

English Motorists Turn to Closed Cars

The British With 40 Million People Have as Many Cars as Canada With Her 9 Million

MOTOR SHOW NOTES

Great Britain in 1923 there were 384,000 private cars registered, in 1927 the total rose to 778,000, and in 1933 the figure reached 906,557.

The total number of motor-vehicles at the beginning of this year was 1,322,771. The total consumption of motor spirit for the first six months of this year was 433,527,847 gallons.

The total output of cars and commercial vehicles for last year was 211,877, which was made up of 165,552 cars and 46,525 commercial vehicles.

In car and chassis exports for 1933 the total for the first six months of 1933 was 152,396 and 15,932, respectively. Figures for commercial vehicles were 6,771 and 1,900, respectively.

At the motor show, there are fewer than nine vehicles to the mile of road.

The motor show is a triumph of color, though there was a feeling that a car the sides of which were painted in different colors was going a little far. The color schemes struck one as on the whole in excellent taste, avoiding the extremes of the freakish and the dull.

"One point that interests everyone is that there are many small inventions and improvements in the way of safety devices which should help to safeguard the public against the incompetent driver and the incompetent driver against himself. One noted hydraulic shock absorbers, safety brakes, and non-splinterable glass.

"The vast majority of the cars, even the cheapest, are of the saloon or closed type. It would seem that the open car is becoming obsolete. Like the open bus, it has become a relic of the past.

"The motor show has become one of our democratic institutions. It is open to all the classes of the population, and it is a place where the motor-car world is at its best. It is a place where the motor-car world is at its best. It is a place where the motor-car world is at its best.

A Magic Carpet

The motor show is a triumph of color, though there was a feeling that a car the sides of which were painted in different colors was going a little far. The color schemes struck one as on the whole in excellent taste, avoiding the extremes of the freakish and the dull.

"One point that interests everyone is that there are many small inventions and improvements in the way of safety devices which should help to safeguard the public against the incompetent driver and the incompetent driver against himself. shoddiness; and the motoring public is becoming more fastidious.

"The increasing tendency this year to substitute six-cylinder engines of four-cylinder in all but the cheapest makes illustrates this desire to possess smoother and more powerful machines, even if the running costs are greater. No doubt it also shows the intention of British manufacturers to concentrate on a type of car which will be more acceptable abroad.

"There are many indications that manufacturers are realizing that the home market will one day each gain a point, and that they must seek further expansion in foreign markets. Apart from Britain, and apart from Europe, there are vast markets in the Dominions, in which the excellence of our manufacture ensures success as soon as their special requirements are studied.

The Triumph of Color

"This is the greatest motor show one remembers to have seen," says the Manchester Guardian.

"The brighter motoring movement is illustrated by many examples of cheerful color—blues, greens, reds, and yellow, and all combinations of these. In former years the few brilliant cars have been regarded with rather indulgent amusement, as due to the artistic ambitions of the designer, chiefly the Italian.

"This Show is the triumph of color, though there was a feeling that a car the sides of which were painted in different colors was going a little far. The color schemes struck one as on the whole in excellent taste, avoiding the extremes of the freakish and the dull.

"One point that interests everyone is that there are many small inventions and improvements in the way of safety devices which should help to safeguard the public against the incompetent driver and the incompetent driver against himself. One noted hydraulic shock absorbers, safety brakes, and non-splinterable glass.

Introspection

The motor show is a triumph of color, though there was a feeling that a car the sides of which were painted in different colors was going a little far. The color schemes struck one as on the whole in excellent taste, avoiding the extremes of the freakish and the dull.

"One point that interests everyone is that there are many small inventions and improvements in the way of safety devices which should help to safeguard the public against the incompetent driver and the incompetent driver against himself. London Has Moved Back to the Ocean

Transatlantic Passengers in Biggest Ships Can Land at Tilbury Docks

London, which has moved back to the ocean, when it used to be in the days of Drake. By spring when the next lot of transatlantic mail ships, the *London* and the *London*, will be in the dock at Tilbury.

Instead of disembarking at Southampton or Liverpool and going 25 to 200 miles by train, they will be able to land at Tilbury docks, a half hour's ride from the big London hotels. The new Tilbury entrance, capable of handling any passenger ship abroad, was opened recently. It serves the new link between London and the sea. It is a link which is being built up by the building of a new dock and faster lines between London and the sea.

Scots Sabbath is Passing, Says Laird

London, presiding at the annual meeting of the Scottish Sabbath Protection Association in Glasgow recently, Sir Archibald Campbell, of Strathgairn, stated that there was a tremendous tide setting in against the observance of the Lord's Day. The chief offenders, he said, were those who could get their pleasure on almost every day of the week.

