On Wings of Wireless
by ARTHUR B. REEVE

CHAPTER I—(Cont.)
"So, here you are, Ben looking all nice and fluffy today for you, Guy?" It was Dick Deffen, the man you've heard this new tale of Dame Reuter about the Radio Dance last night?"

CHAPTER II
Dick and Ben were anchored off one of the best bathing beaches to the west, between the city and the country. A lot of the young folks charter! it and chose that spot because it was not far from the Club and yet not too far out from the city. It's a bit out of the way, but that makes them practically on the beach and that end of the harbor for their swimming races and water sports. Some of the sportier older folks go with them—once in a while."

Novel Tunnel To Take Water To Ford Plant

Engineers Driving Tube 2 1/4 Miles at Detroit for Adequate Supply
Detroit—Digging from 45 to 60 feet under city streets, tunnel engineers are driving toward the completion of a novel water tunnel 2 1/4 miles long and costing between \$2,000,000 and \$3,000,000. It is intended to supply the enormous River Rouge plant of the Ford Motor Company with an adequate source of water. The tunnel will be about 15 feet in diameter, built of brick and concrete, with a steel lining. The chain of events that led to the need for this engineering work started five years ago. Ford's Highland Park plant was then considered the largest automobile plant in the world and produced more than 7,000 cars and thousands of employees from the Highland Park plant to the River Rouge plant without interrupting production of the new model A car it comprised one of the most fascinating chapters of Ford history.

But due to this expansion a greatly increased volume of water had to be obtained and it is this problem that the tunnel leading to the plant from the Detroit River through an inlet near Zug Island, at the mouth of the River Rouge, is to solve. Some idea of its enormity may be discerned by the engineers' figures, which show it will divert 500,000 gallons of fresh water a minute or 750,000,000 gallons a day.

Under the old system, the water flowed from an intake in the Ford Canal, slipped directly into the plant and emptied into the River Rouge below the intake. But the tremendous volume used revealed the flow of the river and it was found that the same water was being pumped back into the plant. This water was not only too hot to be used for cooling purposes, but it was also only with difficulty.

In a Guatemalan Forest

In the last part of the birds and mammals which were brought to the attention of the author in the early morning. . . These magnificent birds are becoming rarer and rarer every year in Central America and these vast, uninhabited forests of the Peten district of Guatemala are probably their last stronghold. We owe this generous bird a debt of gratitude, for it is the ancestor of our domestic turkey, an unworthy descendant who has lost in flavor and other qualities more than he has gained in weight and size. They are, I fear, like the Malayan tinamous, hunted to cope with modern conditions, and are consequently on the road to rapid extinction.

The Building Climber

The building climber is a man who has the ability to climb a wall without the aid of ladders or scaffolding. He is a man who can climb a wall of brick or concrete with ease and grace. He is a man who can climb a wall of steel or iron with ease and grace. He is a man who can climb a wall of any material with ease and grace.

The Modern Girl

She will not wash the dishes, for it makes her hands so red; She will not sweep the parlor floor, it makes her hands so red. She will not even dust the chairs, nor wash the small things she wears, nor help her mother pickling pears; it makes her hands so red.

Japanese Diplomats Land

"The destinies of Canada and Japan lie together in the great Pacific Ocean," declared Ito, Iwano Toki-gawa, K.C.M.G., first minister to represent the Emperor of Japan in Canada, when he reached the Dominion on board the Canadian Pacific line Empress of France at Vancouver recently. With him he photographed the Hon. Takuma, Japanese Consul General. Mr. Takuma is the son of Prince Iyeyasu Tokugawa and a man of long experience in diplomacy. He was on his way to Ottawa to present his credentials to the Canadian Government from the Japanese Emperor.

Pleasure Resort Loses Argument

Deauville Must Consult-Trouville Over Harbor Extension
FISHING TOWN WINS
Paris—Deauville and Trouville, these sea-side towns, have been in a bitter struggle for many years. Deauville, a town of 12,000 people, has been the victim of Trouville's ambitions. Trouville, a town of 8,000 people, has been the victim of Deauville's ambitions.

Seals Taught to Swim by Mothers, Explorer Reports

Young Afraid of Water, Roy Eulis Fights Fear
Seattle—An Alaskan fisherman reports that he has discovered that seals are taught to swim by their mothers. The young seals are afraid of water and it is their mothers who teach them to swim. This is a remarkable discovery and it shows that seals are intelligent animals.

For Foreign Missions

Boston Post Bulletin—Bible study a part of Boston's religious life in the past year. From all over the city, people have come to the Bible study classes. This shows that the Bible is still a source of inspiration and guidance for many people.

Muskrat Started Earth Formation, Indians Believed

Only Water Animal to Reach Bottom as Man Floated About Ocean on Raft
John Fredson, a full blooded Algonkian Indian, brought to 'The Boston Globe' office an ancient Indian account of the beginning of the earth. "There was once, a long, long time ago, a man out on a raft of water. There was no land anywhere—just water."

The man called upon for many days. He began to think of himself, and I could hear him always trying to find some land somewhere. He went down to the bottom of the water, and he found a muskrat. The muskrat was the first land animal to reach the bottom of the water. The muskrat was the first animal to reach the bottom of the water. The muskrat was the first animal to reach the bottom of the water.

The Future of Cotton

The Forthright Review: Valuable as are the various forms of relief which the industry has recently received, and those which it is hoped may possibly accrue as the result of the impending commission, they will not be able to restore much of Lancashire's lost trade. They should rather be regarded as helping us to retain the trade. Moreover, when we are successful in undergirding the home industries of Japan, India and China in coarse goods, we should probably have high tariffs raised against us.

Needle Pain!

Some folks take pain for granted. They let a cold run its course. They wait for their headache. If suffering from a headache they let it run its course. Mediators, they call it. Unnecessary, they say. Aspirin is the best. Aspirin is the best. Aspirin is the best.

Christie's Water

Christie's Water is a powerful water purifier. It is used to purify water and to remove impurities. It is used to purify water and to remove impurities. It is used to purify water and to remove impurities. It is used to purify water and to remove impurities.
