. The surgical treatment of a septic mouth after operation should be the same as that of any other part of the body that is septic. The necessary extraction of septic teeth will not cause death, but the neglect of medical and surgical care of the patient associated with any surgical operation may do so."

## Lord Dewar Blossoms Out As Composer of Epigrams

Lord Dewar's boy Thomas, Robert of Perth, is reasonably well known as a member of Buchanan-Dewar, Ltd., publishers, the author of a book on prohibition in the United States, Canada and New Zealand States. Being a globe-trotter, he now comes forward as a maker of epigrams, some of which have been carefully collected by Pearson's Magazine, London, and as follows:

"To my surprise several bats took notice and came about me in the water, but showed suspicion and did not attempt to land. I realized this and it gave me a surprise, and wrote I suddenly jumped up and yelled at the top of my voice."

"It they were surprised, far more to me, for a giant wolf had been hunting me and was within ten feet yards of me when I jumped up, apparently at the phlegmological moment. Under the conditions, he probably just threw me for a goal, for which the wolf feed, and it must have been surprised that he attacked while I was lying down. The interplay of power between the two and the timber was, say, a couple of hundred yards. I estimated that in spite of his excessive speed he must have touched the sand at least a couple of times in his wild flight for a while when he realized the true state of affairs."

## Too Many Teeth Pulled

To many teeth are extracted with entire satisfaction, with justification, asserts an editorial writer in The Journal of the American Medical Association (Chicago), two opposing conditions. It says, are constantly present: first, an infection in the mouth must be eradicated; second, teeth should not be extracted if the infection can be otherwise eliminated. He goes on:

"Discussion of the relationship of tooth infection to certain systemic diseases, of course, no longer seems necessary. It is self-evident that all teeth and pathogenic load in the mouth should be removed. Success in this demand more frequent consultation between the dentist and the family physician. The physician

should not neglect to see a doctor to know where to vaccinate to-day to prevent the marks showing.

We have a great regard for old age when it is bottled."

The man today who hides behind a woman's skirt is not a coward; he is a magician.

Some are born good, and others make good.

Avoid the man who will not stop to see a dog fight. He has lost all interest in life.

## FLOWERS and VEGETABLES No. 5

One of the first jobs to be carried out after a new house is built and only succeeds in leaving finger prints at Seetham Yard.

Some men electrically their audiences; others only gas them.

Folk is cheap, until it gets into love letters.

The road to success is to turn over a beehive in a ballroom.

The first intimation in the Bible of broadcasting was when Adam gave a spare part which developed into a loud-speaker.

You cannot blame a girl who pays shillings for a pair of silk stockings, showing 28 shillings worth of them.

The clothes that make the woman the clothes that break the man. Doctors must be in a dilemma to know where to vaccinate to-day to prevent the marks showing.

We have a great regard for old age when it is bottled.

The man today who hides behind a woman's skirt is not a coward; he is a magician.

Some are born good, and others make good.

Avoid the man who will not stop to see a dog fight. He has lost all interest in life.

Annual climbers such as wild hops, sweet peas, morning glory and several others may be trained by means of clumps of shrubbery or tall annual flowers. For a more permanent job, Boston ivy, Virginia creeper, Dutchman's pipe and similar perennials may be used but these will take longer to grow.

Flowers in addition to being beautiful bloomers furnish fresh string beans of excellent quality for the table. The morning glories may be mixed with these for a thicker foliage.

This is the month for pruning in the small garden and larger place too. All of the dead canes should be removed from the raspberry patch as well as the spindly ones among the new growth. Some of the old wood should be cut away from the gooseberry bushes and currants. Grapes must be pruned early to avoid excessive bleeding. These vines should be cut back to a bare skeleton as the fruit is borne on the wood grown this year. Fruit trees should be pruned up to let in sunlight and air.
