

In Asia, Lester Tells London

States, said the expedition last year in the Gobi Desert that Mongolia was the great distributor for the animal life of prehistoric areas.

tion to remains of mammals, of primates like the

found traces of human

in the Stone Age, Andrews

said.

Indicated, he repeated,

"Are men deeply interested in the past?" They sub-

jects of birds and trees? No

remains were discovered, but

remnants of the Stone Age

and "They included bone

fragments, as well as stone

arrowheads and pieces of

burned pottery."

Penetrated Desert.

After penetrating the vast

deserts of Central Asia

and working in a district

about 100 miles west of Peking,

Andrews

concluded the re-

turn there resembling a

wall with a saddle-like

an arched rock saddle,

was the form

which the

had found. Dinosaur

and the embryonic skele-

ton parts

could be found

and the head to have

hatched bones to present a

keleton to the New York

"Nature" Museum.