The Rev. David Watson, moving resolution to the effect that meetings opposed everything that would destroy the sacredness and rest of the Sabbath Day, said that the railway companies, by offering cheap fares than ordinary fares, invited the people to travel and secularize the Sabbath. There also existed a municipal menace. Why did their civic fathers bow to lure the people to golf and bowls? In reference to excursionists, he stated that he could give many instances where at the suggestion of the Roman Catholic Church, special excursion trains had been run on the Sabbath Day.

REVERENCE

The more a naturalist studies Nature and many mysteries, the he comes to him. "So God grows more sublime and awful as we labor for Him in the tasks which He has set us," says Phillips Brooks. "Would you grow rich in reverence? He asks: 'Go work, work with all your strength, so let life deepen around you and display its greatness.'"

Health Education

In the present state of knowledge of the masses, government and upon voluntary workers to educate a progressive policy. The general body of the population have not sufficient knowledge and vision to insist upon medical and sanitary measures which will improve health and prosperity. Fortunately, the Governor has indicated that, in spite of the financial stress of the moment, Government will strive to maintain continuity of progress in its medical policy. Expenditure on medical and sanitary services will wish to reduce.

One reads frequent accounts of women coming to the front in almost every field of work. Can it be that they are tired of merely being the power behind the throne, and have decided to be queens in their own right?

There is Music Everywhere

There rolls thro' every noising street, The thrill of an epic hymn, The sounding stream of human feet Moves on to music's perfect time.

In every silence there are chords, Subtle and soft as strands of rain; By sounds, akin to song, or word— From from the lips, a varied strain.

The soul that tunes the perfect car, Dissolves all discord into air, And in the heart of things can hear Nothing but music everywhere.

—J.C.M.D.

Save the Birds

Cape Argus: Let us, before it is too late, do all we can to preserve the wonderful bird life of our country. The preservation of songbirds and the teaching of school children to protect rather than destroy. Let us distribute literature in schools and at farmers on the economic value of birds. Why is there not a Club of Ornithology in all our universities?

Instead of rushing into jail with ill-considered judgments on the welfare of the British Empire, we prefer to wait until we can read the whole truth in the Moscow Pravda and Pravda.

A young hoodlum known for his determination never to be overruled was going at great speed on his bicycle when he heard an insistent "honking" behind him. He turned and saw just on his hind wheels, a baby car driven by a wild-looking individual. Both he turned to the right, down the road, the accelerator pedal, and he rushed the speed indicator. Seventy—eighty miles an hour were touched, but still the hoodlum continued. At last, worn out, the speed maniac slowed down and drew to the side of the road. "Come on, then, if you must pass," he cried. "I'm sorry," said the driver of the baby car. "I had hooked on."

Volcano, Quakes Alarm Planters in Costa Rica

Ash Eruptions from Irazu Mild Earth Tremors felt Throughout Republic

Saint Jose, Costa Rica—Residents of San Jose and other small cities which lie at the foot of the volcano Irazu, as well as coffee planters and farmers who live on its slopes are greatly alarmed by recent eruptions of ash from the crater of Costa Rica's most active volcano, and mild earthquakes which have been felt in practically the entire republic.

It is believed, ash caused by Irazu. The volcano rises to a height of 11,500 feet above sea level, and three craters, two of which are active. The third, although less than a mile from the main crater, has a diameter of 1,500 feet and contains a small lake fed by rainfall and water draining from the crater.

The craters of Irazu can be seen only by a telescope. One of the craters is situated on the slope of the mountain for a distance of approximately 10 miles. One can see practically the whole of the republic from the crater.

San Jose, the capital, is situated on the Pacific coast, and the Irazu volcano, which is the boundary between Costa Rica and Nicaragua, and a number of lakes in the neighboring republic is visible from the peak.

Tolls of Death in European Storm

Five Members of Crew of Finnish Schooner Are Drowned

London, efforts to counter the sea's "brought additional tales of death and misery from various parts of the world. Five members of the crew of a Finnish schooner were drowned in the North Sea during a storm on Sunday night.

The schooner, the *Finland*, was carrying a cargo of fish. The vessel was wrecked off the coast of Norway. The crew consisted of five men and the captain. The vessel was carrying a cargo of fish. The vessel was wrecked off the coast of Norway. The crew consisted of five men and the captain.

MUTT AND JEFF—By BUD FISHER

Mutt Feels a Little More Sleep Won't Hurt

Dog Stories

Years ago, when I was living in a small town in the mountains, I had a dog who was the most intelligent I had ever known. He was a black dog, but his intelligence was not in his color, but in his eyes. He was a dog who was the most intelligent I had ever known. He was a dog who was the most intelligent I had ever known.

The dog did not go to the following morning, but remained at home very miserable, and did not care about his food. On the fourth day he put his paw on the floor in front of the door, and I saw that he was trying to tell me something. I went to the door and found that the dog had been to the following morning, but remained at home very miserable, and did not care about his food.
