

### Rumanian Royalty A Distressing Scene

Queen Marie, Interferes with  
Young King Michael and  
is Evidently Asked to  
Leave Palace

#### STRANGE TALES

Berlin—A report received from authoritative sources in Bucharest said that Dowager Queen Marie of Rumania had fled from the Royal Palace at Bucharest because of distress in the Royal Family.

Rumors of strife between the Dowager Queen and others of the family have been current for some time. It was declared that several of the family were opposed to her inclination to interfere with the regency which presided over Rumania on behalf of her grandson, the young King, Michael I.

Only recently Princess Elena, 29-year-old daughter of the Dowager Queen, setting out in her yacht, the Iskra, to visit her mother at Balchik, narrowly escaped disaster when the yacht struck a reef near the coast. The yacht was pulled off by a tugboat and towed back to Constantza, its starting point.

#### Was Ejected in Report

An unconfirmed report stated that Marie was actually ejected from the palace after an intermediary acting on behalf of the Princess Helena, mother of the young King, requested the Dowager Queen to leave the palace.

Under the terms of the testament of the late King Ferdinand, the palace belongs to young Michael. Marie retained the palace, she had in a small wing of the palace, but continued to use the main entrance.

#### Furniture Thrown Out

Several days ago, Queen Marie was forbidden to find several pieces of her furniture had been moved into the courtyard. The situation was aggravated by numerous imitations which she then received, that her removal had become imperative.

After the furniture, Queen Marie sought refuge in the wing, and the royal architect advised her that he will command to build her a separate entrance.

#### Incident is Another in Series

The incident is another in a series of the recent past, which recently followed the Rumanian Royal family being the sensational street fight between Marie's son, Prince Nicholas, and the officer John Babin.

#### Case is Typical

The case is typical of the Rumanian royal family, which has been a source of trouble since the death of King Ferdinand.

#### Business is Exceptionally Good

On the whole, the business situation in Canada is exceptionally good. The recovery in the stock market is a good sign, and the general outlook is optimistic.

#### Sir William Cope Says Turner Valley Offers Possibilities

Another Sphere Where Canada's Natural Resources Will Help Build Up the Country

Calgary, Nov. 2.—Sir William Cope, British minister in Ottawa, has been in the Calgary district for the past fortnight, and during that time made an extensive study of the Turner Valley field and of other structures in the southern part of the province.

### Lakehead Storage Sets New Record

High Piled Bins Contain 76,062,000 Bushels of Grain

#### BIG GAIN IN DAY

Working Margin of Ten Million Bushels Encroached on for First Time

Winnipeg.—Swelled by an added store of more than half a million bushels of grain, storage at lakehead elevators pushed upward to an unheard-of mark for the season. The record of 76,062,000 bushels in the high-piled bins showed an advance of 655,000 bushels over recent figure which was itself a new high mark for the season.

The new figure established a record in the history of the Port Arthur and Port William elevators for the first time of the so-called working margin of 10,000,000 bushels but the larger working margin is stated to be necessary for convenient handling of the grain.

Rise in lakehead storage came in spite of a substantial shipment of 1,560,000 bushels eastward by four boats recently. The increased storage showed as its result, however, that cars awaiting unloading at head of the lakes elevators were decreased by 200 to a total of 4,200 cars, and lakehead unloading outnumbers arrivals in 7,222 cars to 505.

The number of cars waiting to be emptied into the Port Arthur and Port William elevators are the lowest figures for two full weeks. Meanwhile, car loadings at prairie points showed a slight decrease, and marketing by country farmers increased a little to 1,098,000 bushels, still a comparatively low daily figure.

Though half of the storage space in prairie elevators still remains unfilled an increase of only 9,000 bushels was noted in the country storage in the last 24 hours. Present figures are 65,168,000 bushels.

### Illegal Radio Station Leads U.S. Authorities to Liquor "Ring"

Unlicensed Transmitter Used by Bootleggers Traced by Decree Engineer; Decipher Code and Uncover the Secrets of Rum Violators

An unlicensed radio station operating on a short-wave length, contributing largely to the unding of the most extensive liquor "ring" which the U.S. government has ever uncovered, was disclosed following the making of raids along the Jersey and Long Island coast, which resulted in the arrest of thirty-two men and the seizure of large quantities of liquor.

Operating in the band of wavelengths used largely by amateurs, it is possible that the station might have escaped detection had it not been for the fact that it was in operation over long periods, sometimes as much as fifteen to eighteen hours at a time. Search of license records failed to show any station with the call letters which were being used, nor were its messages decipherable, being in code.

Engineer Runs Down Station. In an effort to run down the bootlegging station, Forest Reider, formerly an engineer of the Signal Corps and now a radio engineer in the Department of Commerce, was given the assignment of locating the station and deciphering the code. Vaguely, it was Reider's detecting which led to the routing of one of the greatest liquor rings ever encountered by the prohibition officers. When the station was reported in central New Jersey, Reider, with a staff of radio experts, set out to find the station with a directional radio receiver installed in an automobile. Although deciphering the code was more difficult than locating the station, Reider soon solved the fairly simple cipher used by the station. Messages were copied for several weeks prior to the raid, and the translations of messages turned over to the Federal authorities.

During the course of the raid, the radio station was included and it was found that not only was the station unlicensed, but the operators also had failed to comply with the Department of Commerce's regulation requiring all telegraph operators to be licensed. Inasmuch as the law provides penalties ranging as high as \$5,000 fine and five years' imprisonment for operators of unlicensed stations or for unlicensed operators, the man found at the key when the raid was made is about as serious a predicament as any man who has ever been in the possession of a radio transmitter.

The man found at the key when the raid was made is about as serious a predicament as any man who has ever been in the possession of a radio transmitter.

### Italy's Big Boss Sore at France

Italian Papers Incensed at France for Harboring Anti-Fascist Exiles

London, Nov. 2.—The British authorities are watching with some anxiety the attacks being made against France in the Italian press, following the attempt on the life of the Italian Crown Prince at Brussels.

It is even suggested that the Italian press is being incited to make a campaign of vilification against France.

France is accused in Italian newspapers of sheltering the man D'Amico, when he crossed the frontier without a passport, and giving him a police card which enabled him to leave Paris for Brussels.

Previous to this incident, considerable friction had developed between Italy and France which had cropped up when attempts were made by the Italian, resident in France on the lives of prominent Fascists, including Premier Mussolini.

Italy has frequently demanded that the shelter given by France to anti-Fascists must cease.

Hitherto, the French have retorted that if they take steps to deport the anti-Fascists they will have to deport the entire Italian colony resident in France, which Mussolini does not certainly desire.

One Italian newspaper asks bluntly if France wants war but the majority of attacks on France, while bitter in tone, are more moderate in substance than this. The Giornale d'Italia says, "For her own defence, Italy has a duty to do by making a categorical declaration that the protective tutelage hitherto given to anti-Fascist exiles on French territory has become the fundamental problem of Italian relations with France. It really seems as if France has no intention of regulating her debt of loyalty and peace to Italy."

"We ask, therefore, this time, does France intend to continue to sponsor a movement whose aims are directed against the Italian State? Today, no one can quibble any longer that it is not the friendship of the two nations that is involved but a clearing up of the Franco-Italian situation."

U.S. Unemployment Hamilton Spectator (Ind. Cons.): It has been estimated by the Department of Labor of the U. S. that there are more than a million men and women in the Republic idly walking the streets in search of employment.

On this side of the border line, sometimes make the mistake of considering our neighbor's prosperity to be traditional, something to be taken for granted. But it is a fact that throughout this year, in comparison with population, there was much less unemployment in Canada than in the United States.

Better Salesmanship for British Goods Regina Leader (Lib.): The Canadian consumer buys few British products because he never hears about them. He reads ten advertisements of other products to one British advertisement in Canada. The result is that he buys the goods he reads about. British goods are as a rule of high quality, but in the eyes of our consumer, and more enterprising selling methods they will not sell themselves.

### Factor Britain Must Bear in Mind

It is Not Recognized That British Manufacturing Production Now Far Exceeds Agricultural Production

"We all remember the Canadians were regarded as indeed ready to regard the producers of an immense stock of raw materials, changed for British manufactures. The position is quite different."

It is true that Canada's farm produce is still staple despite occasional setbacks in the wheat crop of this year. "The wheat yield in the past five years has averaged 400 million bushels, and the average annual value of the boom something like \$100 to \$200 million sterling. The all agricultural products more than fourfold in five years ago."

But the fact remains that manufacturing production in Canada is not so abundant as it used to be. The Commission in Canada is not less than \$5,750 million in total, including \$1,000 million in Canadian factories, and might cover a very large part of the country's needs.

Thus it includes cotton cloth, men's and women's hosiery and gloves, rubber goods, electrical machinery, railway rolling stock, forgings, sheet metal products, tinware, hardware and brass and copper products.

The question is whether we are to continue to rely on the United States for our industrial expansion. The United States is a vast country with abundant opportunities for industrial enterprise. Some of the better methods are being used in Canada, but the Canadian industrial production is not so abundant as it used to be.
